The Walkstation.

There’s a new movement afoot.

Well-being has no time clock. It can be welcomed into every aspect of our lives. Including work.
Simply by standing, you burn three times as many calories as you do sitting. Muscle contractions, including the ones required for standing, seem to trigger important processes related to the breakdown of fats and sugars. When you sit down, muscle contractions cease and these processes stall.” Dr James Levine

The Walkstation…a step in the right direction.

What is the Walkstation?
Designed for the office environment, Walkstation is the premier product of the FitWork category of products from Details/Steelcase. FitWork focus is to bring healthy workstation options to the workplace to counter the risks associated with sedentary behaviors.

Benefits of using the Walkstation in the workplace
Walkstation is a valuable asset for use in combating the risks and costs associated with long periods of sedentary behaviors. Used as one part of a company’s wellness initiatives, the product encourages employees to consider alternative healthy postures and choices leading to a healthier workforce and control of healthcare expenditures for the company and employees.

How much sitting is too much in a single session?

What is the most important venue for addressing sedentary behaviors?

Data from informal poll of attendees of “The Science of Sedentary Behavior” conference sponsored by Standford Center on Longevity and Steelcase Inc., July 2010
Case Study Highlights

An Office That Moves Together Loses Together

The plan:
• Adding Walkstation’s and walking tracks
• Encouraging workers to conduct walking meetings
• Providing high-tech activity monitors
• Teaching workers about nutrition

The participants:
• 18 were studied for weight loss and other changes

The results:
• Lost an average of 8.8 pounds, 90 percent of which was fat
• Decreased their triglyceride levels an average of 37 percent
• Company officials reported no productivity loss and the company's highest-ever monthly revenue in January 2008, the study’s midpoint

“We find our employees to be as productive or more productive using the Walkstations. They keep focused and the energy is great. We recorded our largest quarter in the history of our company when we started using the Walkstations.”

Physiologists and microbiologists find link between too much sitting and poor health

The Initial Study: N.E.A.T.™
The initial clinical study conducted by Dr. James Levine spanned 10 years and included following 20 individuals as they went about their normal work, recreation, rest and life routines.
Conclusion: Even trivial physical activities increase metabolic rate substantially. The cumulative impact of increasing the metabolic rate through added daily movement that can help interrupt or reverse weight gain which is a known lead to many other health challenges.

Surprising Results About Body Composition
How might the Walkstation use influenced body composition?
Results: Workers using the Walkstation over a 12 month period experienced some reduction in body weight, but more importantly lost fat weight while maintaining and even increasing their percentage of lean tissue (muscle mass). The alterations in body composition and reduction in waist circumference reflected an improvement in health profile even more than the subjects' weight loss.
