

# LINC

Steelcase | Munich

## PolyVision Product Detail

October 2018

# Purpose of Guide

Throughout the LINC facility you will find a variety of collaborative products designed to foster creativity in the workplace.

Use this as a guide to be inspired of how CeramicSteel is used in a number of ways; from standard to custom sizes that provide functional spaces that support individuals in a variety of work modes.

PolyVision CeramicSteel can be customized with imagery and printing to match endless design aesthetics and different workspace cultures.

# About PolyVision CeramicSteel

The importance of collaboration has never been greater, but people need the right tools to capture their ideas.

At PolyVision, we've combined the flatness, durability and functionality of our CeramicSteel writing surface with architectural elements resulting in products that are functional and satisfy visual expectations. The longevity, high performance and low maintenance of a<sup>3</sup> CeramicSteel contribute to its functionality in any work environment.

# Features of CeramicSteel

From frameless writing boards that promote collaboration, feature walls that display messaging and graphics, to architectural cladding for interiors and exteriors, a<sup>3</sup> CeramicSteel has the power to enhance the functionality and aesthetics of any environment.

Combining the best qualities of porcelain and steel, PolyVision a<sup>3</sup> CeramicSteel is unmatched in the industry. Strong, consistent and enduring, it will neither scratch nor corrode. It refuses stains, is bacteria resistant and colorfast. As a result, cleaning is easier, maintenance is minimal and life cycle costs are dramatically reduced.

# Contacts + Ordering

Contact our sales team to find out more about architectural cladding options and writing surfaces.
