

Learn Better

It's time for a fundamentally better learning experience

🕒 Read 6 minutes

Even before the pandemic, education was undergoing a transformation that will go on long after the virus threat subsides. The experiences students, educators and administrators have had during the pandemic has to have accelerated and amplified trends in education that were already in motion. Online, hybrid and blended learning has revealed inequities and how many physical learning environments simply can't meet the pedagogical needs and technology demands. Additionally, wellbeing has suffered, and students and teachers have struggled, unable to teach or learn effectively.

What Students and Educators Need and Expect

Everyone has had a vastly different experience teaching and learning from home. Those experiences shape their expectations for what they want the learning experience to be like in the future.

Prior to and during the COVID-19 pandemic, Steelcase Learning researchers used multiple methods to understand the value of hybrid and blended learning and wellbeing to educational outcomes and how space can play a role to ensure an enhanced experience. Prior to COVID-19, researchers visited both K-12 schools and universities, interviewed educators and students, observed hybrid and blended learning models and built prototypes. Since the onset of the pandemic, they've used a remote diary platform to assess how online learning is going for teachers and students. Steelcase also conducted multiple studies in 10 countries to better understand the impact the pandemic has had on workers. Synthesising all these studies uncovered five overarching needs that will drive macro shifts in the overall learning and work experience and lead to new ways of planning and designing learning environments.

To Be Safe and Feel Safe

Educational institutions didn't have to consider how to mitigate the spread of disease, but people are now pandemic aware. They have new expectations about air quality, facility cleanliness, social distancing, density and adherence to safety protocols that did not exist prior to the pandemic.

A Deeper Sense of Belonging

Students, educators and administrators all report a feeling of isolation. To address this moving forward, educational institutions will need a more human-centred approach to education that creates a sense of belonging. When a sense of belonging is lacking, both educators and students are negatively impacted. Students' lack of wellbeing, for example, is related to lower achievement, retention and graduation rates, which directly affect funding. Meanwhile, educator burnout results in higher absenteeism, poor wellbeing, increased healthcare costs and higher turnover rates.

Holistic Comfort

A more holistic approach to comfort is another expectation students, educators and administrators now have as many had to learn, teach and work from sofas, kitchen tables and even beds. Learning environments will need to support physical comfort, as well as emotional and cognitive comfort. People will need a range of postures, settings and the ability to move, as well as an emotionally safe and supportive culture for teaching and learning. Learning spaces should be designed to create a sense of inclusiveness and community and provide calming spaces for respite.

Macro Shifts In The Learning Experience

To be able to create better teaching and learning experiences that provide students and educators with what they want and expect, institutions will need to pay attention to four macro shifts in how they think about space.

Design Safer Schools

Behavioural strategies, such as mask wearing and distancing, need to be augmented with changes to the built environment. Educational institutions can make their buildings even safer by intentionally designing the built environment to help mitigate disease transmission. Understanding how pathogens move through an environment will help educational institutions develop new systemic strategies to help prevent infections.

Design for Effectiveness

Students and educators have struggled throughout the pandemic. Learning and teaching effectiveness have dropped. Moving forward students and educators will need multi-modal learning environments that balance individual and group needs and multiple modes of learning. For example, libraries can be designed to support group work and not just individual study. Schools will also need to provide spaces that enable better hybrid and blended learning experiences.

Design to Inspire

People who have lived through a crisis want inspiration — they need to be a part of something meaningful. Educational institutions will need to create a sense of belonging and foster community. When students are able to connect with their instructors and have access to inspiring spaces that build a strong community, this can lead to better learning outcomes. Intentionally-designed learning environments can foster meaningful interactions and signal that change and adaptation are part of their culture and something to be embraced.

Design for Flexibility

Historically designed for permanence, buildings have been dominated by fixed architecture, power and furnishings. Going forward, educational institutions will offer more flexible environments that can adapt easily to accommodate multiple learning modes. Schools will need to embrace multi-use spaces that can support diverse types of activities. Furnishings will easily move to allow spaces to expand and contract as needed.

While living through a crisis has not been easy on anyone, it has accelerated changes that were already underway to improve the learning experience. Leaders in education can use this moment as a catalyst for reinventing learning spaces and explore new approaches for delivering quality education.

Learn Better: Explore the Design Principles in Practice

Learn about the four new design principles education leaders need to consider to create better learning spaces.

Centering Wellbeing in Education

Discover how intentionally designed learning spaces can play a role in wellbeing.

Designing for Blended Learning

As blended learning becomes a viable solution for institutions, we identify the learning spaces that need to be rethought.
