

Answer Solutions Specification Guide

Availability

Electronic price list updated with release 188.C (U.S.) and 150.C (Canada), dated October 15, 2018.

Spec News is available on village.steelcase.com. Search Steelcase Marketing Resources (Adstock) and download the current release's Spec News.

Tip: Steelcase Marketing Resources is a new global platform for ordering Steelcase marketing materials that replaces Adstock.

View or download Steelcase Specification Guides at [https://www.steelcase.com/resources/documents?tax-\[doctype\]=spec-guide](https://www.steelcase.com/resources/documents?tax-[doctype]=spec-guide).

Transitional products in this specification guide are **maintained for existing customers only** and are likely to be phased out over time. These products are indicated with a . Products that are scheduled to be culled are indicated with an , followed by the last order entry date.

Surface Materials

The surface materials team has announced the launch of the Finish Library, found at <http://finishlibrary.steelcase.com>.

► For a list of all trademarks, refer to the last page of this specification guide.

© 2018 Steelcase Inc.

For Canadian Pricing

Canadian factor can be found at steelcase.com/CADpricing.

Calculate in the following order to avoid rounding errors:

- Multiply the base price and each option by the Canadian factor.
- Round each to the nearest dollar.
- Add base and options for total list price.

This specification guide contains multiple Steelcase and turnstone product lines which are designed into one specification guide for your convenience. Note that each product may be subject to different pricing terms and conditions.

Ten Tips: How to Get the Most Out of This Book

Tip 1

Watch the tabs on the right-hand edges of the pages. They'll always indicate which chapter you are in.

Tip 2

Use the Statement of Line pages for an overview of the available components, their sizes, and page references for additional information. Each *Understanding* chapter includes a statement of line after the table of contents.

Tip 3

Find cross references by looking for page numbers flagged with an arrow.

Tip 4

Study the product detail pages in the *Understanding* section to learn everything an expert knows about specific products. Each product detail page in this section contains the following features, where applicable:

- Product Drawing
- Actual Dimensions
- Product Details
- Connections
- Wiring and Cabling
- Surface Materials
- Application Topics

Product Drawing

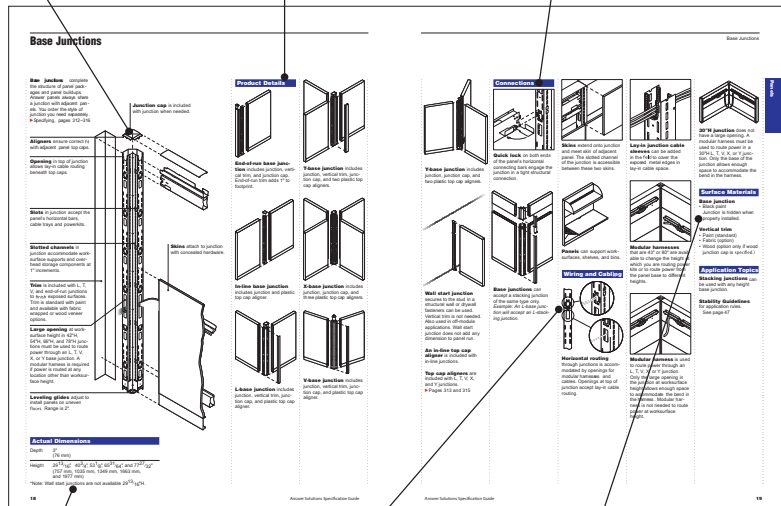

shows you what the product looks like and points out important features.

Product Details

gives specific information on the product and how it is used.

Connections

describes how the product is assembled or how it attaches to another product.

Actual Dimensions table lists the dimensions of the product.

Wiring and Cabling details the power and cable-management and cable routing capabilities of the product.

Surface Materials lists what material is used for each part of the product.

Tip 5

Refer to the specifying pages for all the information needed to order a product. Each product specifying page contains a variety of elements to help you complete a specification:

- Product Drawing
- Standard Includes
- Required to Specify
- Options
- Related Products
- Specification Information
 - Dimensions
 - Style Number
 - Price

Standard Includes (under the red or dark grey band) provides a list of what comes standard with the product.

Required to Specify (under the red or dark grey band) itemizes the information that you must provide to order the standard product and the preferred sequence for specification.

Specification Information (under the teal or light grey band) provides product dimensions, style numbers, and prices for the standard product and any surface material choices that are available.

Product Drawing shows you what the product looks like.

Options (under the black band) lists all the options that apply to the product, their price, and what is required to specify.

Related Products provide specification information for products that are directly related.

Tip 6

Required to Specify

Specify with *Customiz Stain*

Italic typeface on specifying pages usually identifies wording that you should use in your order.

i

Tip 7

To determine how many skins are needed to complete a panel, consult the table at the right.
Tip: Remember to order skins for both sides of the panel buildup.

Watch for tips throughout the text that give you explanations and helpful instructions.

Tip 8

Learn what you cannot do by looking for drawings crossed out with an "X."

Tip 9

Use the surface materials listings in the Surface Materials section of this book to find surface material color numbers.

Tip 10

Style Number	Page
TS7042BL	131
TS7042S	130
TS7048BL	131
TS7048S	130
TS7060BL	131
TS7060S	130
TS7072BL	131

Refer to the style number index when you know a style number and you need to find the page that has more details about the product.

Additional Resources

Answer is supported with an array of informational materials, tools, and software to help you plan an installation efficiently.

Product brochures and planning tools can be ordered through your Steelcase area office by calling 1.800.784.0358 or through the Marketing Resources web site at village.steelcase.com.

This specification guide contains multiple Steelcase and turnstone product lines which are designed into one specification guide for your convenience. Note that each product may be subject to different pricing terms and conditions.

Additional storage products can be found in the *Storage Specification Guide*.

Refer to the *turnstone Furniture Specification Guide* for the Understanding turnstone information.

Printed Materials

Answer Product Brochure

This resource is your single source for everything you need to sell Answer. It contains photography showcasing a range of aesthetic and planning options. A complete statement of line, which highlights work surfaces and storage options, also is included.

Form number 11-0002374

turnstone Furniture Specification Guide

contains Kick products and storage that complement Answer contains Kick products, TS Series work surfaces, and TS Series storage that complement Answer.

Storage Specification Guide

contains storage that attaches to Answer and the full offering of large case storage for use outside of workstations.

Answer Freestanding Specification Guide

contains lighting, wall-mount storage, screens, and wire management products.

Quick Ship Guide

This handbook describes all Steelcase, turnstone, and Coalesse products that are available for Rapid2 (ships in 2 days), Rapid5 (ships in 5-7 days), or Coalesse Rapid10 (ships in 10 days).

Surface Materials Reference Manual

This publication provides:

- An explanation of the surface materials
- "Available on" matrices
- Vertical surface fabric and seating upholstery selection listing
- Technical data for surface materials
- Surface material care and cleaning instructions

Computer Tools

Electronic Catalog

Accurate sales quotations and purchase orders for Steelcase products are created with specification software that uses Steelcase Electronic Catalog data. Use the data to specify and price style numbers and options for every Steelcase product. The data is updated bimonthly by Steelcase and provided to software programs including: the Hedberg Business System, SmartTools – Steelcase's design and specification software (for more information on SmartTools, please email SmartTools@steelcase.com), the ProjectMatrix Project-Symbols libraries, as well as 20-20 CAP Studio.

Furniture Symbol Graphic Data

Steelcase creates 2D and 3D furniture symbols (with attributes) for planning and initially specifying Steelcase products. This data is incorporated into several add-on software packages that work in either a Microstation or an AutoCAD drafting environment.

Digital Publications

You can access these digital publications at www.steelcase.com or village.steelcase.com.

Answer Product Training

Basic training for Answer and many other Steelcase products is available as part of the Building Product Muscle curriculum on the Steelcase University Web site at village.steelcase.com.

The Answer BPM web-based module is an interactive course filled with pictures, product detail, and practice exercises designed to build knowledge of Answer's positioning, statement of line, features and benefits, competitive products, application, and sales presentation. It also provides printable job aids of all content covered in the course to serve as ongoing performance support for Steelcase and dealer salespeople. The Answer BPM is course SAL140.

Planning Ideas

Planning ideas are available to help inspire, envision, and plan great solutions. 2D and 3D AutoCAD drawings, Sketch-Up files, and SmartTools drawings are available on the Planning Ideas site: www.steelcase.com/planningideas.

Support

Steelcase Capabilities

Steelcase products are distributed, installed, and serviced through a network of more than 600 dealers worldwide. Steelcase is also represented with offices and corporate showrooms in 26 U.S. cities, 4 Canadian cities, and in France, Germany, Great Britain, and Japan. Every Steelcase product meets our exceptionally high standards of quality and durability and comes with the Steelcase assurance of excellence in service.

For assistance, call your local dealer, the Steelcase Solutions Resource Team, or the Steelcase Solutions Fulfillment Team at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Call the Steelcase Solutions Resource Team prior to placing an order, when working on a bid, or when you need information about product applications and specifications.

Call the Steelcase Solutions Fulfillment Team if you have submitted an order to Steelcase and you need to speak to your Solutions Fulfillment Team Representative about the order. Also call if you have any post-shipment quality concerns or service parts questions.

For warranty information, please go to <http://www.steelcase.com/warranty/>.

Outside the U.S.A., Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands, call 1.616.247.2500.

Related Products

Worktools include a full line of ergonomically designed products that enhances and improves the work setting. Product platforms include computer support tools, organizational worktools, and personal lighting.

► For additional information, refer to *Steelcase Worktools Specification Guide* or contact Steelcase at 1.888.STEELCASE (1.888.783.3522) or send an email to lineone@steelcase.com.

Height-adjustable desks include a full line of crank, counterbalance, and electric height-adjustable desks which promote well-being in the office.

► For additional information, refer to *Height-Adjustable Desks Specification Guide* or call 1.888.STEELCASE or send an email to lineone@steelcase.com.

Answer Assembly Tool

As an alternative to using a rubber mallet, frames can be assembled using the Answer Assembly Tool.

Call Steelcase for pricing and order information. 1.888.STEELCASE (1.888.783.3522) or send an email to lineone@steelcase.com.

Tip: Primary and return screens may be specified with equal or unequal widths.

Answer Panel Overview—Thin Trim

Thin, square, and oval trim styles are available on Answer panels. Trim styles are not compatible with each other. Applications must use one consistent trim style.

Panel buildups allow you to create unique configurations by mixing surface materials and colors on segmented panels. Order skins and horizontal frame packages separately.

Panel frame is made up of two major elements—vertical base junctions and base horizontal connecting bars.

Stacking components can be used on both panel buildups and panel packages.

Panel packages are used to create common configurations quickly and easily. Packages include a horizontal frame package and skins for both sides of the panel.

Stacking junctions do not come with trim. Vertical trim must be ordered separately to cover any exposed junctions.
▶ Page 30

Stacking horizontal frame package must be used with stacking junctions.
▶ Page 60

Stacking junctions can be used in panel buildups and panel packages. They are available for in-line, L, T, X, V, Y, and end-of-run configurations.
▶ Page 30

Skins attach to frame without tools and can be removed and repositioned easily.
▶ Page 121

Base junctions are always shared by adjacent panels. They are available for in-line, L, T, X, V, Y, and end-of-run configurations. Wall-start junctions and off-module connectors are also available.
▶ Page 18

Base trims or open base trim styles are available on panels with Thin trim style.

Base horizontal connecting bars lock into the vertical junctions at the top and the bottom location of base junction to provide structural stability for the panels.

Powerkits include powerblocks attached to a supporting power tray.
▶ Page 182

Thin end-of-run trim has an integral finished end.

Alternate powerkit harness routing can be accommodated through the junction opening. In in-line applications installed on uneven floors, route harness through junction opening to prevent harness from being exposed.

Leveling glides adjust to install panels on uneven floors. Range is 2³/₄".

Actual Dimensions

Height 29¹/₂", 41⁷/₈", 48¹/₁₆", 54¹/₄", 66¹⁹/₃₂", and 78³¹/₃₂"

Note: Height is minimum from floor to top of top caps. Leveling glides can extend 2³/₄".

Panel Buildups

Order panel components separately to create unique configurations.

1. Begin by planning your frames. Junctions determine height and horizontal connecting bars determine width.

1a. Corner junctions can easily be reconfigured by adding or removing a junction post (available on junctions shipped on or after October 10, 2011).

2. Order skins for both sides of panel.
Exception: Windows accommodate both sides of the panel.

Performance tackable acoustical fabric-covered skins

Tackable acoustical fabric-covered skins

Steel skins (12"H, 18"H, and 24"H have ribbed and perforated options)

Laminate skins

Wood skins

Tip: Wood skin sets are available for 42", 48", 54", and 66" panel heights.

Back painted glass skins

Markerboard skins

Slatwall

Windows

Technology skins

Answer allows a wide variety of skin arrangements to meet specific functional and aesthetic needs. Skins are not dedicated to a specific location and can be used anywhere on the face of the panel.

2. Order skins for both sides of panel, continued

When specifying skins, the total skin height will be 6" less than the overall panel height. For example, if the panel is 66"H the total skin height will be 60".

When planning skin segments, add skin heights together and add an additional 6" for total height.

Skins = 12" + 12" + 36" = 60"

Trim = 6"

Total = 66"H

Skins to the floor are available in fabric, steel, laminate, wood, or wood skin sets. Skins to the floor also plan 6" shorter than the height of the panel, but are taller in actual height to cover the base trim area of the panel. For example, a 54"H panel with to the floor skins would require a 48" skin with suffix "F", which would be approximately 53"H actual dimension.

Tip: Omit base trim option should be selected on the frame package when using a skin to the floor.

Panel Height	Total Standard Skin Height	Style Number	Total Skin To The Floor Height	Style Number

3. Specify powerkits where you will need power.

Base Junctions—Thin Trim

Base junctions complete the structure of panel packages and panel buildups. Answer panels always share a junction with adjacent panels. You order the style of junction you need separately. ▶ Specifying thin, page 340.

Thin trim require end-of-run and change-of-height junctions manufactured on or after October 10, 2011.

Corner junction cap aligners ensure correct fit with adjacent panel top caps.

Opening in top of junction allows lay-in cable routing beneath top caps.

Slots in junction accept the panel's horizontal bars every 12", cable trays every 6", and powerkits every 12" vertically.

Slotted channels in junction accommodate worksurface supports and overhead storage components at 1" increments.

Trim is included with L, T, V, and end-of-run junctions to finish exposed surfaces. Trim is available with paint or wood veneer.

Large openings are used to route power or cables through an L, T, X, V, Y, and in-line base junction.

Leveling glides adjust to install panels on uneven floors. Range is 2³/₄".

Inside corner light seals are only needed in 90° applications and are included in the style number when ordering.

Junction cap and appropriate aligners are included with junction when needed.

Skins attach to junction with concealed hardware.

Block and post construction allows the ability to add or remove posts on corner junction for easy configuration.

Lay-in cable routing is accommodated in base area.

Product Details

Answer is available with three styles of trim - square, oval, and thin. This section covers Thin trims. Base junctions are specified with desired style. Styles can not be mixed between adjacent panels.

▶ For square and oval trims, see page 81.

End-of-run base junction includes junction, vertical trim, and trim aligner. Select thin style trim. End-of-run trim adds 1/2" to footprint.

In-line base junction includes junction and plastic top cap aligner. Select thin style trim.

Actual Dimensions

Depth 3"

Height 28⁷/₁₆", * 40³/₄", 47", 53¹/₈", 65¹/₂", and 77³/₈"

*Note: Wall-start junctions are not available 28⁷/₁₆".

L same height base junction includes junction, inside corner light seal(s), vertical trim, junction cap, and two plastic top cap aligners. Select thin style trim.

V same height base junction includes junction, vertical trim, junction cap, and plastic top cap aligner. Select thin style trim.

T same height base junction includes junction, inside corner light seal(s), vertical trim, junction cap, and three plastic top cap aligners. Select thin style trim.

Y same height base junction includes junction, junction cap, and two plastic top cap aligners. Select thin style trim.

X same height base junction includes junction, inside corner light seal(s), junction cap, and four plastic top cap aligners. Select thin style trim.

Most change-of-height junction configurations are pre-configured and include junctions and needed trims. Change-of-height junctions that are not pre-configured are available through the build your own process. ▶ See specification information, page 370.

Wall-start junction secures to the stud in a structural wall or drywall fasteners can be used. Vertical trim is not needed. Also used in off-module applications. Wall-start junction adds $\frac{3}{16}$ " dimension to panel run.

An in-line top cap aligner is included with in-line junctions. Select thin style.

Top cap aligners are included with end-of-run, L, T, X, V, and Y junctions.

Posts can be added or removed from corner junctions to change from one corner to another.

Connections

Block and post construction of corner junctions allow junctions to be easily added or removed to configure between L, T, X, V, or Y in an application.

Quick lock on both ends of the panel's horizontal connecting bars engage the junction in a tight structural connection.

Base junctions can accept a stacking junction. Omit trim option should be selected whenever stacking. Omitting trim removes all vertical trim, junction cap, and aligner(s). Remember to specify vertical trim, junction cap, inside corner light seal(s), and aligners separately. ▶ See page 370.

Floor anchor brackets are available to secure junctions to the floor to prevent panel movement. Brackets are intended for use in seismic zones and may require additional code approvals.

Junction stabilizer bracket can be used to add rigidity to a panel run or when using a Universal sliding door. Bracket must be bolted to a concrete floor. For junctions manufactured before October 10, 2011 use TS7SB. For junctions manufactured on or after October 10, 2011 use TS7SBNJ.

Bracket foot is visible on one side of panel when installed.

Junction stabilizer bracket blocks power routing in the panel base and just above the base areas. The bracket covers the slots on the junction where the powerkit connects in these two zones. It also blocks the ability for a powerkit harness, pass-through powerkit, or modular harness to route in the base area from an adjacent panel.

Junction stabilizer bracket also blocks lay in of cables in base area of panel.

Base Junctions—Thin Trim, continued

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Panels can support work-surfaces, shelves, and bins.

Wiring and Cabling

Lay-in cable routing at top of panel

Lay-in cable routing at base of panel

Lay-in cable routing is accommodated in the top of junctions. Lay-in cable and power routing is accommodated in base area.

As an alternative to lay-in cable routing, horizontal routing of power and cables can be accommodated through openings in junctions.

Junction tall sleeves can be ordered to cover the exposed metal edges in the large cable routing opening of junctions. Tall junction sleeve can only be used on junctions manufactured on or after October 10, 2011.

Lay-in junction cable sleeves can be added in the field to cover the exposed metal edges in lay-in cable space.

Modular harnesses that are 43" or 80" are available to change the height at which you are routing power kits or to route power from the panel base to different heights.

Carpet gripper glide caps may be added to panel glides to help hold panel in place (used only on junctions manufactured on or after October 10, 2011).

Surface Materials

Base junction

- Black paint
- Tip: Junction is hidden when properly installed.

Junction cap—thin

- Paint
- Wood

Vertical trim—thin

- Paint
- Wood

Painted style numbers

include all painted trim and wood style numbers include all wood trim. It is not recommended to mix painted and wood trim. Wood trim is slightly thicker as a result of adding veneer so some misalignment between elements may result.

Tip: Answer panel wood trims are only available with quarter-cut finishes with the exception of maple finishes. Maple on wood trims is only available with flat-cut finishes. For ordering simplicity, both flat-cut and quarter-cut finishes can be specified on panel trims. However, for all finishes except maple, if a flat-cut finish is selected, the trims will have the coordinating quarter-cut finish. For maple finishes, if quarter-cut is selected, the trims will have the coordinating flat-cut finish. Blending panel trims with other wood products that have flat-cut finishes will be visually acceptable for most applications. If a more exact match is desired for non-maple finishes, please specify quarter-cut finishes for the entire project. If a more exact match is desired for maple finishes, please specify flat-cut finishes for the entire project.

Application Topics

Stacking junctions

can be used with any height base junction.

Stability Guidelines

for application rules.
▶ See page 142

Change-of-Height—Thin Trim

Change-of-height trim

is available for base panels and stacking panels. It is used in in-line and corner applications.

► Specifying thin, page 345.

Note: Change-of-height trims are available in 6"H, 12"H, 18"H, 24"H, 30"H, and 36"H.

Change-of-height (two different panel heights) L, T, X, V, and Y junctions

are supported by style numbers in the following pages. Change-of-height (three different panel heights) T, X, and Y and change-of-height (four different panel heights) X junctions are not supported by style numbers and will need to be specified in the build your own section.

► See page 34 for understanding.

► See page 370 for specifying.

Note: Change-of-height junctions include the necessary change-of-height trim (including junction cap and aligners) for the change-of-height portion. See the following pages for panel height change-of-height applications (two different panel heights) and what is included in each style number.

Change-of-height junctions are shipped assembled. L, V, and some T junctions are handed. A post may have to be moved during installation to achieve the proper "hand".

90° Planning Application

An end-of-run aligner is included with the end-of-run change-of-height trim to provide tight alignment between the top cap and the change-of-height trim. No junction cap is required.

End-of-run change-of-height trim is used at end-of-run or in-line change-of-height. The top of the trim aligns with the top cap on the panel.

90° Planning Application

L corner change-of-height trim is used in a T or X change-of-height application when there are two panels at the tallest height located adjacent to each other. No aligners are required to connect the L corner change-of-height trim to the junction cap.

T vertical trim is used to finish trimming out the base of the panel. Base panel trim is included when specifying the change-of-height junction.

An L to T aligner should be specified when an L corner change-of-height trim resides directly above a T trim in a change-of-height application. The L to T aligner creates a tight connection between the two trim pieces.

Actual Dimensions

Depth	3"
Height	6 ³ / ₁₆ ", 12 ⁵ / ₃₂ ", 18 ¹ / ₂ ", 24 ¹ / ₂ ", 30 ⁷ / ₈ ", and 36 ⁷ / ₈ "

An L to T aligner must be specified if an L change-of-height trim is located directly above a T.

No aligners are required to connect a T corner change-of-height trim to the junction cap or top cap.

T corner change-of-height trim is used in T or X change-of-height applications where there are two panels at the same height located in-line with each other.

90° Planning Application

120° Planning Application

120° corner change-of-height trim is used in a V or Y change-of-height application when there is only one panel at the tallest height. No aligners are required to connect the trim to the junction cap or top cap.

120° to V aligner should be specified when a 120° corner change-of-height trim resides directly above a V trim. The 120° to V aligner creates a tight connection between the two trim pieces.

V corner change-of-height trim is used in a Y change-of-height application when there are two panels at the tallest height. No aligners are required to connect the trim to the junction cap or top cap.

Surface Materials

Change-of-height trim

- Paint
- Wood veneer

Junction cap

- Paint
- Wood veneer

Aligner

- Black plastic only

Application Topics

Change-of-height top cap option must be specified on the lower panel of in-line applications.

Tip: Change-of-height top cap option is only needed when using in-line change-of-height.

Thin trim top caps have a notch in one or both ends to accommodate in-line change-of-height applications.

Specify an in-line change-of-height junction to connect panels. In this application the in-line change-of-height junction includes a 42" high in-line base junction with a 24" end-of-run stacker. A horizontal stacking beam is required when using an in-line change-of-height junction to support the stacker.

Specify change-of-height top caps at one end unless the panel is adjacent to taller panels on both sides. Then specify a top cap change-of-height on both ends.

Change-of-Height Visual Overview—Thin Trim

Selecting a Junction

To determine the application you need, follow these steps:

1. Find the type of junction you are constructing – L, T, X, V, Y, or in-line. An array of the applications that are supported by style numbers are shown on the following pages. All same height corner junctions are supported by style numbers on pages 341-344. All change-of-height applications (with two different heights) are included on the following pages. If your application is not included (three heights in an T, X, or Y junction or four heights in an X junction) please see *Build Your Own—Thin Trim*, page 39, to build your desired application.
2. It may help if you make a sketch of the junction you are trying to build and then match it with the junction shown on the following pages.
3. Find the type of junction you are looking for in the following pages and see the corresponding specifying page.

Style numbers for junctions are based on the heights of the frames.

Digit in Style Number	Corresponding Frame Height
3	30"
4	42"

Off-Module Panel Connector—Thin Trim

Off-module panel connectors allow a fin wall to be attached off-module to a spine wall in 1" increments.

► Specifying, page 358

Top brackets attach to top horizontal connecting beam and secure top of the wall-start junction. If fin wall is 12", 18", or 24" shorter than spine wall, the top horizontal connecting bar can be lowered to attach brackets.

Wall-start junction must be ordered separately.

Bottom bracket attaches to lower horizontal connecting beam and secures to lower portion of bottom channel.

Bottom channel has slots in 1" increments to attach panel off-module. Channel must match width of panel and be attached between two junctions.

Bottom bracket for wall-start junction attaches the junction and bottom channel to secure the lower portion of the wall-start junction.

Product Details

Wall-start junctions connect to the off-module panel connectors to start a panel run off from the spine. Available in 42"H, 48"H, 54"H, 66"H, and 78"H. Wall-start junction must match the height of the fin wall. Wall-start junctions are ordered separately.

Connections

Off-module fin wall must always be the same height or shorter than the spine wall.

When fin wall is more than 24" shorter than the spine wall an additional horizontal beam must be added to the spine wall at the same height as the fin wall. Order a stacking horizontal frame kit.

Spine wall skins must be segmented with a seam matching the height of the shorter fin wall. This allows access to the top bracket and the spine wall horizontal beam.

Actual Dimensions

Width 22¹/₂", 34¹/₂", 40¹/₂", 46¹/₂", 58¹/₂", and 70¹/₂"

When stacking on the fin panel, the spine wall skins must be segmented with a seam matching the height of the fin base panel.

When stacking wall-start junctions in an off-module application, the off-module panel connector connects to the base wall-start junction.

Two off-module panels can be connected back to back at the same location.

When attaching a 48"H panel to a 66"H in an off-module application, the 66"H must be a 48"H and 18"H stacker.

When connecting two off-module fins at different heights on either side of the spine panel, an additional horizontal beam must be ordered and installed at the same height of the shorter fin panel.

An off-module fin wall cannot connect flush to the end of a panel in the spine wall. The closest connection point will leave a 2 1/2" tail on the spine including the end-of-run trim.

An off-module fin wall cannot attach at a junction in the spine wall. There is a 2" area of dead space on either side of the junction rendering a total of 4" dead space.

An off-module fin wall cannot be installed over a window that is located at the top of a spine panel.

An off-module connector cannot be used on a spine wall with open base trim.

A fin panel connected off-module can have open base trim.

Wiring & Cabling

Wiring and cabling components cannot be routed internally from a spine wall to an off-module fin wall without cutting openings in the spine wall skin. *Tip: It is recommended that you route wiring and cabling through the spine wall.*

Internode power components should be used to bring power from the spine wall to the workstation. *► See Context Specification Guide.*

Surface Materials

Off-module bracket

- Black paint
- Tip: Bracket is hidden when properly installed.*

Off-module installation requires field modification of the light seal on the top skin. Surface covering is not affected.

Application Topics

Stability Guidelines for Application Rules

► Page 142

Stacking junctions can be used with any height base junction.

Bins, shelves, and work surfaces cannot be attached off-module.

Off-module panel connector works with Thin trims. Thin style trims do not require a top cap filler.

When using a wall-start junction manufactured before October 10, 2011 with an off module panel connector manufactured on or after October 10, 2011 the "old" bottom bracket must be used. It can be ordered from Service Parts, part number TS500938MP. If using an old off-module panel connector manufactured before October 10, 2011 with a wall-start junction manufactured on or after October 10, 2011 the bottom bracket included with the off module panel connector should be used.

When using frameless glass with clip attachment on a spine panel, with a same height off-module panel connection, the off-module cannot connect within 10" of an end-of-run or in-line junction connection.

Recessed frameless glass cannot be used on a spine panel hosting the same height off-module connection. The off-module fin panel can use recessed frameless glass, but must have the wallstart option specified.

Stacking Junctions—Thin Trim

Stacking junctions allow you to adjust the panel heights within a workstation.
 ▶ Specifying thin, page 359

Stacking junctions are available for in-line, L, T, X, V, Y, end-of-run, and wall-start configurations.

Stacking horizontal frame package, specified separately, must be used with stacking junctions. Each package includes one horizontal connecting bar.

When stacking, omit base junction trim and specify full height (base height plus stacking height) vertical trim, inside corner light seal(s) (90° applications only), junction cap, and aligners separately.

Fork connectors are included with stacking junction for proper connection to the base panel.

Top cap from base panel is used to trim the panel.

Same height stacking corner junction posts and block come plant assembled in a designated L, T, X, V, or Y configuration.

Slots in stacking junctions are identical to base junctions to accept horizontal connecting bars, power-kits, and cable trays.

Cables can be laid into top of base panel. During initial installation, it is important to keep cabling loose so it can be temporarily moved aside to install stacking fork connector at a later date.

Base panel must always have two horizontal connecting bars. The bars must be in place prior to adding fork connectors into the junction.

Product Details

All existing base panels can accept a stacking junction.

Stacking junctions do not include any trim. The omit trim option should be specified on base junctions when stacking. All vertical trim, junction caps, and aligners are specified separately when stacking on base junction.

End-of-run stacking junction includes junction and fork connector. Full height trim must be specified separately. End-of-run trim adds 1/2" to footprint.

Actual Dimensions

Depth	3"
Height	6 ³ / ₁₆ ", 12 ³ / ₈ ", 18 ¹ / ₂ ", and 24 ³ / ₄ "

In-line stacking junction includes junction and fork connectors.

L-stacking junction includes junction and fork connectors. Full height trim, inside corner light seal(s), junction cap and aligner(s) must be specified separately.

T-stacking junction includes junction and fork connectors. Full height trim, inside corner light seal(s), junction cap and aligner(s) must be specified separately.

X-stacking junction includes junction and fork connectors.

V-stacking junction includes junction and fork connectors. Full height trim, inside corner light seal(s), junction cap and aligner(s) must be specified separately.

Y-stacking junction includes junction and fork connectors.

Full height vertical trim is available in the specifying section in 30", 42", 48", 54", 60", 66", 72", 78", 84", and 90".
▶ Specifying thin, page 364.

Standard skins, cable trays, and powerkits are used in stackable solutions. To maximize the benefits of stackability, consider matching the skin height to the stacking junction height.

Connections

Skins on base panel do not need to be removed to install a stacking junction in most cases.

Fork connector is included with stacking junction for proper connection to the base panel. Two fork connectors are included with in-line, L, and V stacking junctions, three are included with T and Y stacking junctions, and four are included with X stacking junctions. One fork connector is included with each wall-start stacking junction and end-of-run.

Fork connectors secure into the base junction. Stacking junction is bolted to fork connectors.

Wiring & Cabling

Junction tall sleeves can be ordered to cover the exposed metal edges in the large cable routing opening of the junctions manufactured on or after October 10, 2011.

Horizontal routing of power and cables can be accommodated through openings in stacking junctions.

Power and data cables cannot route through the joint, the top of base panel and bottom of 6"H stacker interfere.

Powerkit installation for stacking components is the same process as for installation in base panels.

Stacking Junctions—Thin Trim, continued

Surface Materials

Stacking junction

- Black paint

Tip: Junction is hidden when properly installed.

Application Topics

Stacking stability

guidelines provide detailed information on applications.

▶ Page 142

Maximum height that can be stacked on a base panel is 36", consisting of one 24"H and one 12"H, or two 18"H stacking junction.

Maximum height that an Answer panel configuration can reach is 90".

Maximum number of stacking junctions that can be added to a base panel is two.

Any height base panel can be used with stacking junctions.

Bins and shelves can hang from the first stacked tier only.

Consolidation point kit cannot be used with stacking components.

When using 6"H stacking end-of-run junctions, a stacking horizontal beam is not needed.

Hanging components are not allowed on the 6"H stacking junctions.

Frameless glass, transaction tops, and top cap mounted storage cannot be mounted on a 6"H stacking junction.

12"H slatwall skin cannot be placed on the top of the 6"H stacking junction.

6"H stacking junction can be placed only on base junction. It cannot be used on top of another stacking junction.

Build Your Own Elements—Thin Trim

Junction Posts

► Specifying, page 370

Product Details

Junction posts are available in 30"H, 42"H, 48"H, 54"H, 66"H, and 78"H and can be ordered separately for use in building change-of-height junctions that are not supported by style numbers.

Junction posts do not come with trim. All trim must be specified separately.

Junction posts can be fastened to 90° corner or 120° corner junction blocks. Posts can be easily added or removed from the junction blocks to reconfigure the application.

Fasteners are included with the junction blocks. For additional fasteners order part number T521882MP (quantity 50).

Surface Materials

- Black paint only

Junction Blocks

► Specifying, page 371

Product Details

90° corner and 120° corner junction blocks can be ordered separately for use in building change-of-height junctions that are not supported by style numbers.

90° corner and 120° corner junction blocks are available in packages of three, four, or five.

Four fasteners are included with each junction block.

Junction post can be easily added or removed from junction blocks to reconfigure the application.

Surface Materials

- Black paint only

Inside Corner Light Seal

► Specifying, page 371

Product Details

Inside corner light seals are available in 54"H, 66"H, and 78"H and need to be specified in 90° corner junction applications (they are not required in 120° corner applications).

Inside corner light seals are available in packages of four.

Inside corner light seals should be specified to the panel in a shorter 90° change-of-height corner.

Inside corner light seals can be field cut to accommodate shorter post heights.

Surface Materials

- Black paint only

Junction Caps

► Specifying, page 372

Product Details

90° junction caps, 90° change-of-height junction caps, and 120° junction caps can be ordered separately for use in building change-of-height junctions that are not supported by style numbers.

Junction cap corner aligners (TS7CJCA10) must be ordered separately (package of 10).

90° junction caps can be used in L, T, or X applications and can be converted between applications by adding or removing a junction cap corner aligner.

120° junction caps can be used in V or Y applications and can be converted between applications by adding or removing a junction cap corner aligner.

90° change-of-height junction caps are used in some L, T, and X change-of-height junctions.

Surface Materials

- Plastic
- Wood veneer

Junction Cap Aligner

► Specifying, page 372

Product Details

Junction cap aligners need to be ordered for all corner junctions that are not supported by style numbers.

Junction cap aligners are available in packages of 10.

Junction cap aligners need to be ordered for use with 90° change-of-height caps.

Surface Materials

- Black plastic only

Vertical Trim Aligners

► Specifying, page 372

Product Details

L to T aligners and 120° to V aligners can be ordered separately for use in building change-of-height junctions that are not supported by style numbers.

Vertical trim aligners are available in packages of four.

L to T aligners are used in change-of-height applications to connect an L change-of-height trim to a T vertical trim.

120° to V aligners are used in change-of-height applications to connect a 120° change-of-height trim to a V vertical trim.

Surface Materials

- Black plastic only

Build Your Own Elements—Thin Trim, continued

End-of-Run Vertical Trim—Thin Trim

► Specifying, page 364

Product Details

Thin end-of-run vertical trim should be specified for the full height of the panel (base height plus stacking height, if stacking).

Thin end-of-run applications do not require a junction cap as the end-of-run trim connects with the panel top cap.

Vertical trim aligners to connect the end-of-run vertical trim to the top cap are included with the end-of-run vertical trim.

Thin end-of-run vertical trim can only be applied to end-of-run junctions manufactured on or after October 10, 2011.

Surface Materials

- Paint
 - Wood
- Tip: Composite veneers are not available on Answer trims.*

Actual Dimensions

Height: 28¹⁵/₁₆" , 41¹/₄" , 47⁷/₁₆" , 53⁵/₈" , 59¹³/₁₆" , 66" , 72³/₁₆" , 78³/₈" , 84⁹/₁₆" , and 90¹¹/₁₆"

L Vertical Trim—Thin Trim

► Specifying, page 365

Product Details

L vertical trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

90° junction caps and junction cap aligners are not included with L vertical trim and must be ordered separately.

Surface Materials

- Paint
 - Wood
- Tip: Composite veneers are not available on Answer trims.*

Actual Dimensions

Height: 28¹⁵/₁₆" , 41¹/₄" , 47⁷/₁₆" , 53⁵/₈" , 59¹³/₁₆" , 66" , 72³/₁₆" , 78³/₈" , 84⁹/₁₆" , and 90¹¹/₁₆"

T Vertical Trim—Thin Trim

► Specifying, page 365

Product Details

T vertical trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

90° junction caps and junction cap aligners are not included with T vertical trim and must be ordered separately.

An L to T aligner needs to be specified in applications connecting a thin L change-of-height trim to a T vertical trim.
► See page 372.

Surface Materials

- Paint
 - Wood
- Tip: Composite veneers are not available on Answer trims.*

Actual Dimensions

Height: 28¹⁵/₁₆" , 41¹/₄" , 47⁷/₁₆" , 53⁵/₈" , 59¹³/₁₆" , 66" , 72³/₁₆" , 78³/₈" , 84⁹/₁₆" , and 90¹¹/₁₆"

V Vertical Trim—Thin Trim

► Specifying, page 366

Product Details

V vertical trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

120° junction caps and junction cap aligners

are not included with V vertical trim and must be ordered separately.

A 120° to V aligner needs to be specified separately in applications connecting a thin 120° change-of-height trim to a V vertical trim.

► See page 372.

Surface Materials

- Paint
- Wood

Tip: Composite veneers are not available on Answer trims.

Actual Dimensions

Height: 28¹⁵/₁₆" , 35³/₃₂" , 41¹/₄" , 47⁷/₁₆" , 53⁵/₈" , 59¹³/₁₆" , 66" , 72³/₁₆" , 78³/₈" , 84⁹/₁₆" , and 90¹¹/₁₆"

End-of-Run/In-Line Change-of-Height Trim—Thin Trim

► Specifying, page 367

Product Details

End-of-run/in-line change-of-height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

Vertical trim aligners to connect the change-of-height end-of-run/in-line vertical trim to the top cap are included with the end-of-run vertical trim.

Thin end-of-run/in-line change-of-height trim can only be applied to junctions manufactured on or after October 10, 2011.

Surface Materials

- Paint
- Wood

Tip: Composite veneers are not available on Answer trims.

Actual Dimensions

Height: 6³/₁₆" , 12⁵/₁₆" , 18¹/₂" , 24¹/₁₆" , 30⁷/₈" , 35³/₃₂" , and 37¹/₁₆"

L Corner Change-of-Height—Thin Trim

► Specifying, page 368

Product Details

L corner change-of-height trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

An L to T aligner needs to be specified in applications connecting a thin L change-of-height trim to a T vertical trim.

► See page 372.

Thin L change-of-height trim can only be applied to junctions manufactured on or after October 10, 2011.

Surface Materials

- Paint
- Wood

Tip: Composite veneers are not available on Answer trims.

Actual Dimensions

Height: 6³/₁₆" , 12⁵/₁₆" , 18¹/₂" , 24¹/₁₆" , 30⁷/₈" , 35³/₃₂" , and 37¹/₁₆"

Build Your Own Elements—Thin Trim, continued

T Corner Change-of-Height—Thin Trim

► Specifying, page 368

T corner change-of-height trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

An L to T aligner needs to be specified in applications connecting a thin L change-of-height trim to a T vertical trim.
► See page 372.

Thin T change-of-height trim can only be applied to junctions manufactured on or after October 10, 2011.

Surface Materials

- Paint
 - Wood
- Tip: Composite veneers are not available on Answer trims.*

Actual Dimensions

Height: 6³/₁₆" , 12⁵/₁₆" , 18¹/₂" , 24¹/₁₆" , 30⁷/₈" , 35³/₃₂" , and 37¹/₁₆"

120° Corner Change-of-Height—Thin Trim

► Specifying, page 369

120° corner change-of-height trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

A 120° to V aligner needs to be specified separately in applications connecting a thin 120° change-of-height trim to a V vertical trim.
► See page 372.

Thin 120° change-of-height trim can only be applied to junctions manufactured on or after October 10, 2011.

Surface Materials

- Paint
 - Wood
- Tip: Composite veneers are not available on Answer trims.*

Actual Dimensions

Height: 6³/₁₆" , 12⁵/₁₆" , 18¹/₂" , 24¹/₁₆" , 30⁷/₈" , and 37¹/₁₆"

V Corner Change-of-Height—Thin Trim

► Specifying, page 369

V corner change-of-height trim height should be determined by using the build your own change-of-height junctions or build your own stacking junction sections of this specification guide.

A 120° to V aligner needs to be specified separately in applications connecting a thin 120° change-of-height trim to a V vertical trim.
► See page 372.

V corner change-of-height trim can only be applied to junctions manufactured on or after October 10, 2011.

Surface Materials

- Paint
 - Wood
- Tip: Composite veneers are not available on Answer trims.*

Actual Dimensions

Height: 6³/₁₆" , 12⁵/₁₆" , 18¹/₂" , 24¹/₁₆" , 30⁷/₈" , and 37¹/₁₆"

Build Your Own Change-of-Height—Thin Trim

Build Your Own Change-of-Height—Thin Trim

Usage Rules

Follow these for all three height T, X, or Y applications and for all four height X applications. The change-of-height overview pages illustrate and provide a style number for all other standard combinations.

Example

Four change-of-height X application.

Post heights:

- 66"
- 54"
- 42"
- 30"

Trim:

- 12" change-of-height end-of-run
- Change-of-height corner junction cap
- 12" L change-of-height trim
- L to T aligner
- 12" T change-of-height trim
- Aligners

The specification guide supports specific style numbers for all L, T, X, V, and Y change-of-height applications with two heights (see page 346). If the change-of-height application has three or more heights, you must follow the directions on the following pages to properly specify your desired application.

Junction caps are always located at the second tallest panel height. If there are two panels at the same tallest height, the junction cap will be located there.

L to T aligners or 120° to V aligners are required to be specified in certain change-of-height applications to provide consistent alignment of trim pieces.

Build Your Own Change-of-Height—Thin Trim, continued

How to Build Your Own Change-of-Height Applications

Step 1: Draw out the panel application you would like to build (T, X, or Y).

Step 2: Junction Posts
Determine the post heights for each leg of the corner junction corresponding to the panel heights.

- Side A (e.g. 78")
- Side B (e.g. 66")
- Side C (e.g. 54")
- Side D (e.g. 42") (For use in X configurations with four different heights only)

Step 3: Junction Blocks
From the list below, select the change-of-height application type that matches your drawing:

- a). T or Y junction with three different panel heights (go to step 3a).
- b). X junction with three different panel heights (go to step 3b).
- c). X junction with four different panel heights (go to step 3c).

Step 3a: If the shortest panel is 48" high or lower, order three blocks.
▶ See specifying page 371.

If the shortest panel is 54" high, order four blocks.
▶ See specifying page 371.

Step 3b: If there are two panels at 78" high and the lowest panel is 54" high, order five blocks.
▶ See specifying page 371.

If there is a panel less than or equal to 48" high and only ONE panel at the tallest height, order three blocks.
▶ See specifying page 371.

For all other change-of-height configurations order four blocks.
▶ See specifying page 371.

Step 3c: For all X junctions with four different panel heights use four blocks.
▶ See specifying page 371.

Step 4: Inside Corner Light Seals

- You will need two inside corner light seals for a T corner and four inside corner light seals for an X corner (none are needed for a Y corner).
 - Inside corner light seals are sold in packages of four.
 - Packages come in three heights: 54", 66", and 78".
 - Specify the height to correspond to the tallest junction and field cut as necessary.
- Inside corner light seal—54"H, package of four **TS754ICLS**
 Inside corner light seal—66"H, package of four **TS766ICLS**
 Inside corner light seal—78"H, package of four **TS778ICLS**

Step 5: Vertical Trim
Locate the application below that is the same as the application you originally illustrated.
Specify the trims listed in the option you selected below. You will be required to refer back to your original drawing several times to calculate the proper trim heights.

Practice Examples—Thin Trim

Example One

Step 1: Draw out the application - X - 4 Change-of-Height

Step 2: Vertical Junction Posts	Quantity	Style Number
A 66" H	1	TS766JP
B 54" H	1	TS754JP
C 42" H	1	TS742JP
D 30" H	1	TS730JP
Step 3 (a-c): Junction Blocks (3c)	1	TS790JB4
Step 4: Light seal	1	TS766ICLS (4 pack)
Step 5: Trim		
End-of-run change-of-height = A - B	1	TS712TCICHT
L change-of-height = B - C	1	TS712TCLCHT
T change-of-height = C - D	1	TS712TCTCHT
90° change-of-height junction cap	1	TS790COHJC
L to T aligner	1	TS7LTA4 (4 pack)
Junction cap aligner	1	TS7CJCA10 (10 pack)

Note: Junction cap resides at the second tallest panel height. In this case there is a panel higher so it is a 90° change-of-height junction cap instead of a 90° corner junction cap.

Example Two

Step 1: Draw out the application - X - 3 Change-of-Height

Step 2: Vertical Junction Posts	Quantity	Style Number
A 54" H	1	TS754JP
B 54" H	1	TS754JP
C 42" H	1	TS742JP
D 30" H	1	TS730JP
Step 3 (a-c): Junction Blocks (3c)	1	TS790JB4
Step 4: Light seal	1	TS766ICLS (4 pack)
Step 5: Trim		
L change-of-height = A - C	1	TS712TCLCHT
T change-of-height = C - D	1	TS712TCTCHT
90° junction cap	1	TS790JC
L to T aligner	1	TS7LTA4 (4 pack)
Junction cap aligner	2	TS7CJCA10 (10 pack)

Note: Junction cap resides at the second tallest panel height. In this case there are two panels at the tallest height so a 90° degree junction cap would be specified instead of a 90° change-of-height junction cap as in the previous example.

Example Three

Step 1: Draw out the application - Y - 3 Change-of-Height

Step 2: Vertical Junction Posts	Quantity	Style Number
A 54" H	1	TS754JP
B 42" H	1	TS742JP
C 30" H	1	TS730JP
Step 3 (a-c): Junction Blocks (3b)	1	TS7120JB3
Step 4: Light seal	N.A.	N.A.
Step 5: Trim		
120° change-of-height = A - B	1	TS712T120CHT(W)
V change-of-height = B - C	1	TS712TVCHT(W)
120° corner junction cap	1	TS7120JC(W)
120° to V aligner	1	TS7120A4 (4 pack)

Build Your Own 3" In-Line Junction—Thin Trim

Build Your Own 3" In-Line Junction—Thin Trim

Usage Rules

If you need to add inches to your application while planning, order the following parts in the appropriate heights to create an "I" junction or a 3" in-line junction connection.

Tip: Junctions 48"H or shorter require two junction blocks. Junctions 54"H or higher require three junction blocks.

Normal In-Line Connection

3" In-Line Junction

TOP VIEW

How to Build Your Own 3" In-Line Junction

- Step 1:** 2 Panel Junction
TS7___JP
- Step 2:** Junction Blocks (pack of 3 - use 2 or 3 depending on height)
- Step 3:** 1 Junction Cap
TS790JC
- Step 4:** 1 Junction Cap Aligner (pack of 10 - use 1)
TS7CJCA10
- Step 5:** 2 T Vertical Trim
TS7___TTVT

Practice Example

Quantity	Style Number
2	TS754JP
1	TS790JB3
1	TS790JC
1	TS7CJCA10
2	TS754TTVT

Build Your Own Stacking Junctions—Thin Trim

Stacking junctions have several implications on the actual frame components of the panel, as well as how the frame is trimmed.

Note: Same height stacking junctions are supported as style numbers, see page 359. This section should only be used when you need to stack and there is not a pre-configured stacking junction style number.

When stacking be sure to follow the steps listed below:

Step 1: Start by drawing out your base application ONLY (do not include stackers).

Corner

Example: 42"H T panel application label one panel A, one panel B, and one panel C.

In-Line

Example: 42"H in-line panel application label one panel A and one panel B.

Step 2: Label each panel with a letter and dimensions (remember to work counterclockwise).

Corner

Example: 42"H T panel application label one panel A, one panel B, and one panel C.

In-Line

Example: 42"H in-line panel application label one panel A and one panel B.

Step 3: Omit **ALL** trims (this will omit the junction cap and aligners as well).

Step 4: Determine where you would like stacking junctions on your application and label them with a letter and dimension.

Remember: Maximum height that an Answer panel can reach is 90". Maximum height that can be stacked on a base panel is 36" consisting of one 24"H and one 12"H or two 18"H stacking junctions.

Corner

In-Line

Step 5: Look at your application in total. Does your application have an in-line or corner (L, T, X, V, or Y) stacking junction?

- For in-line stacking, go to step 6
- For corner (L, T, X, V, or Y) stacking go to step 7

Step 6: In-line stacking junctions

Step 6a: Specify in-line stacking junction for the shared junction. The height specified is the shortest height of the stacking junction. In this example it would be the height of stacking junction D (12").

Step 6b: Specify an end-of-run stacking junction for the difference between the tallest stacking junction and the lowest stacking junction. In this example it would be the height of stacking junction C minus the height of stacking junction D (24" - 12" = 12").

Step 6c: Go to step 7 to specify end-of-run stacking junctions for the stacking junctions that are not in-line. To complete specifying the stacking junctions in this example, one 24" end-of-run and one 12" end-of-run stacking junction would need to be specified.

Step 7: Corner (L, T or X, V, or Y) stacking junctions

Look at each panel individually. Start with panel A and determine what you would like to stack to that panel (if anything). Repeat on the remaining panels in the application.

Base panel A: Add 12" thin end-of-run stacking junction (Panel D)

Base panel B: No change

Base panel C: Add 12" thin end-of-run stacking junction (Panel E)

- Specify the proper height and type of stacking junction
- 1. End-of-run stacking junction
- 2. L, T, X, V, or Y stacking junction

Stacking junction panel D: 12" stacking junction requires two 12" end-of-run stacking junctions

Stacking junction panel E: 12" stacking junction requires two 12" end-of-run stacking junctions

Base panel A: Add 12" thin end-of-run stacking junction (Panel D)

Base panel B: Add 12" thin end-of-run stacking junction (Panel E)

Base panel C: No change

Stacking junction panel D: 12" stacking junction requires one 12" end-of-run stacking junction and a 12" "L" to be shared with panel E

Stacking junction panel E: 12" stacking junction requires one 12" end-of-run stacking junction

Note: 1. Corner stacking junctions are created by attaching thin end-of-run stacking junctions and junction blocks.

2. Thin end-of-run stacking junctions are also used when creating an in-line change-of-height condition.

3. In-line stacking junctions are only used when creating in-line stacking conditions when adjacent panels are the same height.

► See page 360 to specify.

Build Your Own Stacking Junctions—Thin Trim, continued

Step 8: Stacking horizontal frame packages

Each stacking junction needs to be connected by at least one stacking horizontal frame package.

If one side of the panel section has two stacking junctions, and the other side has one, two stacking horizontal frame packages need to be specified.

If there is one stacking junction on both sides of the panel, specify one stacking horizontal frame package to be shared between the two stacking junctions.

▶ See page 378 to specify.

Step 9: Junction blocks

Junction blocks are required at the top of each junction whenever there are two or more junctions or stacking junctions adjacent to each other in a corner application.

▶ See page 371 to specify.

Step 10: Junction caps and aligners

Now that the application is constructed, trims need to be added (since ALL trims were omitted in step 2).

90° Applications (In-Line, L, T, and X)

- Same height base application stacking to same height application
- Change-of-height base application stacking to a change-of-height application
- Change-of-height base application stacking to same height application
- Same height base application stacking to change-of-height application

Same height base application stacking to same height application (see drawing)

Specify: Junction cap: 90° corner
Junction cap aligner: Number required is equal to the number of panels connecting to the junction cap

Change-of-height base application stacking to a change-of-height application (see drawing)

Specify: Junction cap: 90° corner change-of-height
Junction cap aligner: Number required is equal to the number of panels at the second tallest height

Step 10: Junction caps and aligners, continued**Change-of-height base application stacking to same height application (see drawing)**

Specify: Junction cap: 90° corner
Junction cap aligner: Number required is equal to the number of panels connecting to the junction cap

Same height base application stacking to change-of-height application (see drawing)

Junction cap: 90° corner change-of-height
Junction cap aligner: Number required is equal to the number of panels at the second tallest height

120° applications (V or Y) - All 120° applications require:

Junction cap: 120° junction cap
Junction cap aligner: Number required is one less than the number of panels connecting to the junction cap

For complete list of style numbers:

Junction cap ▶ See page 372.
Junction cap aligner ▶ See page 372.

Step 11: Trim**90° Applications
Level 1**

One panel at the tallest height
Two panels at the tallest height in an "L" configuration
Two panels at the tallest height along the spine of a "T" configuration
Look at both sides of the spine individually as two T trims (different heights) will need to be specified.
Three panels at the tallest height

Level 2

Two panels at the second height or higher in an "L" configuration
Two panels at the second height along the spine of a "T" configuration

Three panels at the second height or higher

Level 3

Three panels at third height

120° Applications**Level 1**

One panel at the tallest height
Two panels at the tallest height in a "V" configuration

Level 2

Two panels at the second height or higher in a "V" configuration

Required to Specify

End-of-run/change-of-height trim = tallest height minus second height
L trim = tallest height minus the third height (could be to the floor)
T trim = tallest height minus the third height (could be to the floor).

T trim = tallest height minus the fourth height (could be the floor).

L trim - second height minus third height
T trim = second height minus the third height (could be to the floor).
Look at both sides of the spine individually as two T trims (different heights) will need to be specified.
T trim - second height minus third height

T trim - third height minus fourth height

Required to Specify

120° change-of-height trim = tallest height minus second height
V trim = tallest height minus the third height (could be to the floor)

V trim = second height minus the third height (could be to the floor)

Step 12: Inside corner light seal

Specify Inside corner light seal to match the overall height of the lower panel in the application (used only on 90° applications).

Step 13: Change-of-height aligners

If you have both L and T aligners at one junction, an L/T aligner is needed.
If you have both 120° and V trims at one junction, a 120°/V aligner is needed.

Reconfiguring with Answer—General Guidelines

General Junction Guidelines

Junctions manufactured **before** 10/10/11 are purpose built and have specific features.

- Skin clip attachment locations every 12"
- Cannot accept 6" technology skin
- Cannot accept the open base trim
- Large opening for routing power and data is only at worksurface height
- Corner junctions are purpose built and cannot change configuration from one application to the next

Junctions manufactured **after** 10/10/11 are universal corner junctions.

- Skin clip attachment locations every 6"
- Can accept 6" technology skin
- Can accept the open base trim
- Large openings for routing power and data are located every 12" inside the panel
- Corner junctions are considered universal. The junction can easily be transformed from one configuration to another (i.e. turn an L- into a T-junction)

Purpose built and universal corner junctions can be used in the same application.

Junctions Manufactured Before and After 10/10/11

In-line junctions can be used with Oval, Square, or Thin panel trim. In-line junctions manufactured before OR after 10/10/11 can be used with Thin trim. The only differences between the junctions are those listed in the general guidelines above.

Corner Junctions

Same Height

- Same height are interchangeable between Oval, Square, or Thin panel trim.
- Same height corner junctions manufactured before OR after 10/10/11 can be used with Thin trim.

• **Universal junction configuration** (manufactured after 10/10/11)

- Post and block configuration – all the posts are the same height.
- Can be reconfigured to another style corner junctions.
- Can accept Oval, Square, or Thin panel trims.

Examples:

1 Change an L to a T

- Add one junction post
- Replace the L trim with a T trim
- Add a junction cap aligner
- Inventory L trim

2 Change an L to an X

- Add one junction post
- Add two junction cap aligners
- Inventory L trim

3 Change a T to an L

- Remove one junction post
- Remove one junction cap aligner
- Replace the T trim with an L trim

4 Change an X to an L

- Remove two junction posts
- Remove two junction cap aligners
- Add an L trim

5 Change an X to a T

- Remove one junction post
- Remove one junction cap aligner
- Add a T trim

• **Purpose Built Junction configuration** (manufactured before 10/10/11)

- Cannot be reconfigured to be another style corner junction. If desire to change from an L- to a T-junction, the entire junction must be changed out.
- Can accept Oval, Square, or Thin panel trims.

Corner Junctions – Change-of-Height

Thin Trim

- Change-of-height corner junctions can only accept universal junctions manufactured after 10/10/11.
- Junction posts will **only go up to the height of the panels**

Example:

1 42/54" L-junction

- One junction post at 42"H
- One junction post at 54"H

- Cannot accept purpose built change-of-height junctions manufactured before 10/10/11.
- When reconfiguring from Square or Oval trim to Thin trim, purpose built corner junctions must be change to universal corner junctions.

Junctions Manufactured Before and After 10/10/11, continued

Corner Junctions – Change-of-Height, continued

Oval and Square Trim

- Can accept junctions manufactured before 10/10/11 (purpose built configuration).
- Can accept junctions manufactured after 10/10/11 (universal junction configuration).
- Junction posts will go up to the **highest** panel height

Example:

- ① 42/54" L-junction
 - Two junction posts at 54"H

End-of-Run Junctions

Thin Trim

- Thin trim requires Thin end-of-run junctions
- When reconfiguring from Square or Oval trim to Thin trim, all end-of-run junctions must be changed to Thin end-of-run junctions

Square and Oval Trim

- The end-of-run junction utilized in a Square or Oval application is the same as the in-line junction.
- Square and Oval applications cannot use Thin end-of-run junctions.

Stacking Junctions

- Stacking junctions manufactured before 10/10/11 can be stacked on purpose built junctions (before 10/10/11) or universal junctions (after 10/10/11).
- Stacking junctions manufactured after 10/10/11 can be stacked on purpose built junctions (before 10/10/11) or universal junctions (after 10/10/11).

Trims

Trim style must be consistent across the entire application. Trim styles cannot be mixed and matched across applications.

Example:

- ① Square top caps cannot be used with Thin vertical trims. The entire application must be Thin trim (top caps and vertical trim) OR the entire application must be Square trim (top caps and vertical trim).

New Junctions (after 10/10/11) to New Junctions

End-of-Run Junctions

- **End-of-run junction** includes junction post plus an end-of-run trim and aligner.
 - When reconfiguring a junction post can be used at an end-of-run or as a post to make up a 90° or 120° corner.
 - End-of-run junctions are not the same as in-line junctions.

In-line Junctions

- **End-of-run junction** includes a junction and an in-line aligner.
 - In-line junctions cannot be used at an end-of-run with Thin trim.
 - In-line junctions can be used at an end-of-run with Square or Oval trim.
 - In-line junctions **cannot** be used at a corner junction.

Corner Junctions

- Universal corner junctions are made up of blocks and posts.
- Universal corner junctions can be changed from one configuration (i.e. L) to another configuration (i.e. T, X, V, or Y) by adding blocks and/or junction posts.
- When reconfiguring corner junctions, additional corner trim and aligner pieces will need to be ordered.

Reconfiguring with Answer—General Guidelines, continued

SmartTools Specification Tips

- Before 10/10/11 Oval and Square junctions were manufactured with purpose build junctions. Starting 10/10/11 Oval and Square junctions began being manufactured with universal junctions. The style number stayed the same but the junction construction changed.
- SmartTools designates new and old junctions. Old junctions are designated with an asterisk (*).
- SmartTools provides the ability to change between new and old junctions, as well as connect them together where applicable.
- For assistance in reconfigurations, SmartTools allows designers to create "alternatives". Alternatives will allow designers to create an original application (alternative one) and make a copy of it (alternative two). The designer can then make design changes to alternative two to reflect what the reconfigured space will look like.
- Once design changes are made, the designer will be able to use SmartTools outputs to compare alternative one to alternative two to determine the following information:
 - Bucket one: What product from alternative one can be used in alternative two.
 - Bucket two: What product from alternative one will not be needed in alternative two.
 - Bucket three: What additional product will be needed in alternative two.
 - Since universal junctions can be broken down into individual components (blocks, posts, light seals, and trim), to re-use the maximum number of parts a designer can manually determine if a match can be made between the parts left in bucket two and the parts needed in bucket three.

Base Horizontal Frame Packages—Thin Trim

Base horizontal frame packages include horizontal connecting bars that lock into vertical junctions and complete the structure of a panel. A top cap and pair of base trims are also included. Cable tray and base cable tray are available as options.

► Specifying, page 376

Top cap snaps onto top of panel skins. Top caps to accommodate change-of-height are also available. Wood veneer is available as an option.

Quick lock connects horizontal bars to vertical junctions for quick assembly.

Horizontal connecting bars lock into vertical junctions. The top bar can be lowered to a maximum of 24" from the top position. The bottom bar must always be positioned in the lowest slot in a junction.

Optional cable tray can be used for additional support of cables. Additional cable trays can be installed and arranged at various heights within the frame for communications access and cable routing.

Base trim or open base trim styles are available on panels with Thin trim.

Base trim with knockouts accommodates power and communication terminations. Top knockout is for power, bottom knockout is for communication. Filler to close unused openings is available from Service Parts (TS7BTFSR).

Optional base cable tray can be used to support lay-in of cables.

Actual Dimensions

Width 17¹³/₁₆" , 23¹³/₁₆" , 29¹³/₁₆" , 35¹³/₁₆" , 41¹³/₁₆" , 47¹³/₁₆" , 59¹³/₁₆" , and 71¹³/₁₆"

Base trim height 3³/₄"

Receptacle Opening

Width of opening 2⁵/₈"

Height of opening 1³/₈"

Product Details

Horizontal frame packages are available when you want to build up your own panel. The package includes all the components of a panel except the skins so you can order the skins separately to mix combinations of skin surface materials and colors. These frame packages do not include vertical junctions. Cable trays and base cable trays are optional.

Two horizontal connecting bars must be used in each base panel.

Horizontal bars determine panel width. They are not dedicated to a specific panel height; any horizontal bar can be used or reused with any junction height.

Top horizontal bar may be lowered to allow for a 12"H, 18"H, or 24"H glass window or consolidation point kit to be placed at the top of the panel. Bottom horizontal bar in base panel must remain in lowest position.

Top caps are available in three styles - thin, square, and oval. This section covers Thin trims. Horizontal frame packages should be specified with Thin trim. Thin, square, and oval top caps can not be mixed between adjacent panels. *Tip: Change-of-height top cap option is only needed when using in-line change-of-height.*

Omit top cap option is available and should be selected when adding a frameless glass screen to the top of the panel or when spanning a single top cap across multiple panels.

Spanning top caps are available for Thin trims.

When spanning a single top cap across multiple panels, select the omit top cap option and specify a spanning top cap separately. Top cap width must match total width of spanned panels.

Spanning top caps can only be used in an in-line condition. They cannot span over a corner junction.

Spanning top caps can be used on any panel height.

In-line spanning top cap lightseals should be specified separately for each in-line panel joint the top cap spans.

Omit base trim option should be selected when using skins to the floor.

Base trims are available with or without knockouts. Base trims with knockouts accommodate power and communication terminations.

Open base trims are available. They do not accommodate power and data routing or entry in the base. Open base trim can only be added on a junction manufactured on or after October 10, 2011.

Open base trims occupy the same space as the standard base trims. Open base trims occupy the bottom 3¾" of the panel; the height of the opening is 2½".

A panel with open base trim cannot serve as the spine panel in an off-module connection.

Cable tray can be positioned every 6" vertically above the base to support cable routing.

Cable tray can accept added cable carriers attached below tray to expand horizontal cable management options. ▶ See *Montage Specification Guide* for cable carrier (ZCC).

Base cable tray is used only in the base to support lay-in cable routing in the base. Base cable tray cannot be used if omit base trim option is selected for one or both sides of panel or if open base trim is used.

Connections

Quick lock on both ends of the panel's horizontal connecting bars engage the junction in a tight structural connection.

Wiring & Cabling

Vertical lay-in cable routing can be accommodated behind skins.

As an alternative to lay-in cable routing, vertical routing of power and cables through panel interior can be accommodated by openings in horizontal connecting bars. Also, see lay-in utility packages for vertical lay-in of power and cables.

▶ Page 170

Base Horizontal Frame Packages—Thin Trim, continued

Feed-through horizontal connecting bar cable sleeves can be added in the field to finish the exposed metal edges of vertical cable pass-through openings.

Knockouts in base trim can be removed in the field where needed. Knockout dimensions are 1³/₈"H by 2⁵/₈"W.

Communication outlets attach to openings in panel base trim. Order communication outlets from an outside vendor. Knockouts for communication in base accommodate modular furniture size only.

Surface Materials

Top cap and base trim

- Paint color chosen on base trim will also apply to the top cap. They are not chosen independently.
- Wood veneer (option)

Tip: Answer panel wood trims are only available with quarter-cut finishes with the exception of maple finishes. Maple on wood trims is only available with flat-cut finishes. For ordering simplicity, both flat-cut and quarter-cut finishes can be specified on panel trims. However, for all finishes except maple, if a flat-cut finish is selected, the trims will have the coordinating quarter-cut finish. For maple finishes, if quarter-cut is selected, the trims will have the coordinating flat-cut finish. Blending panel trims with other wood products that have flat-cut finishes will be visually acceptable for most applications. If a more exact match is desired for non-maple finishes, please specify quarter-cut finishes for the entire project. If a more exact match is desired for maple finishes, please specify flat-cut finishes for the entire project.

Horizontal connecting bars

- Black paint
- Tip: Components are hidden when properly installed.*

Application Topics

Use a cable tray to provide extra support for 60"W and 72"W full skins where people may lean against the panel.

Stacking Horizontal Frame Packages

Stacking horizontal frame package provides structural stability for stacking junctions.
▶ Specifying thin, page 378

Each stacking junction is specified separately.
▶ Page 359

When stacking, vertical trim must be specified separately to span the full-height of the base junctions plus the stacking junction.

Each stacking segment must have one horizontal connecting bar.
Exception: If a window is used with stacking junctions, a horizontal connecting bar is not needed.

Horizontal connecting bar is included with each stacking horizontal frame package.

Skins, ordered separately, are added to both sides of stacking frame.

Actual Dimensions

Width 17¼", 23¼", 29¼", 35¼", 41¼", 47¼", 59¼", and 71¼"

Product Details

Stacking horizontal frame package includes one horizontal connecting bar. Stacking junction is not included.

Stacking horizontal frame package is available in eight widths— 18", 24", 30", 36", 42", 48", 60", and 72"—to match panel width. These horizontal connecting bars are identical to those in horizontal frame packages and can be re-used with any type of junction.

Connections

Quick-lock mechanism on the horizontal connecting bar engages the stacking junction in a tight structural connection.

Base panel must always have two horizontal connecting bars.

Wiring & Cabling

Vertical lay-in cable routing

Vertical lay-in cable routing can be accommodated behind skins.

Vertical routing of power and cables through panel interior is accommodated by openings in horizontal connecting bars.

Feed-through horizontal connecting bar cable sleeves can be added in the field to finish the exposed metal edges of vertical cable pass-through openings.

Power kit installation for stacking components is the same process as for installation in base panels.

Surface Materials

Stacking horizontal frame package

- Black

Tip: Components are hidden when properly installed.

Application Topics

When stacking a 12"H, 18"H, or 24"H window, a stacking horizontal frame package is not needed. Remember, the base panel always has two horizontal connecting bars for support.

When double stacking junctions, each stacking junction must have a horizontal beam.

No more than two windows can be stacked on top of each other.

Consolidation point kit cannot be used with stacking components.

Stacking horizontal frame package

is used when additional horizontal bar is needed in off-module application. See off-module guidelines.

Stacking Stability Guidelines

provides detailed information on applications.

▶ Page 142

Frameless Glass Screens with Recessed Attachment—Thin Trim

Frameless glass screen with recessed attachment can be added to the top of a panel to help define space and provide some privacy while still providing access to natural light and promoting communication between adjacent workers.

► Specifying, page 380

Product Details

Frameless glass screen with recessed attachment is secured to horizontal connecting bar by supports below the top cap. Two brackets are used below the top cap to attach the glass to the panel on 24"–66"W panels. Three brackets are used on panels 72" and wider.

Frameless glass screens with recessed attachment can be used on panels with thin profile trim.

Frameless glass kit includes glass screen, supports, and top caps.

Gap between adjacent glass screens is 1/8".

Actual Dimensions

Glass Width – standard: 23⁷/₈", 29⁷/₈", 35⁷/₈", 41⁷/₈", 47⁷/₈", 53⁷/₈", 59⁷/₈", 65⁷/₈", 71⁷/₈", 77⁷/₈", 83⁷/₈", 89⁷/₈", and 95⁷/₈"

Glass Width – change-of-height one end Thin trim: 23⁷/₁₆", 29⁷/₁₆", 35⁷/₁₆", 41⁷/₁₆", 47⁷/₁₆", 53⁷/₁₆", 59⁷/₁₆", 65⁷/₁₆", 71⁷/₁₆", 77⁷/₁₆", 83⁷/₁₆", 89⁷/₁₆", and 95⁷/₁₆"

Glass Height: 95¹/₁₆", 15¹/₂", and 21⁵/₈"

Glass Thickness: 3/8"

Surface Materials

Glass

- 6500 Clear Glass
- 6530 Frosted Glass

Tip: Frosted glass for recessed frameless glass attachment is a laminated construction. There may be variation in color, texture, and finish between the sample of 6530 Frosted Glass and the actual product.

Top cap

- Paint
- Wood veneer

Application Topics

Frameless glass screen

can be placed on the top of a panel only. Top beam in the panel must be located in the top position of the frame in order to support frameless glass. Frameless glass can be used on base panels or stacking panels.

Frameless glass screen cannot be used when a window is located in the top position of the panel.

At an in-line change-of-height condition, a change-of-height top cap should be specified. Change-of-height top cap option is available to allow for positioning of glass next to change-of-height trim on one side only. Glass is shortened and top cap provided supports change-of-height on one end only. A change-of-height top cap is not needed at a corner change-of-height condition.

Frameless glass screen will not fit between two in-line change-of-height trims.

Frameless glass kit

is available without glass screen to accommodate customer's own glass. See chart of field installed glass size requirements for specific dimensions required for glass to fit in frameless glass brackets. Steelcase recommends the use of safety glass meeting ANSI Z97.1 for field installed glass. Check with your local building authority for requirements in your area.

A single frameless glass screen can span over two or more in-line panels up to 96".

Frameless glass screens with recessed attachment cannot span a corner junction.

In-line spanning top cap lightseal must be specified separately when used in this application. Spanning top cap lightseal attaches to underside of top cap to fill space between skin lightseals. Specify one for each in-line junction the frameless glass screen spans.

Before November 2012 After November 2012

Plastic end-of-run and junction cap aligners manufactured after November 2012 will have features to accommodate recessed frameless glass. Aligners manufactured before November 2012 will not be able to accommodate recessed frameless glass and new aligners will need to be ordered.

Each Answer frameless glass with recessed attachment kit will come with two aligners to align top caps when two frameless glass kits are used in an in-line condition.

When specifying frameless glass or top cap mounted storage in a wall-start application or an off module fin panel, the wall-start option should be selected. A recessed frameless glass top cap connector (TS7TFGRC) must also be ordered for this application.

A recessed frameless glass top cap connector (TS7TFGRC) must be specified when a frameless glass screen is adjacent to a corner junction and the frameless glass top caps are located at a different (lower) height than the junction cap.

A recessed frameless glass top cap connector (TS7TFGRC) must be specified when a frameless glass screen is adjacent to a boundary screen that is the same or taller height as the panel.

Recessed frameless glass cannot be used on a spine panel hosting the same height off-module connection. The off-module fin panel can use recessed frameless glass, but must have the wall-start option specified.

When omitting glass and using acrylic or 3 form material in place of glass additional support clamps may need to be ordered as service parts (T522096SR or T522097SR). Frameless glass kits 54" to 66" will also require additional support clamps to be ordered. When installing the support clamps the maximum allowed distance between the clamps is 48".

Frameless Glass Screens
with Recessed Attachment—
Thin Trim

Frameless Glass Screens with Clip Attachment—Thin Trim

Frameless glass screen with clip attachment

can be added to the top of a panel to help define space and provide some privacy while still providing access to natural light and promoting communication between adjacent workers.

► Specifying, page 383

Product Details

Frameless glass screen with clip attachment

is secured to horizontal connecting bar by supports below the top cap and brackets above the top cap. Two brackets are used above the top cap to attach the glass to the panel on 24"–60"W panels. Three brackets are used on panels 78" and wider.

Frameless glass screens with clip attachment

can be used on panels with thin profile trim.

Frameless glass kit

includes glass screen, brackets, supports, and top cap with holes to accommodate brackets.

Gap between adjacent glass screens is 1/4".

Actual Dimensions

Glass Width – standard: 23³/₄", 29³/₄", 35³/₄", 41³/₄", 47³/₄", 59³/₄", 71³/₄", 77³/₄", 83³/₄", 89³/₄", and 95³/₄"

- 6500 Clear Glass
- 6530 Frosted Glass

Tip: Frosted glass for clip attachment frameless glass is a double opaque glass construction. There may be variation in color, texture, and finish between the sample of 6530 Frosted Glass and the actual product.

Brackets

- Paint

Top cap

- Paint
- Wood veneer

Application Topics

Frameless glass screen

can be placed on the top of a panel only. Top beam in the panel must be located in the top position of the frame in order to support frameless glass. Frameless glass can be used on base panels or stacking panels.

Frameless glass screen cannot be used when a window is located in the top position of the panel.

Change-of-height top cap option is available to allow for positioning of glass next to change-of-height trim on one side only. Glass is shortened and top cap provided supports change-of-height on one end only.

Frameless glass screen will not fit between two change-of-height trims.

Frameless glass kit is available without glass screen to accommodate customer's own glass. See chart of field installed glass size requirements for specific dimensions required for glass to fit in frameless glass brackets. Steelcase recommends the use of safety glass meeting ANSI Z97.1 for field installed glass. Check with your local building authority for requirements in your area.

A single frameless glass screen can span over two or more panels.

90" and 96" wide frameless glass screen kits include three brackets. Two brackets attach to supports below the top cap. The third bracket attaches only to the top cap through a hole that is drilled in the top cap by the installer on site.

In-line spanning top cap lightseal must be specified separately when used in this application. Spanning top cap lightseal attaches to underside of top cap to fill space between skin lightseals. Specify one for each in-line junction the frameless glass screen spans.

A template tool is available from Service Parts (T511082SR) to assist in locating where holes are to be drilled on the beam of an existing panel to allow supports to be attached. This only applies to beams produced prior to September 2009. Beams produced after this date include holes to allow frameless glass supports to be attached.

Field-Installed Glass Size Requirements

Style Number	Maximum Height	Maximum Width	Thickness Range (min-max)
Standard			
TS71224TFG	11 ³ / ₄ "	23 ³ / ₄ "	.350-.400"
TS71230TFG	11 ³ / ₄ "	29 ³ / ₄ "	.350-.400"

TS71242TFG	11 ³ / ₄ "	41 ³ / ₄ "	.350-.400"
TS71248TFG	11 ³ / ₄ "	47 ³ / ₄ "	.350-.400"
TS71260TFG	11 ³ / ₄ "	59 ³ / ₄ "	.350-.400"
TS71272TFG	11 ³ / ₄ "	71 ³ / ₄ "	.350-.400"
TS71278TFG	11 ³ / ₄ "	77 ³ / ₄ "	.350-.400"
TS71284TFG	11 ³ / ₄ "	83 ³ / ₄ "	.350-.400"
TS71290TFG	11 ³ / ₄ "	89 ³ / ₄ "	.350-.400"
TS71296TFG	11 ³ / ₄ "	95 ³ / ₄ "	.350-.400"
Change-of-Height – one end			
TS71224TFG	11 ³ / ₄ "	23 ¹ / ₄ "	.350-.400"
TS71230TFG	11 ³ / ₄ "	29 ¹ / ₄ "	.350-.400"
TS71236TFG	11 ³ / ₄ "	35 ¹ / ₄ "	.350-.400"
TS71242TFG	11 ³ / ₄ "	41 ¹ / ₄ "	.350-.400"
TS71248TFG	11 ³ / ₄ "	47 ¹ / ₄ "	.350-.400"
TS71260TFG	11 ³ / ₄ "	59 ¹ / ₄ "	.350-.400"
TS71272TFG	11 ³ / ₄ "	71 ¹ / ₄ "	.350-.400"
TS71278TFG	11 ³ / ₄ "	77 ¹ / ₄ "	.350-.400"
TS71284TFG	11 ³ / ₄ "	83 ¹ / ₄ "	.350-.400"
TS71290TFG	11 ³ / ₄ "	89 ¹ / ₄ "	.350-.400"
TS71296TFG	11 ³ / ₄ "	95 ¹ / ₄ "	.350-.400"

Tip: Field installed glass should always be tempered. Laminated glass must not be used.

When using frameless glass on a spine panel with a same height off-module panel connections, the off-module cannot connect within 10" of an end-of-run or in-line junction connection.

Top Cap Mounted Storage

Top cap mounted storage allows for existing Duo, Elective Elements, Universal Laminate Enhanced, and c:scape storage to be mounted on top of Answer panels.

► Specifying, page 384

c:scape, Duo, Universal Laminate Enhanced, and Elective Elements storage

can be mounted on top of Answer panels with thin trim.

Top cap mounted storage can be mounted both on- and off-module.

Top cap mounted storage can be specified for both center-mounted (shared) and aisleway applications.

Product Details

Top cap mounted storage utilizes existing c:scape, Duo, Universal Laminate Enhanced, and Elective Elements storage and secures it to the horizontal connecting bar using supports below the top cap. Storage units can be mounted both centered (shared) or in an aisleway condition (personal). There are unique brackets for each application. Two brackets are used below the top cap to attach storage units that are center mounted (all sizes) or in aisleway applications where the storage is between 30"W and 48"W. Three brackets are used in aisleway applications where the storage units are 54"W to 72"W.

The top cap mounted storage solution is comprised of three elements specified separately:

- standard c:scape, Duo, Universal Laminate Enhanced, or Elective Elements storage. ► See complete listing for compatible storage, page 70.
- top cap mounted storage bracket.
- top cap and aligner packages.

Top cap mounted storage can be used on panels with thin trim only.

Front View

When installed, there is a 1/2" gap between the top cap and the bottom of the storage unit.

When mounting Elective Elements personal storage, a proud back should be specified. While inset is also an option, proud will provide you with a cleaner aesthetic.

When mounting c:scape storage (personal and slim), the bottom of the storage will have extra holes visible that are used when storage is used in a c:scape application.

The maximum storage unit length that can be used in a top cap mounted application is 72". Storage wider than 72" cannot be top cap mounted.

Application Topics

Top cap mounted storage can be placed on top of a thin trim panel only. It can be used with both painted and wood trims. The top beam in the panel must be located in the top position of the frame in order to support top cap mounted storage.

Top cap mounted storage can only be used on base panels. It cannot be used on stacking panels.

Top cap mounted storage can not be used in a change-of-height condition when the storage is located on the lower panel and matches the panel width. It can be used if the storage width is smaller than the panel width.

Top cap mounted storage will not fit between two change-of-height trims if the storage is the same width as the panel it is mounted to. Storage must be narrower width than panel in this application.

Top cap and aligner packages are ordered together as one style number. The aligner package includes two end-of-run aligners, two in-line aligners, and one pair of recessed-to-recessed aligners.

In certain application conditions a top cap connector aligner (TS7TFGR) will also need to be specified. These include when storage or frameless glass is used on-module next to a wall-start junction, adjacent to a boundary screen, on an off-module panel, or in a corner change-of-height where the storage is used on the lower panel.

Top cap mounted storage has the ability to be mounted on panel module, or in off-module conditions. When the storage matches the panel width, the standard top caps from the horizontal frame package can be omitted as the top cap mounted storage top caps will be sufficient.

When the top cap mounted storage does not match the panel width, standard top caps will need to remain specified with the horizontal frame packages. Center mounted top caps will be used under the storage. The standard top caps will be used to finish off the top of the panel where there is not storage present. The standard top caps will need to be field cut to size.

Top cap mounted storage has the ability to span both in-line and corner junctions.

In-line spanning top cap lightseal must be specified separately when used in this application. Spanning top cap light seal attaches to the underside of the top cap to fill space between skin lightseals. Specify one for each in-line junction the top cap mounted storage spans over.

End-of-run and junction cap aligners manufactured after November 2012 will have features to accommodate top cap mounted storage top caps. Aligners manufactured before November 2012 will not be able to accommodate top cap mounted storage top caps and new aligners will be needed.

Duo, Universal Laminate Enhanced, and Elective Elements storage can be top cap mounted on Answer panels up to 48"H. c:scape storage can be top cap mounted on Answer panels up to 42"H.

When top cap mounted storage is used in an aisleway application the back of the storage unit will overhang the back of the panel 3 1/2".

Connections

Both center and aisleway conditions can accept storage units up to 72"W. Center mounted conditions can accept storage up to 25"D. Aisleway mounted applications can accept storage up to 17"D.

Top cap mounted brackets should be mounted within 10" from the end of the storage unit. When possible, use the predrilled holes in the Answer horizontal bar. In some applications and in aisleway applications where the storage is larger than 48"W, additional holes will need to be drilled into the beam.

Both center and aisleway mounted storage units cannot overhang an end of run or corner junction more than 3 1/2" due to ADA guidelines.

Top Cap Mounted Storage, continued

Universal tie plates (TS7TIEPLATE) can be used to help align two storage units mounted in-line with no gap between them. Two tie plates should be used, one near each edge. When using with Duo, Universal Laminate Enhanced, or Elective Elements storage, the hardware shipped with the plates can be used. When used with c:scape storage, pan head self drilling fasteners should be ordered from the service parts catalog (853108629MP).

Panel Packages—Thin Trim

Panel packages include two monolithic fabric skins and a horizontal frame package. Answer panels always share a junction with adjacent panels. Order the style of junction you need separately.

► Specifying, page 386

Top cap snaps onto top of panel skins. Top caps are available in Thin trim. Change-of-height top caps, wood veneer top caps, and omit top caps are also available as options on Thin trim.

Power can be field-installed every 12" vertically using powerkits.

Junctions, ordered separately, are always shared by adjacent panels. They are available for in-line, L, T, V, X, Y, and end-of-run configurations. Wall-start junctions and off-module connector brackets are also available.

Optional cable tray can be used for additional support of cables. Additional cable trays can be installed and arranged at various heights within the frame for communications access and cable routing.

Skins attach to frame without tools and can be removed and repositioned easily. They are not dedicated to a specific location.

Power and communication can be accessed by cutting skin in the field. Templates for cutting both receptacle and communication cutouts are available from Service Parts (T500940SR). Filler to close unwanted cutout in a skin is available from Service Parts (TS7STFSR).

Powerkits include powerblocks attached to a supporting power tray. ► Page 182

Base trim or open base trim styles are available on panels with Thin trim as standard.

Base cover has knockouts to accommodate power and communication terminations. Top knockout is for power, bottom knockout is for communication. Filler to close unwanted knockouts is available from Service Parts (TS7BTFSR).

Horizontal connecting bars lock into the vertical junctions at the top and the bottom location to provide structural stability for the panels.

Optional base cable tray can be used to support lay-in of cables.

Actual Dimensions

Depth	3"
Width	17 ⁵ / ₆₄ ", 23 ⁵ / ₆₄ ", 29 ⁵ / ₆₄ ", 35 ⁵ / ₆₄ ", 41 ⁵ / ₆₄ ", 47 ⁵ / ₆₄ ", 59 ⁵ / ₆₄ ", and 71 ⁵ / ₆₄ "
Height	41 ³ / ₄ ", 47 ¹⁵ / ₁₆ ", 54 ³⁵ / ₆₄ ", and 66 ¹⁵ / ₃₂ "

Order panel packages to create common panel configurations quickly and easily.

1. Specify a panel package of the width and height you need in thin top caps.

Note: Cable trays and base cable trays are optional.

2. Order vertical junctions to complete panel packages and to join panels in in-line, L, T, V, X, and Y configurations and to terminate an end-of-run. Junctions are available with trim.

3. Specify powerkits where you will need power. You can specify a powerkit as an option on the panel package, or you can order powerkits separately.

Answer Boundary Screens

Boundary screens provide light scale space division and privacy for a variety of worksettings.

Answer boundary screens attach to the Answer panel at the end-of-run as an alternative to a panel, when power and hang-on components are not required.
 ▶ Specifying, pages 388 - 402

Answer boundary screens have a thickness of 13/16".

Screens are available in laminate or wood veneer.

Boundary screens come standard with adjustable glides, with a range of 1 1/2". The glides are located 1 1/2" from the outside of each edge.

Product Details

Boundary screens are available in two attachment versions – single-connect and dual-connect.

Single-connect boundary screens attach to the Answer panel using an end-of-run junction.
Tip: Single-connect boundary screens do not require any additional attachment for stability.

Dual-connect boundary screens have two attachment points: the end-of-run junction, and an adjacent worksurface or 1.5-H or higher storage unit.

Boundary screens with dual connections can be used in place of a leg to support a worksurface.

Actual Dimensions

Height	30", 36", 42", 48", and 54"
Single-Sided Width	27", 33", 39", 45", 51", 57", 63", 69", and 75"
Spanning Width	51", 57", 63", 69", and 75"
Split Width	25 1/2", 31 1/2", 37 1/2", 43 1/2", 49 1/2", 55 1/2", 61 1/2", 67 1/2", and 73 1/2"
Return Width	18", 24", and 30"
Thickness	13/16"

Note: Answer boundary screen widths can also be specified parametrically.

Boundary screen heights align with thin trim top cap panel heights at 30", 42", 48", and 54". 36"H boundary screens are also available.

Boundary screens have modular heights and widths. Parametric widths are allowed from 24"W to 75"W increasing in 1/16" increments. Boundary screen return widths are available at 18", 24", and 30", and are also available parametrically from 18"W to 75"W increasing in 1/16" increments.

Answer boundary screens are available in five different configurations.

1. Single-sided boundary screens provide boundary to one side of an Answer panel and are specified as either left or right. Right handed application is shown above.

Single-sided boundary screens will always include the 3" thickness of the Answer panel to which they attach. Minimum width for a single-sided boundary screen is 27" (24" inside, and 3" for the Answer panel thickness). The maximum width is 75" (72" inside, and 3" for Answer panel thickness). The above image is shown with a right handed application.

Note: The above image shows a 75" specified width. The planning width is 72".

2. Spanning boundary screens use one screen segment to provide boundary of equal widths to both sides of an Answer panel.

Spanning boundary screens always extend in equal dimension from the panel to which they attach and include the 3" thickness on the Answer panel. Minimum width for a spanning boundary screen is 51" (48" inside, and 3" for the Answer panel thickness). The maximum width is 75" (72" inside and 3" for Answer panel thickness). *Note: The above image shows a 75" specified width. The planning width is 72".*

3. Split boundary screens use two screen segments to provide boundary to both sides of an Answer panel. Both sides of a split boundary screen are the same height.

Split boundary screens can either be equal or asymmetrical in dimension from the panel to which they attach and include the 3" thickness of the Answer panel. Minimum width for a split boundary screen is 25 1/2" (24" inside, and 1 1/2" for half of the Answer panel thickness) for each side of the panel. The maximum width is 73 1/2" (72" inside, and 1 1/2" for half of the Answer panel thickness) for each side of the panel.

Note: The above image shows a 25 1/2" specified right width and a 73 1/2" specified left width. The planning right width is 24" and the planning left width is 72".

Answer Boundary Screens, continued

4. Single-sided L return boundary screens provide boundary and additional privacy to one side of an Answer panel. Both screen segments (primary and return screen) are the same height and are specified as either left or right handed. Right handed application is shown above.

3" Answer panel thickness

Single-sided L return boundary screens in modular widths have inside clearance in 6" increments to wrap standard width worksurfaces in 6" increments. Panel connected segments (the primary screens) are available in widths of 27" (24" inside, and 3" for Answer panel thickness) to 75" (72" inside, and 3" for Answer panel thickness). The inside width of modular returns are 18", 24", or 30". There is an additional 1³/₁₆" that will be added to the return width for the primary screen thickness. Both boundary screens have equal heights and are specified as either left or right handed. Right handed application is shown above.
Note: The above image shows a 76³/₁₆" specified width. The planning width is 72".

5. Split L return boundary screens consist of four segments to provide boundary and additional side privacy to both sides of an Answer panel. Split L configuration screens do not have to have symmetrical widths, but must have the same height.

Split L return boundary screens in modular widths have inside clearance in 6" increments to wrap standard width worksurfaces from 24" to 72" in 6" increments for each side of the split. The inside width of modular returns will be 18", 24", or 30". There is an additional 1³/₁₆" that will be added to the return width for the primary boundary screen thickness. Each panel connected segment is available in widths from 25¹/₂" (24" inside, and 1¹/₂" for half of the Answer panel thickness) to 73¹/₂" (72" inside, and 1¹/₂" for half of the Answer panel thickness).

Note: The above image shows a 61¹/₂" specified left width and a 73¹/₂" specified right width. The planning left width is 60" and the planning right width is 72".

Connections

Boundary screens can be attached to Answer panels that are of equal height to the screen, higher than the screen, or lower than the screen.

Boundary screens cannot be more than 18" taller than the Answer panel to which they connect.

Boundary screens may be shorter than connecting Answer panel in 6" increments between 12" and 36". In this situation, specify change-of-height trim separately.

Tip: When specifying a boundary screen equal to the height of the Answer panel, order a same height end-of-run junction for height of Answer panel with the "omit trim" option.

Tip: When specifying a boundary screen shorter than the height of the Answer panel, order a same height end-of-run junction for height of Answer panel with the "omit trim" option, and order a change-of-height trim.

Tip: When specifying a boundary screen taller than the height of the Answer panel, order a same height end-of-run junction for height of Answer panel with the "omit trim" option.

When boundary screen is shorter than connecting Answer panel in increments not supported with standard trim heights, order change-of-height trim through Specials.

When attaching to Answer panels with a stacking junction, boundary screens must be at least 6" lower than the start of the stacking segment.
Tip: Order change-of-height end-of-run trim separately.

On both single- and dual-connect boundary screens, there is a metal cover plate that covers the connection bracket that connects the boundary screen to the end-of-run junction. The cover is located 22" from the bottom of the screen and is 3"W and 14"H.

Return segments also have a second metal cover plate that covers the connection bracket that connects the return to the primary screen segment.

Surface Materials

Boundary screens

- Laminate
- Wood veneer

Edge on laminate

- Plastic

Bracket cover

- Paint

Open Line laminates with grain direction

can only be applied vertically. Open Line laminates are not allowed on boundary screens that are 60" or wider, or have segments that are 60" or wider.

On single-sided boundary screens,

horizontal wood grain laminates and veneers can be applied up to 75"W. Vertical wood grain laminates can be applied up to 59"W. Vertical wood grain veneers can be applied up to 75"W.

On spanning boundary screens,

wood grain laminates and veneers can be horizontal grain direction up to 75"W. Vertical wood grain laminates can be applied up to 59"W. Vertical wood grain veneers can be applied up to 75"W.

On split boundary screens,

horizontal wood grain laminates and veneers can be applied up to 73½"W. Vertical wood grain laminates can be applied up to 59"W. Vertical wood grain veneers can be applied up to 73½"W.

On split boundary screens with horizontal grain direction,

the grain pattern of two screen segments may not align.

All boundary screen sides

will have the same finish applied.

Application Topics

Answer boundary screens

fulfill the same stability requirements as Answer panels of the same heights and widths. Answer boundary screens do not support hang-on components.

▶ See *Stability Guidelines*, page 142

Boundary screens

attach at the end-of-run location of an Answer panel with thin trim top detail.

Single-connect boundary screens

are for use with height-adjustable or freestanding worksurfaces when storage is not available or is shorter than 1.5-High.
 ▶ Page 76

Dual-connect boundary screens

can be used as a support in place of a leg. They are not for use with height-adjustable worksurfaces.
 ▶ Page 76

Applications

using split boundary screens must use dual connections on both sides, or a single connection on each side.

Boundary screens

cannot attach to an Answer end-of-run junction where an Answer panel foot is being used.

Boundary screens can attach to panels with frameless glass application.

Tip: Use the base junction height as the connecting panel height.

Boundary screens are not for use with wall starts.

One single-sided boundary screen

may be attached at the end of the Answer panel. If the intent is to have a boundary screen in both directions of the panel, use either spanning or split boundary screens.

Single-sided and split boundary screens

are available left and right handed. This is determined by the user facing the attaching Answer panel. Left sided application is shown above.

Split boundary widths do not have to be symmetrical.

Dual-connect boundary screens of any configuration

must always utilize both connection points to ensure stability.

Dual-connect split and spanning boundary screens

must have a properly secured worksurface and/or storage units on each side of the Answer panel to make a second connection.

When dual-connect screens

are attaching to a worksurface, the worksurface must attach to the panel in two points along the back or sides of the panel.

Tip: The second connection must be within 6" of the end of the panel-supported worksurface. Connection point to worksurface must have a flat back edge.

When using boundary screens with low storage,

the storage must be attached to the panel using storage-to-panel connectors. Storage units must be 1.5-High or higher. The storage must be connected to the panel at the opposite end of the boundary screen.

Worksurface supports

cannot overlap with the secondary dual-connect bracket.

If storage specified on one side of an Answer panel

does not have a storage to panel connection, the boundary screen must be single-connect.

Side support bracket

can be used adjacent to dual-connect boundary screens and Answer panel connections at the end-of-run junction.

Tip: Other panel-mounted supports such as a cantilever will not fit.

Answer Boundary Screens, continued

Applications that have a panel connected work-surface on one side and a freestanding table on the other side of the panel must use single-connect boundary screens.

All L return boundary screens have a step miter detail at the adjoining edge.

Answer Panel Overview—Square and Oval Trim

Panel buildups allow you to create unique configurations by mixing surface materials and colors on segmented panels. Order skins and horizontal frame packages separately.

Panel frame is made up of two major elements—vertical base junctions and base horizontal connecting bars. Vertical junctions are ordered separately.

Stacking components can be used on both panel buildups and panel packages.

Standard change-of-height trim has either a rounded bottom edge to fit the curve of oval panel top caps or a straight edge to fit square panel top caps.

Leveling glides adjust to install panels on uneven floors. Range is 2³/₄".

Panel packages are used to create common configurations quickly and easily. Packages include a horizontal frame package and skins for both sides of the panel.

Stacking change-of-height trim has a straight bottom edge to fit on top of standard change-of-height trim.

Stacking horizontal frame package must be used with stacking junctions.

Stacking junctions are always shared by adjacent panels and can be used in panel buildups and panel packages. They are available for in-line, L, T, V, X, Y, and end-of-run configurations.

Skins attach to frame without tools and can be removed and repositioned easily.

Base junctions, are always shared by adjacent panels. They are available for in-line, L, T, V, X, Y, and end-of-run configurations. Wall-start junctions and off-module connectors are also available.

Base horizontal connecting bars lock into the vertical junctions at the top and the bottom location of base junction to provide structural stability for the panels.

Powerkits include power-blocks attached to a supporting power tray.

Alternate powerkit harness routing can be accommodated through the junction opening. In in-line applications installed on uneven floors, route harness through junction opening to prevent harness from being exposed.

Actual Dimensions

Height 29³/₈", 41³/₄", 47¹⁵/₁₆", 54¹/₈", 66¹⁵/₃₂", and 78²⁷/₃₂"

Note: Height is minimum from floor to top of top caps. Leveling glides can extend 2³/₄".

Panel Buildups

Panels—Square and Oval Trim

Order panel components separately to create unique configurations.

1. Begin by planning your frames. Junctions determine height and horizontal connecting bars determine width.

1a. Corner junctions can easily be reconfigured by adding or removing a junction post (available on junctions shipped on or after October 10, 2011).

2. Order skins for both sides of panel.

Exception: Windows accommodate both sides of the panel.

Performance tackable acoustical fabric-covered skins

Tackable acoustical fabric-covered skins

Steel skins (12"H, 18"H, and 24"H have ribbed and perforated options)

Laminate skins

Wood skins

Tip: Wood skin sets are available for 42", 48", 54", and 66" panel heights.

Back painted glass skins

Markerboard skins

Slatwall

Windows

Technology skins

Answer allows a wide variety of skin arrangements to meet specific functional and aesthetic needs. Skins are not dedicated to a specific location and can be used anywhere on the face of the panel.

When planning skin segments, add skin heights together and add an additional 6" for total height.

Skins = 12" + 12" + 36" = 60"
 Trim = 6"
 Total = 66"H

3. Specify powerkits where you will need power.

Base Junctions—Square and Oval Trim

Base junctions complete the structure of panel packages and panel buildups. Answer panels always share a junction with adjacent panels. You order the style of junction you need separately. ▶ Specifying square and oval, page 410

Corner junction cap aligners ensure correct fit with adjacent panel top caps.

Opening in top of junction allows lay-in cable routing beneath top caps.

Slots in junction accept the panel's horizontal bars every 12", cable trays every 6", and powerkits every 12" vertically.

Slotted channels in junction accommodate worksurface supports and overhead storage components at 1" increments.

Trim is included with L, T, V, and end-of-run junctions to finish exposed surfaces. Trim is standard with paint and available with fabric wrapped or wood veneer options.

Large openings are used to route power through an L, T, X, V, or Y base junction.

Leveling glides adjust to install panels on uneven floors. Range is 2¾".

Junction cap is included with junction when needed. Caps are available in two styles: square or oval.

Skins attach to junction with concealed hardware.

Lay-in cable routing is accommodated in base area.

Product Details

Answer is available with three styles of top trim - thin, square, and oval. Base junctions are specified with desired style. Styles can not be mixed between adjacent panels.

End-of-run base junction includes junction, vertical trim, and junction cap. Select square or oval style trim. End-of-run trim adds 1" to footprint.

In-line base junction includes junction and plastic top cap aligner. Select square or oval style trim.

L-base junction includes junction, vertical trim, junction cap, and plastic top cap aligner. Select square or oval style trim.

Actual Dimensions

Depth 3"

Height 28⁷/₁₆"*, 40³/₄", 47", 53¹/₈", 65¹/₂", and 77³/₈"

*Note: Wall-start junctions are not available 28⁷/₁₆".

T-base junction includes junction, vertical trim, junction cap, and two plastic top cap aligners. Select square or oval style trim.

Y-base junction includes junction, junction cap, and two plastic top cap aligners. Select square or oval style trim.

X-base junction includes junction, junction cap, and three plastic top cap aligners. Select square or oval style trim.

V-base junction includes junction, vertical trim, junction cap, and plastic top cap aligner. Select square or oval style trim.

Wall-start junction secures to the stud in a structural wall or drywall fasteners can be used. Vertical trim is not needed. Also used in off-module applications. Wall-start junction does not add any dimension to panel run.

An **in-line top cap aligner** is included with in-line junctions. Select square or oval style.

Quick lock on both ends of the panel's horizontal connecting bars engage the junction in a tight structural connection.

Base junctions can accept a stacking junction of the same type only. *Example: An L-base junction will accept an L-stacking junction.*

Floor anchor brackets are available to secure junctions to the floor to prevent panel movement. Brackets are intended for use in seismic zones and may require additional code approvals.

Junction stabilizer bracket can be used to add rigidity to a panel run or when using a Universal sliding door. Bracket must be bolted to a concrete floor. For junctions manufactured before October 10, 2011 use TS7SB. For junctions manufactured on or after October 10, 2011 use TS7SBNJ.

Bracket foot is visible on one side of panel when installed.

Junction stabilizer bracket blocks power routing in the panel base and just above the base areas. The bracket covers the slots on the junction where the powerkit connects in these two zones. It also blocks the ability for a powerkit harness, pass-through powerkit, or modular harness to route in the base area from an adjacent panel.

Junction stabilizer bracket also blocks lay in of cables in base area of panel.

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Panels can support work-surfaces, shelves, and bins.

Wiring and Cabling

Lay-in cable routing is accommodated in the top of junctions. Lay-in cable and power routing is accommodated in base area.

Base Junctions—Square and Oval Trim, continued

As an alternative to lay-in cable routing, horizontal routing of power and cables can be accommodated through openings in junctions.

Junction tall sleeves can be ordered to cover the exposed metal edges in the large cable routing opening of junctions. Tall junction sleeve can only be used on junctions manufactured on or after October 10, 2011.

Lay-in junction cable sleeves can be added in the field to cover the exposed metal edges in lay-in cable space.

Modular harnesses that are 43" or 80" are available to change the height at which you are routing power kits or to route power from the panel base to different heights.

Surface Materials

Base junction

- Black paint
- Tip: Junction is hidden when properly installed.*

Junction cap—Square

- Paint
- Wood

Junction cap—Oval

- Plastic
- Wood

Vertical trim

- Paint (standard)
- Fabric (option)
- Wood (option only if wood junction cap is specified.)

Tip: Answer panel wood trims are only available with quarter-cut finishes with the exception of maple finishes. Maple on wood trims is only available with flat-cut finishes. For ordering simplicity, both flat-cut and quarter-cut finishes can be specified on panel trims. However, for all finishes except maple, if a flat-cut finish is selected, the trims will have the coordinating quarter-cut finish. For maple finishes, if quarter-cut is selected, the trims will have the coordinating flat-cut finish. Blending panel trims with other wood products that have flat-cut finishes may be visually acceptable for most applications. If a more exact match is desired for non-maple finishes, please specify quarter-cut finishes for the entire project. If a more exact match is desired for maple finishes, please specify flat-cut finishes for the entire project.

Fabric application is standard in the warp horizontal direction. Warp vertical direction is available as an option.

▶ See *Specification Guidelines for Directional Fabrics*, page 697, for more information.

Application Topics

Stacking junctions can be used with any height base junction.

Stability Guidelines

for application rules.
▶ See page 142

Carpet gripper glide caps may be added to panel glides to help hold panel in place (used only on junctions manufactured on or after October 10, 2011).

Change-of-Height—Square and Oval Trim

Change-of-height trim is available for base panels and stacking panels. It is used in in-line and corner applications.
 ▶ Specifying square and oval, page 432

Stacking change-of-height trim has a straight bottom edge to fit on top of standard change-of-height trim.

Oval standard change-of-height trim has a rounded bottom edge to fit the curve of top caps.

Top cap on lower panel must be change-of-height. Remember to specify the change-of-height top cap option on the lower panel for either square or oval trim applications.

Square standard change-of-height trim has a square bottom edge to fit square top caps.

Junction cap is included with standard change-of-height trim. Cap is available in two styles - square and oval.

Plastic aligner is included with stacking change-of-height trim.

Top cap from base panel is used to trim the top of the stacked panel.

L-junction application square trim

L-junction application oval trim

Product Details

In-line application

Corner application

Square standard slim trim includes junction cap. In-line or corner application must be specified. Available in 12"H, 18"H, 24"H, 30"H, and 36"H.

In-line application

Corner application

Oval standard slim trim includes junction cap and top cap filler. Plastic filler is not the same filler that ships with cable-routing trim. In-line or corner application must be specified. Available in 12"H, 18"H, 24"H, 30"H, and 36"H.

Stacking slim trim

includes plastic aligner and works with both square and oval trim styles. Available in 12"H, 18"H, and 24"H.

Actual Dimensions

	Standard slim profile	Stacking slim profile	Standard cable-routing	Stacking cable-routing
Depth	3"	3"	3"	3"
Width	1 1/8"	1 1/8"	2 1/4"	2 1/4"
Height	12 ⁵ / ₃₂ ", 18 ⁵ / ₁₆ ", 24 1/2", 30 ¹¹ / ₁₆ ", and 36 ⁷ / ₈ "	12 ⁵ / ₃₂ ", 18 ⁵ / ₁₆ ", and 24 1/2"	12 ⁵ / ₃₂ ", 18 ⁵ / ₁₆ ", 24 1/2", 30 ¹¹ / ₁₆ ", and 36 ⁷ / ₈ "	12 ⁵ / ₃₂ ", 18 ⁵ / ₁₆ ", and 24 1/2"

Square standard cable-routing trim includes junction cap. In-line or corner application must be specified. Available in 12"H, 18"H, 24"H, 30"H, and 36"H.

Oval standard cable-routing trim includes junction cap and top cap filler. Plastic filler is not the same filler that ships with slim trim. In-line or corner application must be specified. Available in 12"H, 18"H, 24"H, 30"H, and 36"H.

Stacking cable-routing trim includes plastic aligner and works with both square and oval trim styles. Available in 12"H, 18"H, and 24"H.

36"H standard change-of-height trim is the tallest trim available. If the area you need to trim is taller than 36"H, use stacking change-of-height trim.

Wiring & Cabling

Oval cable-routing trim allows lay-in cable routing in change-of-height applications.

Square cable-routing trim allows lay-in cable routing in change-of-height applications.

Surface Materials

Change-of-height trim

- Paint
- Fabric (option)
- Wood veneer (option)

Fabric application is standard in the warp horizontal direction. Warp vertical direction is available as an option.
▶ See *Specification Guidelines for Directional Fabrics*, page 697, for more information.

Square junction cap

- Paint
- Wood

Oval junction cap and filler

- Plastic
- Wood

Aligner

- Black plastic only

Application Topics

Change-of-height top cap option must be specified on the lower panel.

Square trim top caps have a notch in one or both ends to accommodate change-of-height applications.

Oval trim top caps are shortened on one or both ends to accommodate change-of-height applications.

Specify change-of-height top caps at one end unless the panel is adjacent to taller panels on both sides. Then specify a top cap change-of-height on both ends.

Specify the tallest height junction to connect your panels. A 66"H junction would be shared between these panels.

When stacking only one panel on your base panel with square or oval trim, always use standard change-of-height trim.

When stacking more than one panel on your base panel, use standard change-of-height trim on the first tier. Only the second tier requires stacking change-of-height trim.

Change-of-height fin wall with wood top trim must be at least 24" lower than the spine wall when using an Answer or Universal overhead bin on both sides of the fin wall.

Off-Module Panel Connector—Square and Oval Trim

Off-module panel connectors allow a fin wall to be attached off-module to a spine wall in 1" increments.

► Specifying, page 420

Top brackets attach to top horizontal connecting beam and secure top of the wall-start junction. If fin wall is 12", 18", or 24" shorter than spine wall, the top horizontal connecting bar can be lowered to attach brackets.

Wall-start junction must be ordered separately.

Bottom bracket attaches to lower horizontal connecting beam and secures to lower portion of bottom channel.

Bottom channel has slots in 1" increments to attach panel off-module. Channel must match width of panel and be attached between two junctions.

Bottom bracket for wall-start junction attaches the junction and bottom channel to secure the lower portion of the wall-start junction.

Product Details

Wall-start junctions connect to the off-module panel connectors to start a panel run off from the spine. Available in 42"H, 48"H, 54"H, 66"H, and 78"H. Wall-start junction must match the height of the fin wall. Wall-start junctions are ordered separately.

Connections

Off-module fin wall must always be the same height, or shorter than the spine wall.

When fin wall is more than 24" shorter than the spine wall, an additional horizontal beam must be added to the spine wall at the same height as the fin wall. Order a stacking horizontal frame kit.

Spine wall skins must be segmented with a seam matching the height of the shorter fin wall. This allows access to the top bracket and the spine wall horizontal beam.

Actual Dimensions

Width 22½", 34½", 40½", 46½", 58½", and 70½"

When stacking on the fin panel, the spine wall skins must be segmented with a seam matching the height of the fin base panel.

When stacking wall-start junctions in an off-module application, the off-module panel connector connects to the base wall-start junction.

Two off-module panels can be connected back to back at the same location.

When connecting two off-module fins at different heights on either side of the spine panel, an additional horizontal beam must be ordered and installed at the same height of the shorter fin panel.

An off-module fin wall cannot connect flush to the end of a panel in the spine wall. The closest connection point will leave a 3" tail on the spine including the end-of-run trim.

An off-module fin wall cannot attach at a junction in the spine wall. There is a 2" area of dead space on either side of the junction rendering a total of 4" dead space.

An off-module fin wall cannot be installed over a window that is located at the top of a spine panel.

Wiring & Cabling

Wiring and cabling components cannot be routed internally from a spine wall to an off-module fin wall without cutting openings in the spine wall skin.

Tip: It is recommended that you route wiring and cabling through the spine wall.

Internode power components should be used to bring power from the spine wall to the workstation.

► See *Context Specification Guide*.

Surface Materials

Off-module bracket

- Black paint

Tip: Bracket is hidden when properly installed.

Off-module installation requires field modification of the light seal on the top skin. Surface covering is not affected.

Application Topics

Stability Guidelines for Application Rules

► Page 142

Stacking junctions

can be used with any height base junction.

Bins, shelves, and workspaces cannot be attached off-module.

Off-module panel connector works with both square and oval style trims. Top cap filler included in package is only used with oval style trims. Square style trims do not require a top cap filler.

When using a wall-start junction manufactured before October 10, 2011 with an off module panel connector manufactured on or after October 10, 2011 the "old" bottom bracket must be used. It can be ordered from Service Parts, part number T500938MP. If using an old off-module panel connector manufactured before October 10, 2011 with a wall-start junction manufactured on or after October 10, 2011 the bottom bracket included with the off module panel connector should be used.

When using frameless glass on a spine panel with a same height off-module panel connections, the off-module cannot connect within 10" of an end of run or in-line junction connection.

Stacking Junctions—Square and Oval Trim

Stacking junctions allow you to adjust the panel heights within a workstation.
 ▶ Specifying square and oval, page 421

Junction top cap is standard on base panel junctions. Use the same top cap in stacking configurations.

Stacking junctions are always shared by adjacent panels. They are available for in-line, L, T, V, X, Y, end-of-run, and wall-start configurations.

Stacking horizontal frame package, specified separately, must be used with stacking junctions. Each package includes one horizontal connecting bar.

Stacking junction trim is included with L, T, V, and end-of-run stacking junctions. Stacking end-of-run trim adds 1" to footprint.

Plastic aligner is included with L, T, V, and end-of-run stacking junctions.

Fork connectors are included with stacking junction for proper connection to the base panel.

Top cap and junction cap from base panel are used to trim the top of the panel.

Slots in stacking junctions are identical to base junctions to accept horizontal connecting bars, power-kits, and cable trays.

Cables can be laid into top of base panel. During initial installation, it is important to keep cabling loose so it can be temporarily moved aside to install stacking fork connector at a later date.

Base panel must always have two horizontal connecting bars. The bars must be in place prior to adding fork connectors into the junction.

Product Details

All existing base panels can accept a stacking junction.

Aligner is included with fabric-wrapped vertical trim but may not be needed depending on the thickness of the fabric.

End-of-run stacking junction includes junction, fork connectors, vertical trim, and plastic trim aligner. End-of-run stacking trim adds 1" to footprint.

In-line stacking junction includes junction and fork connectors.

Actual Dimensions

Depth	3"
Height	12 ³ / ₈ ", 18 ¹ / ₂ ", and 24 ³ / ₄ "

L-stacking junction includes junction, fork connectors, vertical trim, and plastic trim aligners.

T-stacking junction includes junction, fork connectors, vertical trim, and plastic trim aligners.

X-stacking junction includes junction and fork connectors.

V-stacking junction includes junction, fork connectors, vertical trim, and plastic trim aligners.

Y-stacking junction includes junction and fork connectors.

Full L, T, V, and end-of-run square and oval vertical trim is available through Service Parts in 30", 42", 48", 54", 66", and 78" heights if a segmented visual on the trim is not desired.

Stacking change-of-height trim is used when you stack on a change-of-height configuration. The bottom edge of stacking trim is straight so it can join with the top of the standard change-of-height trim. Oval standard change-of-height trim is rounded at the bottom to fit around the top cap of the lower panel. Square standard change-of-height trim has a straight bottom edge to fit with square top trim.

► Page 434

Standard skins, cable trays, and powerkits are used in stackable solutions. To maximize the benefits of stackability, consider matching the skin height to the stacking junction height.

Connections

Skins on base panel do not need to be removed to install a stacking junction in most cases.

Fork connector is included with stacking junction for proper connection to the base panel. Two fork connectors are included with each in-line, end-of-run, L, and V stacking junctions, three are included with T and Y stacking junctions, and four are included with X stacking junctions. One fork connector is included with each wall-start stacking junction.

Fork connectors secure into the base junction. Stacking junction is bolted to fork connectors.

Wiring & Cabling

Lay-in cable routing at top of stacking junctions

Lay-in cable routing is accommodated in top of stacking junctions.

Junction tall sleeve can be ordered to cover the exposed metal edges in the large cable routing openings of junctions manufactured on or after October 10, 2011.

As an alternative to lay-in cable routing, horizontal routing of power and cables can be accommodated through openings in stacking junctions.

Powerkit installation for stacking components is the same process as for installation in base panels.

Surface Materials

Stacking junction

- Black paint
- *Tip: Junction is hidden when properly installed.*

Vertical trim

- Paint
- Vertical surface fabric (option)
- Wood veneer (option)

Stacking Junctions—Square and Oval Trim, continued

Application Topics

Stacking Stability Guidelines provides detailed information on applications.
▶ Page 142

Maximum height that can be stacked on a base panel is 36", consisting of one 24"H and one 12"H, or two 18"H stacking junctions.

Maximum height that an Answer panel configuration can reach is 90".

Maximum number of stacking junctions that can be added to a base panel is two.

Any height base panel can be used with stacking junctions.

Bins and shelves can hang from the first stacked tier only.

For initial installations order the appropriate top cap for your stacked segment, while you are specifying the base panel.

Change-of-Height Top Cap Standard Top Cap

For retrofit installations you will have to order a new top cap through Service Parts based on application changes.

When adding stacking junctions to base panels made prior to January 2000, you must replace vertical trim on end-of-run base junction. We recommend replacement of L base junction trim and standard change-of-height trim because the new trim can be easily removed, while the existing trim will be trapped by the stacking junction. To determine if you have trim made prior to January 2000, remove trim piece. If there are hooks at the top of your trim, you need to replace it. Replacement trim is available through Service Parts.

Consolidation point kit cannot be used with stacking components.

Base Horizontal Frame Packages—Square and Oval Trim

Base horizontal frame packages include horizontal connecting bars that lock into vertical junctions and complete the structure of a panel. A top cap and pair of base trims are also included. Cable tray and base cable tray are available as options.

► Specifying square and oval, pages 436 and 438

Top cap snaps onto top of panel skins. Two styles of top cap are available - square and oval. Top caps to accommodate change-of-height are also available. Wood veneer is available as an option.

Quick lock connects horizontal bars to vertical junctions for quick assembly.

Horizontal connecting bars lock into vertical junctions. The top bar can be lowered in 12" increments to a maximum of 24" from the top position. The bottom bar must always be positioned in the lowest slot in a junction.

Optional cable tray can be used for additional support of cables. Additional cable trays can be installed and arranged at various heights within the frame for communications access and cable routing.

Base trim is available with or without knockouts. Knockout dimensions are 1 3/8"H by 2 5/8"W.

Base trim with knockouts accommodates power and communication terminations. Top knockout is for power, bottom knockout is for communication. Filler to close unused openings is available from Service Parts (TS7BTFSR).

Optional base cable tray can be used to support lay-in of cables.

Product Details

Horizontal frame packages are available when you want to build up your own panel. The package includes all the components of a panel except the skins so you can order the skins separately to mix combinations of skin surface materials and colors. These frame packages do not include vertical junctions. Cable trays and base cable trays are optional.

Two horizontal connecting bars must be used in each base panel.

Horizontal bars determine panel width. They are not dedicated to a specific panel height; any horizontal bar can be used or reused with any junction height.

Top horizontal bar may be lowered to allow for a 12"H, 18"H, or 24"H glass window or consolidation point kit to be placed at the top of the panel. Bottom horizontal bar in base panel must remain in lowest position.

Actual Dimensions

Width 17 15/16", 23 15/16", 29 15/16", 35 15/16", 41 15/16", 47 15/16", 59 15/16", and 71 15/16"

Base trim height 3 3/4"

Receptacle Opening

Width of opening 2 5/8"

Height of opening 1 3/8"

Top caps are available in three styles - thin, square, and oval. This section is about square and oval trims. Horizontal frame packages should be specified with square or oval trim. Thin, square, and oval top caps can not be mixed between adjacent panels.

Omit top cap option is available on square trims and should be selected when adding a frameless glass screen to the top of the panel or when spanning a single top cap across multiple panels.

Spanning top caps are available for square style trims.

When spanning a single top trim across multiple panels, select the omit top cap option and specify a spanning top cap separately. Top cap width must match total width of spanned panels.

Spanning top caps can only be used in an in-line condition. They cannot span over a corner junction.

Spanning top caps can be used on any panel height.

In-line spanning top cap lightseals should be specified separately for each in-line panel joint the top cap spans.

Omit base trim option should be selected when using skins to the floor or open base trim.

Base trims are available with or without knockouts. Base trims with knockouts accommodate power and communication terminations. Plain base trims with no knockouts do not.

Open base trims are available. They do not accommodate power and data routing or entry in the base. Open base trim can only be added on a junction manufactured on or after October 10, 2011.

Open base trims are specified by omitting base trims and ordering open base trim kit separately.

Open base trims occupy the same space as the standard base trims. Open base trims occupy the bottom 3/4" of the panel; the height of the opening is 2 1/2".

Cable tray can be positioned every 6" vertically above the base to support cable routing.

Cable tray can accept added cable carriers attached below tray to expand horizontal cable management options. ▶ See *Montage Specification Guide* for cable carrier (ZCC).

Base cable tray is used only in the base to support lay-in cable routing in the base. Base cable tray cannot be used if omit base trim option is selected for one or both sides of panel or if open base trim is used.

Connections

Quick lock on both ends of the panel's horizontal connecting bars engage the junction in a tight structural connection.

Wiring & Cabling

Vertical lay-in cable routing

Vertical lay-in cable routing can be accommodated behind skins.

As an alternative to lay-in cable routing, vertical routing of power and cables through panel interior can be accommodated by openings in horizontal connecting bars. Also, see lay-in utility packages for vertical lay-in of power and cables. ▶ Page 170

Feed-through horizontal connecting bar cable sleeves can be added in the field to finish the exposed metal edges of vertical cable pass-through openings.

Knockouts in base trim can be removed in the field where needed. Knockout dimensions are 1 3/8"H by 2 5/8"W.

Communication outlets attach to openings in panel base trim. Order communication outlets from an outside vendor. Knockouts for communication in base accommodate modular furniture size only.

Base Horizontal Frame Packages—Square and Oval Trim, continued

Surface Materials

Top cap and base trim

- Paint color chosen on base trim will also apply to the top cap. They are not chosen independently.
- Wood veneer (option on top cap)

Tip: Answer panel wood trims are only available with quarter-cut finishes with the exception of maple finishes. Maple on wood trims is only available with flat-cut finishes. For ordering simplicity, both flat-cut and quarter-cut finishes can be specified on panel trims. However, for all finishes except maple, if a flat-cut finish is selected, the trims will have the coordinating quarter-cut finish. For maple finishes, if quarter-cut is selected, the trims will have the coordinating flat-cut finish. Blending panel trims with other wood products that have flat-cut finishes may be visually acceptable for most applications. If a more exact match is desired for non-maple finishes, please specify quarter-cut finishes for the entire project. If a more exact match is desired for maple finishes, please specify flat-cut finishes for the entire project.

Horizontal connecting bars

- Black paint
- Tip: Components are hidden when properly installed.*

Application Topics

Use a cable tray to provide extra support for 60"W and 72"W full skins where people may lean against the panel.

Base Horizontal Frame
Packages—Square and
Oval Trim

Stacking Horizontal Frame Packages—Square and Oval Trim

Stacking horizontal frame package provides structural stability for stacking junctions.

► Specifying, page 439

Horizontal connecting bar is included with each stacking horizontal frame package.

Each stacking segment must have one horizontal connecting bar.

Exception: If a window is used with stacking junctions, a horizontal connecting bar is not needed.

Each stacking junction is specified separately.

► Page 421

Skins, ordered separately, are added to both sides of stacking frame.

Actual Dimensions

Width 17¼", 23¼", 29¼", 35¼", 41¼", 47¼", 59¼", and 71¼"

Product Details

Stacking horizontal frame package includes one horizontal connecting bar. Stacking junction is not included.

Stacking horizontal frame package is available in eight widths— 18", 24", 30", 36", 42", 48", 60", and 72"—to match panel width. These horizontal connecting bars are identical to those in horizontal frame packages and can be re-used with any type of junction.

Connections

Quick-lock mechanism on the horizontal connecting bar engages the stacking junction in a tight structural connection.

Base panel must always have two horizontal connecting bars.

Wiring & Cabling

Vertical lay-in cable routing

Vertical lay-in cable routing can be accommodated behind skins.

Vertical routing of power and cables through panel interior is accommodated by openings in horizontal connecting bars.

Feed-through horizontal connecting bar cable sleeves can be added in the field to finish the exposed metal edges of vertical cable pass-through openings.

Power kit installation for stacking components is the same process as for installation in base panels.

Surface Materials

Stacking horizontal frame package

- Black
- Tip: Components are hidden when properly installed.*

Application Topics

When stacking a 12"H, 18"H, or 24"H window, a stacking horizontal frame package is not needed. Remember, the base panel always has two horizontal connecting bars for support.

When double stacking junctions, each stacking junction must have a horizontal beam.

No more than two windows can be stacked on top of each other.

Consolidation point kit cannot be used with stacking components.

Stacking horizontal frame package is used when additional horizontal bar is needed in off-module application. See off-module guidelines.

Stacking Stability Guidelines provides detailed information on applications.
▶ Page 142

Frameless Glass Screens—Square Trim Only

Frameless glass screen can be added to the top of a panel to help define space and provide some privacy while still providing access to natural light and promoting communication between adjacent workers.

► Specifying, page 441

Product Details

Frameless glass screen is secured to horizontal connecting bar by supports below the top cap and brackets above the top cap. Two brackets are used above the top cap to attach the glass to the panel on 24"–60"W panels. Three brackets are used on panels 78" and wider.

Frameless glass can be used on panels with thin or square profile trim.

Frameless glass kit includes glass screen, brackets, supports, and top cap with holes to accommodate brackets.

Gap between adjacent glass screens is $\frac{1}{4}$ ".

Actual Dimensions

Glass Width – standard: $23\frac{3}{4}$ ", $29\frac{3}{4}$ ", $35\frac{3}{4}$ ", $41\frac{3}{4}$ ", $47\frac{3}{4}$ ", $59\frac{3}{4}$ ", $71\frac{3}{4}$ ", $77\frac{3}{4}$ ", $83\frac{3}{4}$ ", $89\frac{3}{4}$ ", and $95\frac{3}{4}$ "

Glass Width – change-of-height one end square trim: $22\frac{1}{2}$ ", $28\frac{1}{2}$ ", $34\frac{1}{2}$ ", $40\frac{1}{2}$ ", $46\frac{1}{2}$ ", $58\frac{1}{2}$ ", $70\frac{1}{2}$ ", $76\frac{1}{2}$ ", $82\frac{1}{2}$ ", $88\frac{1}{2}$ ", and $94\frac{1}{2}$ "

Glass Height: $11\frac{3}{4}$ "

Glass Thickness: $\frac{3}{8}$ "

Surface Materials

Glass

- 6500 Clear Glass
- 6530 Frosted Glass

Tip: Frosted glass is a laminated construction. There may be variation in color, texture, and finish between the sample of 6530 Frosted Glass and the actual product.

Brackets

- Paint

Top cap

- Paint
- Wood veneer

Application Topics

Frameless glass screen can be placed on the top of a panel only. Top beam in the panel must be located in the top position of the frame in order to support frameless glass. Frameless glass can be used on base panels or stacking panels.

Frameless glass screen cannot be used when a window is located in the top position of the panel.

Change-of-height top cap option is available to allow for positioning of glass next to change-of-height trim on one side only. Glass is shortened and top cap provided supports change-of-height slim one end only.

When using frameless glass on a 48" H panel in a change-of-height condition with a taller panel, the taller panel must use a 48" H base junction and stacking junction to achieve the taller height to allow correct upper horizontal beam placement.

Frameless glass screen will not fit between two change-of-height trims.

Frameless glass kit is available without glass screen to accommodate customer's own glass. See chart of field installed glass size requirements for specific dimensions required for glass to fit in frameless glass brackets. Steelcase recommends the use of safety glass meeting ANSI 297.1 for field installed glass. Check with your local building authority for requirements in your area.

A single frameless glass screen can span over two or more panels.

90" and 96" wide frameless glass screen kits include three brackets. Two brackets attach to supports below the top cap. The third bracket attaches only to the top cap through a hole that is drilled in the top cap by the installer on site.

In-line spanning top cap lightseal must be specified separately when used in this application. Spanning top cap lightseal attaches to underside of top cap to fill space between skin lightseals. Specify one for each in-line junction the frameless glass screen spans.

A template tool is available from Service Parts (T511082SR) to assist in locating where holes are to be drilled on the beam of an existing panel to allow supports to be attached. This only applies to beams produced prior to September 2009. Beams produced after this date include holes to allow frameless glass supports to be attached.

Field-Installed Glass Size Requirements

Style Number	Maximum Height	Maximum Width	Thickness Range (min-max)
Standard			
TS71224SFG	11 3/4"	23 3/4"	.350-.400"
TS71230SFG	11 3/4"	29 3/4"	.350-.400"
TS71236SFG	11 3/4"	35 3/4"	.350-.400"
TS71242SFG	11 3/4"	41 3/4"	.350-.400"
TS71248SFG	11 3/4"	47 3/4"	.350-.400"
TS71260SFG	11 3/4"	59 3/4"	.350-.400"
TS71272SFG	11 3/4"	71 3/4"	.350-.400"
TS71278SFG	11 3/4"	77 3/4"	.350-.400"
TS71284SFG	11 3/4"	83 3/4"	.350-.400"
TS71290SFG	11 3/4"	89 3/4"	.350-.400"
TS71296SFG	11 3/4"	95 3/4"	.350-.400"
Change-of-Height – one end slim			
TS71224SFG	11 3/4"	22 1/2"	.350-.400"
TS71230SFG	11 3/4"	28 1/2"	.350-.400"
TS71236SFG	11 3/4"	34 1/2"	.350-.400"
TS71242SFG	11 3/4"	40 1/2"	.350-.400"
TS71248SFG	11 3/4"	46 1/2"	.350-.400"
TS71260SFG	11 3/4"	58 1/2"	.350-.400"
TS71272SFG	11 3/4"	70 1/2"	.350-.400"
TS71278SFG	11 3/4"	76 1/2"	.350-.400"
TS71284SFG	11 3/4"	82 1/2"	.350-.400"
TS71290SFG	11 3/4"	88 1/2"	.350-.400"
TS71296SFG	11 3/4"	94 1/2"	.350-.400"

Tip: Field installed glass should always be tempered. Laminated glass must not be used.

When using frameless glass on a spine panel with a same height off-module panel connections, the off-module cannot connect within 10" of an end-of-run or in-line junction connection.

12"H Panel Top Screens

For Use on Panels with Square Trim

Panel top screen can be field-installed over a painted or wood square panel top cap to provide extra visual privacy.

► Specifying, page 442

Translucent screen has internal ribbed design. External screen surface is flat.

Panel top screen allows the user to control privacy by adding or removing the translucent screen and support brackets.

Support brackets provide stability and mount to square panel top cap. Brackets must always be used with translucent screen.

Actual Dimensions

Depth (screen)	5/16"
Width (screen)	27 1/2", 33 1/2", 39 1/2", and 45 1/2"
Height (screen)	12"

Product Details

Panel top screens are available in 24"W, 30"W, 36"W, 42"W, and 48"W dimensions to correspond with most panel widths.

Panel top screen can be mounted on painted or wood square top caps.

Change-of-height screen option must be specified when using screen adjacent to change-of-height panel trim.

Panel screen will not fit between change-of-height on both sides.

Wiring & Cabling

Power and cables cannot be routed or accessed in a panel top screen.

Surface Materials

Panel top screen

- Translucent plastic

Tip: Double wall construction and internal ribbing structure make screen read whiter and more opaque than other translucent materials.

Support brackets

- Paint

Application Topics

Support brackets

must always be used with translucent screen included with this package. Other screen materials cannot be used with these brackets.

12"H Panel Top Screens

For Use on Panels with Oval Trim

Panel top screen can be field-installed over a painted oval panel top cap to provide extra visual privacy.

► Specifying, page 442

Panel top screen allows the user to control privacy by adding or removing the translucent screen and support brackets.

Support brackets provide stability and mount to oval panel top cap. Brackets must always be used with translucent screen.

Translucent screen has internal ribbed design. External screen surface is flat.

Actual Dimensions

Depth (screen)	5/16"
Width (screen)	27 1/2", 33 1/2", 39 1/2", and 45 1/2"
Height (screen)	12"

☒ 4/19 = Last order entry
April 14, 2019

Product Details

Panel top screens are available in 30"W, 36"W, 42"W, and 48"W dimensions to correspond with most panel widths.

Panel top screen cannot be mounted on wood top caps.

Wiring & Cabling

Power and cables cannot be routed or accessed in a panel top screen.

Surface Materials

Panel top screen

- Translucent plastic

Tip: Double wall construction and internal ribbing structure make screen read whiter and more opaque than other translucent materials.

Support brackets

- 6623 Metallic plastic ☒4/19

Application Topics

Support brackets must always be used with translucent screen included with this package. Other screen materials cannot be used with these brackets.

Panels—Square and Oval Trim

Panel Packages—Square and Oval Trim

Panel packages include two monolithic fabric skins and a horizontal frame package.

Tip: Answer panels always share a junction with adjacent panels. Order the style of junction you need separately.

► Specifying, page 444

Top cap snaps onto top of panel skins. Top caps are available in two styles – square or oval. Change-of-height top caps to accommodate change-of-height cable routing are also available. Wood veneer top cap is available as an option on both square and oval trim. Omit top cap is available as an option on square trim only.

Power can be field-installed every 12" vertically using powerkits.

Junctions, ordered separately, are always shared by adjacent panels. They are available for in-line, L, T, V, X, Y, and end-of-run configurations. Wall-start junctions and off-module connector brackets are also available.

Optional cable tray can be used for additional support of cables. Additional cable trays can be installed and arranged at various heights within the frame for communications access and cable routing.

Skins attach to frame without tools and can be removed and repositioned easily. They are not dedicated to a specific location.

Power and communication can be accessed by cutting skin in the field. Templates for cutting both receptacle and communication cutouts are available from Service Parts (T500940SR). Filler to close unwanted cutout in a skin is available from Service Parts (TS7STFSR).

Powerkits include powerblocks attached to a supporting power tray. ► Page 182

Base cover has knockouts to accommodate power and communication terminations. Top knockout is for power, bottom knockout is for communication. Filler to close unwanted knockouts is available from Service Parts (TS7BTFSR).

Horizontal connecting bars lock into the vertical junctions at the top and the bottom location to provide structural stability for the panels.

Optional base cable tray can be used to support lay-in of cables.

Actual Dimensions

Depth	3"
Width	17 ⁵ / ₆₄ ", 23 ⁵ / ₆₄ ", 29 ⁵ / ₆₄ ", 35 ⁵ / ₆₄ ", 41 ⁵ / ₆₄ ", 47 ⁵ / ₆₄ ", 59 ⁵ / ₆₄ ", and 71 ⁵ / ₆₄ "
Height	41 ³ / ₄ ", 47 ¹⁵ / ₁₆ ", 54 ¹ / ₈ ", and 66 ⁷ / ₁₆ "

Order panel packages to create common panel configurations quickly and easily.

- 1. Specify a panel package** of the width and height you need and with either square or oval top caps.

Note: Cable trays and base cable trays are optional.

- 2. Order vertical junctions** to complete panel packages and to join panels in in-line, L, T, V, X, and Y configurations and to terminate an end-of-run. Junctions are available with either square or oval trim and are always ordered separately.

- 3. Specify powerkits where you will need power.** You can specify a powerkit as an option on the panel package, or you can order powerkits separately.

Fabric-Covered Panel Skins

Performance Tackable Acoustical Fabric-Covered Skins and Tackable Acoustical Fabric-Covered Skins

Performance tackable acoustical fabric-covered skins and tackable acoustical fabric-covered skins finish the appearance of a panel. Skin combinations can vary to accommodate a variety of appearances and functions of the workspace. *Note: A sound-blocking barrier is added to the back side of the performance tackable acoustical skins.*

- ▶ Specifying, page 450
- Tip: When specifying skins, the total skin height will be 6" less than the panel height. For example if the panel is 54"H the total skin height will be 48"H. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.*
- ▶ See Panel Buildups, page 16, for more information.

Connections

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Skins are available in standard heights and to the floor heights. Standard height skins are not dedicated to a specific location.

Skins sized to go to the floor extend to the bottom of the panel. They can be used on one or both sides of the panel. They can only be used in the bottom position. *Tip: Omit base trim option should be selected on the panel frame when using a skin to the floor.*

Actual Dimensions

Width	17 ⁵³ / ₆₄ ", 23 ⁵³ / ₆₄ ", 29 ⁵³ / ₆₄ ", 35 ⁵³ / ₆₄ ", 41 ⁵³ / ₆₄ ", 47 ⁵³ / ₆₄ ", 59 ⁵³ / ₆₄ ", and 71 ⁵³ / ₆₄ "
Height Standard Size	12 ²³ / ₆₄ ", 18 ⁷ / ₁₆ ", 24 ³ / ₄ ", 30 ¹³ / ₁₆ ", 37 ⁵ / ₆₄ ", 43 ¹ / ₄ ", 49 ⁷ / ₁₆ ", and 61 ¹³ / ₁₆ "
Height To the Floor Size	28 ³³ / ₆₄ ", 34 ⁵ / ₈ ", 40 ⁷ / ₈ ", 42", 47 ¹ / ₁₆ ", 53 ¹⁵ / ₆₄ ", and 65 ¹⁹ / ₃₂ "

Wiring & Cabling

Powerkits are available in widths that correspond to panel widths.

Faceplate is used to surround receptacle when field-cutting fabric skins.

Faceplate, ordered separately, is used to surround modular furniture size communication outlet when field-cutting fabric skins.

NEMA-size communication outlets can be installed on the face of a panel skin without using a faceplate, but just the screws. Order communication outlets from an outside vendor. NEMA-size communication outlets cannot be used in the base.

Surface Materials

Skins

- Fabric

Fabric application is standard in the warp horizontal direction. Warp vertical direction is available as an option. Exceptions to this include:

- 72" wide standard and to the floor skins can only accommodate fabric in the horizontal direction.
- 60" high to the floor skins can only accommodate fabric in the vertical direction.
- 48" high to the floor skins accommodate select fabrics in the vertical direction only.

▶ See *Specification Guidelines for Directional Fabrics*, page 697, for more information.

Application Topics

Panel buildups

- ▶ Page 16

Steel Panel Skins

Steel panel skins finish the appearance of a panel. Skin combinations can vary to accommodate a variety of appearances and functions of the workspace.

► Specifying, page 454

Tip: When specifying skins, the total skin height will be 6" less than the panel height.

For example if the panel is 54"H the total skin height will be 48"H. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

► See Panel Buildups, page 16, for more information.

Actual Dimensions

Width 17⁵³/₆₄" , 23⁵³/₆₄" , 29⁵³/₆₄" , 35⁵³/₆₄" , 41⁵³/₆₄" , 47⁵³/₆₄" , 59⁵³/₆₄" , and 71⁵³/₆₄"

Height 12⁹/₃₂" , 18⁷/₁₆" , 24⁴¹/₆₄" , 30¹³/₁₆" , and 37"

Height To the Floor Size 28²⁹/₆₄" , 34⁵/₈" , and 40¹³/₁₆"

Connections

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Skins are available in standard heights and to the floor heights. Standard height skins are not dedicated to a specific location.

Skins sized to go to the floor extend to the bottom of the panel. They can be used on one or both sides of the panel. They can only be used in the bottom position.

Tip: Omit base trim option should be selected on the panel frame when using a skin to the floor.

Wiring & Cabling

Power and communication cannot be accessed in steel skins.

Surface Materials

Skins

- Painted steel
- Ribbed steel (option)
- Perforated steel (option)

Application Topics

Panel buildups

▶ Page 16

Horizontal connecting bars will be visible when perforated skins are used on the panel.

When specifying the perforated option, order perforated skins for both sides of the panel to maximize the visual aesthetic.

Perforated skins cannot be used in installation with steel or ribbed steel skins made prior to July 10, 2000.

Markerboard Surfaces for Steel Skins

Markerboard surface

adheres to steel skins to provide a writing surface for dry erase markers.

► Specifying, page 456

Magnetic border on back of markerboard affixes to steel skin. Markerboard surface can be removed and repositioned.

Write on markerboard surface with dry erase markers only.

Product Details

Not for use on steel panels with the ribbed surface.

For best adhesive performance, place magnetic markerboard on skin with the largest dimension horizontal.

Markerboard surface, can adhere to additional steel products such as universal steel storage.

Surface Materials

- **Markerboard**
- White only

Actual Dimensions

Width 23⁴⁵/₆₄" , 29⁴⁵/₆₄" , 35⁴⁵/₆₄" , 41⁴⁵/₆₄" , and 47⁴⁵/₆₄"

Height 12⁵/₃₂" , 24¹/₂" , and 36⁷/₈"

Note: Markerboard heights and widths can also be specified parametrically.

Markerboard Skins

Markerboard skins finish the appearance of a panel and provide a writing surface for dry erase markers.

Tip: When ordering skins to the floor an F suffix will be added to the end of the style number. The total height will still be 6" less than the panel height. Using the same example, if the panel is 54"H, 48" of skin height will need to be specified.

► Specifying, page 457

Markerboard skins can be removed and repositioned. They are not dedicated to a specific location.

Skin is steel construction and can accept magnets to display and share information.

Skins sized to go to the floor extend to the bottom of the panel. They can be used on one or both sides of the panel. They can only be used in the bottom position.

Tip: Omit base trim option should be selected on the panel frame when using a skin to the floor.

Wiring & Cabling

Power and communication cannot be accessed in markerboard skins.

Surface Materials

Markerboard skin

- White only

Application Topics

Panel buildups

- Page 16

General cleaning instructions:

- Wipe board with a clean cloth moistened with a high-quality whiteboard cleaner.
- Use high-quality dry erase markers to avoid poor erasability. Avoid low odor.
- Replace markers when almost dry to avoid poor erasability.
- Replace the eraser felt regularly. Dirty felt or erasers will result in poor erasability.

Tip: Boards used moderately should be cleaned two to three times a week. Boards used more intensely may require daily cleaning.

Connections

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Actual Dimensions

Width 17⁵³/₆₄" , 23⁵³/₆₄" , 29⁵³/₆₄" , 35⁵³/₆₄" , 41⁵³/₆₄" , 47⁵³/₆₄" , 59⁵³/₆₄" , and 71⁵³/₆₄"

Height 12⁹/₃₂" , 18⁷/₁₆" , 24⁴/₆₄" , 30¹³/₁₆" , and 37"

Height 28²⁹/₆₄" , 34⁵/₈" , and 40¹³/₁₆"

To the Floor Size

Slatwall Skins

Slatwall skins have horizontal channels that support Steelcase worktools and accessories on 1" increments. Maximum load on skin is 80 pounds.
 ▶ Specifying, page 459

Product Details

Slatwall skins can be removed and repositioned. They are not dedicated to a specific location.

Wiring & Cabling

Power and cables cannot be accessed in a slatwall skin.

Back-to-back slatwall skins cannot be installed at the top of a panel when using a ceiling access lay-in utility package.

Surface Materials

- Paint

Application Topics

Accessories are available for use on slatwall skins.
 ▶ For additional information, refer to *Steelcase Worktools Specification Guide*.

Slatwall channels will not align when the top of a 12"H slatwall skin is adjacent to the top of an 18"H or 24"H slatwall skin.

Actual Dimensions

Width	23 ¹³ / ₁₆ " , 29 ¹³ / ₁₆ " , 35 ¹³ / ₁₆ " , 41 ¹³ / ₁₆ " , and 47 ¹³ / ₁₆ "
Height	12 ⁹ / ₁₆ " , 18 ¹ / ₂ " , and 24 ¹¹ / ₁₆ "

Slatwall channels will align when the bottom of a 12"H slatwall skin is adjacent to the bottom of an 18"H or 24"H slatwall skin.

Binder bin or shelf can be hung in front of a slatwall skin. If two bins or shelves are hung side-by-side in front of slatwall skins, the top hook must use either the third or fourth full slot down from the top. The first and second full slots from the top will not accept side-by-side shelves.

Escape mid storage cannot be placed in front of a slatwall skin.

Binder bin or shelf can be upmounted on slatwall skin as long as there is not another bin or another slatwall skin on the adjacent in-line panel.

Slatwall skins cannot be hung next to a cantilever or on module end panel.

Slatwall skins cannot be used in the bottom 12" of an Answer panel.

Off-module work surface to panel connector cannot be used in front of or on the adjacent panel at the same elevation as a 12"H or 24"H slatwall skin.

Slatwall skin brace package is required when mounting a flat panel monitor arm on an Answer slatwall skin.

One single or dual monitor arm can be mounted on 12"H slatwall skin that has an installed brace package.

Up to two single monitor arms can be mounted on 18"H or 24"H Answer slatwall skin that has an installed brace package. For optimal stability, the monitor arm should be mounted as shown below:

Laminate Skins

Laminate skins attach to frames to finish the appearance of a panel and can be used in combination with any other skin type.

► Specifying, page 461

Tip: When specifying skins, the total skin height will be 6" less than the panel height. For example if the panel is 54"H the total skin height will be 48"H. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but are taller in actual height to cover the base trim area.

► See *Panel Buildups*, page 16, for more information.

Laminate skins consist of a laminate surface captured by a painted metal trim border on all sides.

Laminate skins are non-tackable.

Skins can be removed and repositioned.

Individual laminate skins are available for use in monolithic applications or in combination with other types of skins on the same frame.

Connections

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Skins are available in standard heights and to the floor heights.

Standard heights are not dedicated to a specific location.

Skins sized to go to the floor extend to the bottom of the panel. They can be used on one or both sides of the panel. They can only be used in the bottom position.

Tip: Omit base trim option should be selected on the panel frame when using a skin to the floor.

Actual Dimensions

Width	23 ⁵³ / ₆₄ " , 29 ⁵³ / ₆₄ " , 35 ⁵³ / ₆₄ " , 41 ⁵³ / ₆₄ " , and 47 ⁵³ / ₆₄ "
Height Standard size	12 ⁷ / ₃₂ " , 18 ³ / ₈ " , 24 ³⁷ / ₆₄ " , 30 ³ / ₄ " , 36 ¹⁵ / ₁₆ " , 43 ¹ / ₈ " , 49 ¹⁹ / ₆₄ " , and 61 ²¹ / ₃₂ "
Height To the floor size	28 ²⁷ / ₆₄ " , 34 ⁵ / ₈ " , 40 ²⁵ / ₃₂ " , 47" , 53 ⁹ / ₆₄ " , and 65 ¹ / ₂ "

Woodgrain and directional laminate patterns run vertically.

Wiring & Cabling

Power and communication cannot be accessed in laminate skins.

Surface Materials

- Laminate skins**
- Laminate (standard)
 - Open Line laminate (option)

- Trim**
- Paint

Wood Skins and Wood Skin Sets

Wood skins and wood skin sets attach to frames to finish the appearance of a panel and can be used in combination with any other skin type.

► Specifying, page 464
 Tip: When specifying skins, the total skin height will be 6" less than the panel height. For example if the panel is 54"H the total skin height will be 48"H. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

► See Panel Buildups, page 16, for more information.

Wood skin sets contain specific combinations of sizes and are used when segmenting all wood skins on 42"H, 48"H, 54"H, or 66"H panels. The use of sets ensures the correct cathedral wood grain alignment of all segmented skins on a frame.

Wood skins consist of a wood veneer surface captured by a painted metal trim border on all sides.

Wood skins are non-tackable.

Skins can be removed and repositioned.

Connections

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Skins are available in standard heights and to the floor heights.

Standard heights are not dedicated to a specific location.

Skins sized to go to the floor extend to the bottom of the panel. They can be used on one or both sides of the panel. They can only be used in the bottom position.

Tip: Omit base trim option should be selected on the panel frame when using a skin to the floor.

Wiring & Cabling

Power and communication cannot be accessed in wood skins.

Surface Materials

Wood skins and wood skin sets

- Natural wood veneer (standard)
- Customiz stain (option)

Trim

- Paint

Actual Dimensions

Width	23 ⁵³ / ₆₄ " , 29 ⁵³ / ₆₄ " , 35 ⁵³ / ₆₄ " , 41 ⁵³ / ₆₄ " , and 47 ⁵³ / ₆₄ "
Height Standard size	12 ⁷ / ₃₂ " , 18 ³ / ₈ " , 24 ³⁷ / ₆₄ " , 30 ³ / ₄ " , 36 ¹⁵ / ₁₆ " , 43 ¹ / ₈ " , 49 ¹⁹ / ₆₄ " , and 61 ²¹ / ₃₂ "
Height To the floor	28 ²⁷ / ₆₄ " , 34 ⁵ / ₈ " , 40 ²⁵ / ₃₂ " , 47" , 53 ⁹ / ₆₄ " , and 65 ¹ / ₂ "

Back Painted Glass Skins

Back painted glass skins attach to frames to finish the appearance of a panel and can be used in combination with any other skin type.

- ▶ Specifying, page 476

Tip: When specifying skins, the total skin height will be 6" less than the panel height. For example, if the panel is 42"H the total skin height will be 36"H. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

- ▶ See *Panel Buildups*, page 16, for more information.

Individual back painted glass skins are available for use in monolithic 30"H and 42"H panel applications or in combination with other types of skins on the same frame.

Skins can be removed and repositioned.

Back painted glass skins consist of a back painted glass surface captured by a painted metal trim border on all sides.

Back painted glass skins are non-tackable.

Skins are available in standard heights and to the floor heights.

Standard heights are not dedicated to a specific location.

Skins sized to go to the floor extend to the bottom of the panel. They can be used on one or both sides of the panel. They can only be used in the bottom position.

Tip: Omit base trim option should be selected on the panel frame when using a skin to the floor.

Application Topics

A magnetic backer is available as an option on all skin sizes. There is a 2³/₈" dead zone around edge with magnetic backer option.

Tip: Rare earth magnets should be used with the magnetic backer.

Wiring & Cabling

Power and communication cannot be accessed in glass skins.

Surface Materials

Glass skins

- Back painted glass

Trim

- Paint

Connections

Skins extend onto junction and meet skin of adjacent panel. The slotted channel of the junction is accessible between these two skins.

Tip: Back painted glass skins do not attach to wall start junctions.

Actual Dimensions

Width	17 ⁵³ / ₆₄ ", 23 ⁵³ / ₆₄ ", 29 ⁵³ / ₆₄ ", 35 ⁵³ / ₆₄ ", 41 ⁵³ / ₆₄ ", 47 ⁵³ / ₆₄ ", 59 ⁵³ / ₆₄ ", and 71 ⁵³ / ₆₄ "
Height standard size	127 ³² / ₃₂ ", 18 ³ / ₈ ", 24 ³⁷ / ₆₄ ", 30 ³ / ₄ ", and 36 ¹⁵ / ₁₆ "
Height to the floor	28 ²⁷ / ₆₄ ", 34 ⁵ / ₈ ", and 40 ²⁵ / ₃₂ "

Technology Skins and Covers

Technology skin provides easy access to power and cabling behind the skin.
 ▶ Specifying, page 480

Skin is made of steel, slatwall, or markerboard.

Cutout is positioned at receptacle location.

Technology cover is specified separately and can accommodate a receptacle and a NEMA or DECORA communication port.

Product Details

Technology skins are available in 24" to 72" widths to match standard panel widths.

Technology skins are available in steel, ribbed steel, fabric over steel, slatwall, or markerboard. Not all materials are available on all skin heights or widths.

Technology skins 30" or under are available with all cutouts or with only right- or left-hand cutouts.

60"W and 72"W skins will have double cutouts and can be optioned to have them on both sides, right hand only or left hand only.

6"H technology skin has an option to omit all cutouts.

Slatwall technology skins include a painted trim for each cutout that is used behind the technology cover. It is painted to match the skin.

Slatwall technology skins must follow the same vertical placement rules as slatwall skins.

▶ See page 126 for Vertical Placement Rules.

Actual Dimensions

Width 23⁵³/₆₄" , 29⁵³/₆₄" , 35⁵³/₆₄" , 41⁵³/₆₄" , 47⁵³/₆₄" , 59⁵³/₆₄" , and 71⁵³/₆₄"

Height 6¹/₈" , 12⁹/₃₂" , and 18⁷/₁₆"

Thickness 1³/₃₂"

Technology cover accommodates both power only and power communication. Technology cover includes all necessary adapters and fillers needed for both applications. When expressing communication only, receptacle covers are available through Service Parts (891700204MP).

Connections

Skin attaches to junctions with the same clip used on all Answer skins.

Technology covers snap on to the powerkit after receptacle is installed.

Wiring & Cabling

Standard modular powerkits must be used with technology skins and covers. They cannot be used with hardwire kits.

Top opening of cover accommodates a NEMA or modular communication port and have been designed around ANSI/TIA-569-C standards for furniture mounted communication faceplates that snap into furniture openings or knockouts. Communication ports can never be back-to-back. Cover also includes a filler if no communication is being used.

Receptacle cover is available through Service Parts (891700204MP) to cover the receptacle opening if no receptacle is specified.

Surface Materials

Technology skins-6"H

- Painted steel
- Fabric covered steel (option)

Technology skins-12"H and 18"H

- Painted steel
- Ribbed steel (option)
- Fabric covered steel (option)
- Slatwall-painted
- Markerboard

Fabric application is standard in the warp horizontal direction. Warp vertical direction is available as an option.

▶ See *Specification Guidelines for Directional Fabrics*, page 697, for more information.

Technology covers

- 6000 Black
- 6009 Arctic White
- 6249 Platinum Solid
- 6654 Sand
- 6697 Fog

Application Topics

24"W skin

24"W technology skins have one cutout. Communication ports cannot be supported back to back, so in this skin width, communication can only be accommodated on one side of the panel at the same elevation.

All 36"W, 42"W, and 48"W technology skins have one or two cutouts. The right-hand cutout can accommodate power only or power and communication. Left-hand cutout can only accommodate the power.

All 30"W, 60"W, and 72"W technology skins have one or two cutouts. For each double cutout the right-hand opening can accommodate power only or power and communication. Left-hand cutout can only accommodate the power.

Number of technology covers specified must match the number of cutouts in a skin.

If using powerkits shipped prior to April 2000 in an existing application, power and communication cover must be placed on the left-hand side of the technology skin.

6"H technology skin can only be used in the position just above the work-surface. The skin includes powerkit brackets to be used to reposition the powerkit location on the junction.

When using a 6" technology skin on one side of the panel (only used at worksurface height) a 12" or 18" technology skin cannot be used on the opposite side of the panel at the same location as the 6"H skin.

6"H technology skins cannot be used on a 30" high panel.

6"H technology skins with no cutouts can be used in any 6" position on the panel with the exception of the bottom 12" of the panel.

18"H technology skins must be planned in 12"H increments from the bottom of the panel to align with powerkit locations.

Slatwall technology skins must follow applicable slatwall skin vertical placement rules.

▶ See page 126 for rules.

Technology skin cover fillers are available to allow technology skin cover to work with technology skins manufactured before October 10, 2011. Fillers are available for single or double cutouts and are painted.

Slatwall skin brace package is required when mounting a flat panel monitor arm on an Answer slatwall technology skin.

One single monitor arm can be mounted on a 12"H or 18"H slatwall technology skin with a single cutout. The skin must have an installed brace package.

Shared Components

Glass Windows

Glass windows provide a visual space definition, yet allow light to pass through the workstation. They are available in single pane or double pane. Also available is a single pane kit that ships without glass and is used with custom glass, ordered separately.

► Specifying, page 486

Safety glass is provided, unless custom glass window kit is ordered.

Metal frame is painted and fully assembled.

Product Details

Glass window is secured by brackets in the window frame.

Wiring & Cabling

Power and cables cannot be routed vertically or accessed in a glass window.

Top channel of a window used in the top position of a panel can accommodate lay-in cable routing beneath top cap.

Surface Materials

Frame

- Paint

Single-pane window

- 6500 Clear Glass
- 6530 Frosted Glass

Double-pane window

- 6530 Frosted Glass

Tip: Frosted glass is a laminated construction. There may be variation in color, texture, and finish between the sample of 6530 Frosted Glass and the actual product.

Application Topics

12"H, 18"H, and 24"H glass windows

can be placed in the top position of a panel by either using stacking junctions, or by lowering the top horizontal connecting bar (24" maximum) in the base panel.

► See *Stability Guidelines* for rules regarding stacking and glass windows, page 142.

A 24"H glass window installed in the top of a base panel cannot accommodate any windows stacked on top. Tackable acoustical skins and steel skins can be stacked.

Actual Dimensions

Depth	2 ⁷ / ₈ " (single pane) and 3 ¹ / ₆₄ " (double pane)
Width	23 ⁵ / ₆₄ ", 29 ⁵ / ₆₄ ", 35 ⁵ / ₆₄ ", 41 ⁵ / ₆₄ ", 47 ⁵ / ₆₄ ", 59 ⁵ / ₆₄ ", 71 ⁵ / ₆₄ ", 77 ⁵ / ₆₄ ", 83 ⁵ / ₆₄ ", 89 ⁵ / ₆₄ ", and 95 ⁵ / ₆₄ "
Height	12 ⁹ / ₃₂ ", 18 ⁷ / ₁₆ ", and 24 ⁴ / ₆₄ "

No more than two windows may be stacked on top of each other.

Glass window cannot be used at the base of a panel.

Hanging components cannot be hung in front of a double-pane window.

Hanging components cannot be used next to a double-pane window at a 90° corner.

Open design upmount bin and shelf bracket cannot be used when double-pane window is in top position of panel.

Sliding panel door cannot be used when a double-pane window is used in the host panel.

When installing windows, you must consider ceiling height. Windows slide into junctions from the top and require clearance above the panel.

A single glass window can span over two or more in-line panels.

Spanning windows should be used in the top position only.

Spanning window in-line support must be specified separately when spanning windows. One support is used at each in-line junction to provide a light seal and help support the window.

Spanning windows of any width cannot be stacked on top of each other.

When a spanning window is used, it is recommended that the same size spanning top cap also be specified for use on the window.

When double stacking junctions, at least one of the stacking junctions must be connected with a horizontal beam.

When ordering a 72"W or wider single pane window kit to be used with steel or fabric skins located directly below it, two clips (T521328SR) should be ordered and installed on the top edge of the skins.

Field-Installed, Single-Pane Custom Glass Kits will accommodate 4 mm – 6 mm glass

Frame Size	Style Number	Height	Width	Maximum Thickness
12"H	24"W TS71224SCW	9.760"	21.280"	0.245"
	30"W TS71230SCW	9.760"	27.280"	0.245"

Sliding Panel Doors

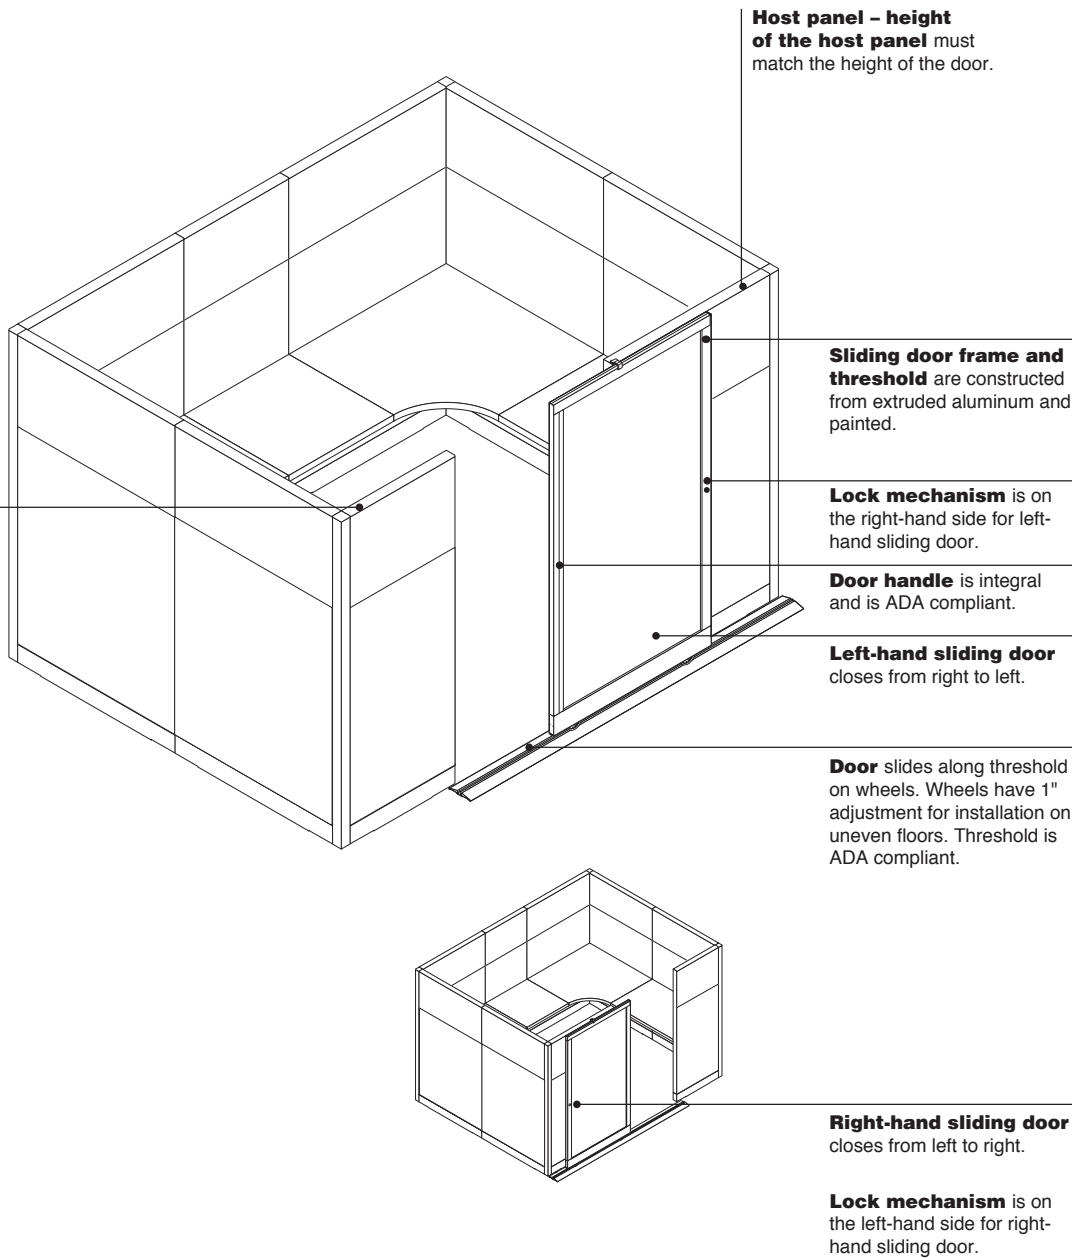

Sliding door is handed and can be added to workstations for additional privacy.
 ▶ Specifying, page 490

Door must be installed on the outside of the workstation.

Door is attached to the host panel only; therefore, the stability of the door is closely related to the stability of the host panel.

Sliding door can be specified with lock option. Specify lock cylinder and key separately.

Receiving panel – height of receiving panel must match height of the door.

Actual Dimensions

Door height	66" and 78"
Door width	36" and 42"
Door thickness	1 1/4"

Product Details

Sliding door is handed. Right-handed sliding door or left-handed sliding door must be specified.

Sliding door can be specified with lock option. Specify lock cylinder and key separately.

Door infill is standard in ribbed, translucent plastic. Clear tempered glass and white laminated glass are available as options.

Surface Materials

Frame and door track

- Paint

Door infill

- 6625 Translucent Plastic
- 6500 Clear glass
- 6541 White laminated

Application Topics

Sliding door is not free-standing. It must mount to panels.

Door is attached to the host panel only. Therefore, the stability of the door is closely related to the stability of the host panel.

► See Guidelines for Sliding Door Applied to Answer, page 158.

Door track is attached to both host panel and opposite panel.

Height of door must match height of host panel - 66"H or 78"H.

Match the width of the host panel to the width of the door, if possible.

When attaching the sliding door to an

Answer panel, a junction stabilizer bracket is available for added rigidity to the host panel. If a host and/or receiving panel run exceeds 4', a junction stabilizer bracket must be applied to the door end of the host and/or receiving panel run. On long runs, apply a junction stabilizer bracket or perpendicular panel every 8'.

Sliding panel door cannot attach to a host panel with a double-pane window.

Sliding panel door cannot attach to a stacking junction. Host panel must be a single base junction.

Fence Connectors, Posts, and Beams

Fence connectors

attach Post and Beam perpendicular to Answer panels forming a fin wall support.

► Specifying, page 492

Connector engages in the vertical slot. The connector is handed to make this attachment on either the left- or right-hand side of the frame.
Tip: Left-hand fence connector pictured.

Minimum beam length is 4'. Maximum beam length is 10'.

Post attaches to beams in in-line, L-, T-, X-, or Y- (120°) configurations.

Product Details

Connector occupies vertical slots in the frame 32½" measured up from the bottom edge of the base trim.

Large post base is 8½" in diameter. Small post base is 4½" in diameter.

Large post base can be anchored to floor for additional stability.

Leveling capability is provided by 3" adjustability between the post and base extension (included with post). A height-adjustment jack is available through Service Parts (946800103SR) for leveling ease on large installations.

Post base shims, ordered separately, can be used under post base to raise to the appropriate carpet level.

Beams may be field cut to any dimension. An anchor block drilling fixture must be ordered through Service Parts (946800102SR) to place new anchor block holes in the correct position after cutting.

When attaching screens to Post and Beam fence, remember to order attachment hardware separately.

Fence dust covers can be inserted into top T-slot on fence beam. Dust covers come in 10-foot lengths and can be cut to size in the field.

Connections

Fence connector is mounted within the module width of the frame. Horizontal space within that frame is reduced by 1¼".

Width of panel-mounted worksurfaces is affected by this change in module.

Monolithic skins and lower segmented skins up to 32½" measured from the bottom of the base trim, are trapped by the fence connector once installed on the panel frame. Base trim is not trapped.

Cantilevers cannot occupy the same vertical slots as the fence connector bracket.

Fence connector cannot be used when panels are stacked and loaded with bins and shelves.

Fence connector cannot be placed between two slatwall skins.

Actual Dimensions

	Fence Connectors	Posts	Beams
Depth	2"	4"	1¾"
Width	1¾"	4"	3¼", 4", 5', 6', 7', 8', 9', 10'
Height	32½"	33"	8½"
Leveling mechanism range	N.A.	3"	N.A.

Screens can be mounted above or below beams for privacy or modesty.

Vertical post tube is available to conceal power harnesses and communication cables routed between panel and fence.

Surface Materials

Fence connector

- 8043 Clear Anodized aluminum only

Post top cap

- 6694 Slate plastic only

Vertical post tube

- 6644 Fusion Dark plastic only

Shelves are additional storage surfaces that sit above the work surface. The shelves are 35 1/4" high.

Horizontal fence tubes provide power and cable management at the fence beam locations.

Infill is a fabric screen that stretches from overhead beam to floor, from overhead beam to fence beam, or from fence beam to floor.

Tether brackets can be used to side support work surfaces.

Use of tether brackets as side supports further reduces horizontal space available by 1 1/2" each side and affects planning of mounted work surfaces.

Panel Foot

The panel foot supports up to a 48"H panel run free-standing without additional support from fin panels, tethered worksurfaces, or support legs.

► Specifying, page 495

A panel foot can also be used to make a panel run taller than 48"H feel more stable, but is not an alternative to a perpendicular panel or other panel support for stability purposes.

► See Stability Guidelines page 142, for more information.

Product Details

Panel foot attaches to end-of-run and in-line junctions to support a freestanding panel run.

Vertical attachment post is offset on the panel foot and allows for a choice of proud or inset installation at the end-of-run by rotating the panel foot.

Panel foot positioned proud of the end of run accommodates Series 3, 5, 7, and Airtouch height adjustable tables. It is used parallel to the panel without overlapping table supports and panel feet.

Panel foot positioned inset from the end-of-run provides a cleaner visual and accommodates Series 3, 5, 7, and Airtouch tables.

Panel foot will be centered on in-line junctions.

Panel foot only attaches to junctions manufactured on or after October 10, 2011.

Actual Dimensions

Width	3 1/4"
Length	21"
Height	5/8"

Glide for use with panel foot is included in the hardware package and installs in the field to maintain standard panel height and minimize the gap between the panel and floor.

Standard glides can be used in conjunction with the panel foot but will result in a 5/8" larger gap between the bottom of the panel and the floor.

Set screws in the end of the foot provide 1/4" of micro adjustment.

Surface Materials

- Foot
- Paint

Application Topics

Open base trim cannot be used in conjunction with a panel foot.

Top cap mounted storage is not permitted on freestanding panel runs supported by panel feet.

Panel hung storage is not permitted on freestanding panel runs supported by feet.

Slatwall skins are not allowed on freestanding panel runs supported by panel feet.

Wiring & Cabling

Panel foot blocks power routing in the panel base and just above the base areas. The vertical attachment post covers the slots on the junction where the powerkit connects in these two zones. It also blocks the ability for a powerkit harness, pass-through powerkit, or modular harness to route in the base area from an adjacent panel.

Multipurpose infeed connects power from the building floor into a panel run supported by panel feet. Conduit can be run under the panel or through a knockout in the basetrim, and must be attached to the bottom horizontal beam with 24206001SR strain relief bracket from service parts.

San Francisco power infeed can be used if liquid tight conduit is required. Plan to have a long enough infeed to attach to a modular power kit in the panel adjacent to the entry panel.

Power can be accessed in the third position up from the base through field cut fabric skins or technology skins.

Stability Guidelines

Answer, when installed properly, is an exceptionally stable furniture system. That applies to workstations using panels alone, panel-supported components, or freestanding furniture.

Counterweight packages for storage products are required to ensure product stability. ▶ See page 289 for *Counterweight Requirements for Storage Products*.

The following section on panel stability gives some guidelines to be used with common system furniture configurations. Guidelines are given to panels with and without components. Consult your local dealer or Steelcase representative prior to deviating from these guidelines.

When panel height exceeds six feet in seismic geographical areas rated at a 3 or 4, floor plans must be submitted to a certified structural engineering firm to assure the product application complies with applicable building codes. Steelcase is not responsible for consultation fees. Maximum allowable stacked panel height is 90".

Change-of-height has no effect on these stability guidelines unless otherwise specified.

There are several ways to anchor the end of a panel run:

With a return panel.

With a pedestal, pedestal filler, or a lateral file with a storage-to-panel connector.

With an end panel.

Guidelines for Sliding Panel Door Applied to Answer
▶ Page 158

Guidelines for Freestanding Panels Supported by Panel Foot
▶ Page 158

Guidelines for Answer Panel-Hung Components

These guidelines treat shelves and bins as interchangeable.

- If bins or shelves are applied at an elevation higher than 66", a perpendicular panel of same height (or up to 24" lesser height) is required.
- Top of universal sliding door bin is not designed to support the weight of a seated person.
- When ganging bins or shelves, the use of a tie plate is required.

In all cases, up to two panel-hung components may be used per panel, per side. These are some common applications:

Hanging one component on one side.

Hanging one component on each side.

Hanging two components on one side.

Hanging two components on each side.

When 24"W return panels are placed adjacent to each end of components, you may use up to four shelves or bins on a panel (without worksurfaces).

Three shelves or bins, 48" maximum vertical loading space including top.

48" min.

48" min.

Four shelves or bins, 60" maximum vertical loading space including top.

48" min.

Guidelines for "L" Configurations

Panels with Panel-Hung Components

If **A** is up to 12' or less, you need to have either a pedestal with filler, a jetty or bubble jetty worksurface, or an end panel on end. Maximum 8' of shelves or bins per panel run.

Guidelines for "T" Configurations

An 8' run with no panel-hung component does not require a return panel. For additional stability or longer runs, apply a junction stabilizer bracket every 8' bolted to a concrete floor.

In change-of-height configuration when panel A height is shorter than panel B height, a junction stabilizer bracket must be applied to the panel A.

When back painted glass is located on the return panels, the return panel height must be equal to or shorter than the spine panel height.

Note: The minimum spine length is 6'.

For runs over 8' up to 18', you must use at least a 30"W return panel.

When back painted glass skins are used on the spine panels, a rear facing return panel is required.

Guidelines for "T" Configurations, continued

Panels without Panel-Hung Components

For runs over 18', you must locate a 48"W perpendicular panel every 12'.

Panels with Panel-Hung Components Counterbalanced on Both Sides

If A is 4' long and B is 6' long, you must use an end panel and a cantilever.

If B is 6' to 12', you must use one center support panel per side. Maximum 8' of shelves or bins per panel run.

If B is up to 6' long, you can use cantilevers to support adjoining workspaces.

If B is up to 6' long, you can use cantilevers to support adjoining workspaces. Maximum 8' of shelves or bins per panel run.

Guidelines for Support Brackets: No Overheads or Panel-Hung Components

One end of panel run must be supported by:

- Panel that is minimum 24" wide.
- Tower with tall storage-to-panel connector (24" or 30"D)

Other end of panel run can be supported by:

- Open loop leg
- Closed loop leg
- Pedestal with filler
- End panel
- 1.5H or 2H storage with storage-to-panel connector
 - 18" or 24" deep cabinet in perpendicular application
 - 24" deep cabinet in parallel application
- Tower with medium storage-to-panel connector

24" deep worksurfaces:

- Can be completely supported by cantilever brackets or a combination of cantilever and side support brackets, pedestals, legs (post, open loop, closed loop), end panel support, and 1.5H storage with intermediate support.
- When using cantilevers to support a 24" deep worksurface, minimum return panel width is 30". Panel width can be reduced to 24" to match the worksurface depth if side support brackets are applied.

30" deep worksurfaces:

- Straight and transition worksurfaces require additional floor support along the front edge at each end, such as side support brackets, pedestal, or post leg.

Guidelines for Support Brackets: Overheads or Panel-Hung Components

Tip: Overhead bin or shelf cannot span over or be positioned over tower.

One end of panel run must be supported by:

- Panel that is minimum 24" wide.
- Tower with tall storage-to-panel connector (24" or 30"D)

Other end of panel run can be supported by:

- Open loop leg
- Closed loop leg
- Pedestal with filler
- End panel
- 1.5H or 2H storage with storage-to-panel connector
 - 18" or 24" deep cabinet in perpendicular application
 - 24" deep cabinet in parallel application
- Tower with medium storage-to-panel connector

24" deep worksurfaces:

- Can be completely supported by cantilever brackets or a combination of cantilever and side support brackets, pedestals, legs (post, open loop, closed loop), end panel support, and 1.5H storage with intermediate support.
- When using cantilevers to support a 24" deep worksurface, minimum return panel width is 30". Panel width can be reduced to 24" to match the worksurface depth if side support brackets are applied.

30" deep worksurfaces:

- Straight and transition worksurfaces require additional floor support along the front edge at each end, such as side support brackets, pedestal, or post leg.

Guidelines for Support Brackets

If A is between 8' and 10', side support brackets are required at each end of the run. Both ends of loaded panel run must be supported by perpendicular panels.

Note: Panel fin on one side can be replaced by a tower with a tall storage-to-panel connector as long as the tower is not outside the panel run and the overhead bin or shelf is not spanning over or positioned over the tower.

If A is greater than 10', side support brackets are required at both ends of each worksurface. Full height perpendicular panels need to support the loaded panels every 8'.

Guidelines for "U" Configurations

If A is 12' or less, no floor support is required mid-run. Maximum 8' of shelves or bins per panel run.

If A is between 12' and 16', some type of floor support is required mid-run. Maximum 8' of shelves or bins per panel run.

Guidelines for "X" Configurations

Panels without Components

For additional stability or longer runs, apply a junction stabilizer bracket every 8' bolted to a concrete floor.

Panels with Components

If panel is 6' or less, no center support is needed.

Center support panel is needed every 6'. Cantilevers can be used to tie spanner in. Maximum 8' of shelves or bins per panel run.

Guidelines for "V" Configurations

Panels with Components

If A is up to 12' or less, you need to have either a pedestal with filler, a jetty or bubble jetty worksurface, or an end panel on end. 30"D straight and transition worksurfaces require additional floor support along the front edge, such as a pedestal or post leg. Maximum 8' of shelves or bins per panel run.

"U" configuration must have a cantilever with the 120° V junction. The other end needs to be supported with a full-height panel, end panel, or a pedestal with filler.

No components can be hung on back side of panel run unless in a "Y" configuration.

When back painted glass skins are used on the spine panels a rear facing return panel is required.

Guidelines for "Y" Configurations

Panels without Components

For additional stability or longer runs, apply a junction stabilizer bracket every 8' bolted to a concrete floor.

Panels with Components

If panel is 6' or less, no center support is needed.

Center support panel is needed every 6'. Cantilevers can be used to tie spanner in. Maximum 8' of shelves or bins per panel run.

"Y" configuration must have an end panel with a connector bracket with the 120° Y junction. The other end needs to be supported with a full-height panel, end panel, or a pedestal with filler. For 24"D worksurfaces, the center can be supported by a cantilever when bins and worksurfaces are used on both sides (as shown). 30"D straight and transition worksurfaces require additional floor support along the front edge, such as a pedestal or post leg.

Note: When using cantilevers to support a 24" deep worksurface, minimum panel width is 30". Panel width can be reduced to 24" to match the worksurface depth if side support brackets are applied.

Guidelines for Bench Configurations without Top Cap Mounted Storage

Single Sided Bench

Double Sided Bench

End-of-run support options include:

- Post leg and cantilever
- Half loop leg
- Open loop leg
- Closed loop leg
- Worksurface end panel
- Pedestal with filler
- 1H, 1.5H, or 2H (18" on 24"D) cabinet with panel-to-storage connector in perpendicular application.
Note: 1H and 1.5H cabinet requires intermediate support.
- 1H, 1.5H, or 2H (24"D) cabinet with panel-to-storage connector in parallel application.
Note: 1H and 1.5H cabinet requires intermediate support.
- Tower with medium storage-to-panel connector

Maximum worksurface depth is 24" with front support every 12'.

30"D worksurfaces require legs in the front of each worksurface on both ends of the worksurface.

Center support panels cannot be used as supports.

Slim shelves and slatwall skins (including monitor arm attachment) can be applied, but bins and universal shelves are not allowed.

Guidelines for Bench Configurations with Top Cap Mounted Storage, continued

Single Sided Bench with Aisleway Top Cap Mounted Storage

For single sided bench with aisleway top cap mounted storage,

worksurface support must include at least one of the following:

- Pedestal with filler
- 1H, 1.5H, or 2H (18" on 24"D) cabinet with panel-to-storage connector in perpendicular application.
Note: 1H and 1.5H cabinet requires intermediate support.
- 1H, 1.5H, or 2H (24"D) cabinet with panel-to-storage connector in parallel application.
Note: 1H and 1.5H cabinet requires intermediate support.
- Tower with medium storage-to-panel connector

End-of-run support options include:

- Post leg and cantilever
- Half loop leg
- Open loop leg
- Closed loop leg
- Worksurface end panel
- Pedestal with filler
- 1H, 1.5H, or 2H (18" on 24"D) cabinet with panel-to-storage connector in perpendicular application.
Note: 1H and 1.5H cabinet requires intermediate support.
- 1H, 1.5H, or 2H (24"D) cabinet with panel-to-storage connector in parallel application.
Note: 1H and 1.5H cabinet requires intermediate support.
- Tower with medium storage-to-panel connector

For single sided bench applications with aisleway top cap mounted storage, worksurface depth must be 30"D.

30"D worksurfaces require legs in the front of each worksurface on both ends of the worksurface.

Center support panels cannot be used as supports.

Slim shelves and slatwall skins (including monitor arm attachment) can be applied, but bins and universal shelves are not allowed.

- 1 *Tip: The maximum panel height with Duo, Universal Laminate Enhanced storage, and Elective Elements storage is 48". The maximum panel height with c:scape storage is 42".*
- 2 *Tip: In aisleway applications, the back of the storage overhangs the panel 3.5".*
- 3 *Tip: Aisleway mounting can accept storage up to 17"D.*
- 4 *Tip: When using storage to panel connectors to support the panel application, the maximum distance between storage to panel connection is 6'.*

Guidelines for Bench Configurations with Top Cap Mounted Storage, continued

Double Sided Bench with Center Top Cap Mounted Storage

- 1 Tip: The maximum panel height with Duo, Universal Laminate, and Elective Elements storage is 48". The maximum panel height with c:scape storage is 42".
- 2 Tip: 10' max between legs when using legs and cantilevers to support panel.
- 3 Tip: When top cap storage is center maintained, the storage is shared equally on top of the panel.
- 4 Tip: Center mounting can accept storage up to 25"D.

End-of-run support options include:

- Post leg and cantilever
- Half loop leg
- Open loop leg
- Closed loop leg
- Worksurface end panel
- Pedestal with filler
- 1H, 1.5H, or 2H (18" on 24"D) cabinet with panel-to-storage connector in perpendicular application.
Note: 1H and 1.5H cabinet requires intermediate support.
- 1H, 1.5H, or 2H (24"D) cabinet with panel-to-storage connector in parallel application.
Note: 1H and 1.5H cabinet requires intermediate support.
- Tower with medium storage-to-panel connector

Maximum worksurface depth is 24" with front support every 10'.

30"D worksurfaces require legs in the front of each worksurface on both ends of the worksurface.

Center support panels cannot be used as supports.

Slim shelves and slatwall skins (including monitor arm attachment) can be applied, but bins and universal shelves are not allowed.

Guidelines for Post and Beam Fence

Maximum panel height: 78"H

Fences spaced no more than 10' apart can stabilize a wall.

Maximum panel height: 78"H
Maximum panel run: unlimited

Fences spaced no more than 10' apart can stabilize a wall with a single panel-mounted component installed on the same side as the fence for each 10' run.

Maximum panel height: 78"H
Maximum panel run: 16'

Fences spaced no more than 8' apart can stabilize a wall with upper storage.

When hanging components on a stacked frame, you cannot use a fence connector.

For proper stability, panel runs supported solely by Post and Beam fence on one side must be anchored to floor at the post base. To anchor to the floor, the large post base must be used. When supporting a panel application on both sides with Post and Beam fence anchoring to the floor is not required.

Tip: Application guidelines below still apply. When Post and Beam fence is not anchored to the floor, the application must meet additional Answer stability guidelines (example: worksurface supports or return panel).

Guidelines for Wall-Start Junction Configurations

Panels with Components

When using a wall-start junction, an end panel must be used with the wall-start junction and the other end must be supported by a full panel, an end panel, or a pedestal with a filler. For 24"D worksurfaces, the center can be supported by a cantilever. 30"D straight and transition worksurfaces require additional floor support along the front edge, such as a pedestal or post leg.

Wall hang channels for shelves and overhead storage bins cannot be used with a wall-start junction.

Tip: Wall-start junctions must secure to the stud in a building wall or use drywall fasteners.

Guidelines for Answer Off-Module Bracket Configurations

Panels with Components

"U" configuration

When using an Answer off-modular connector bracket, a cantilever must be used with the connector bracket. The other end needs to be supported with a panel, end panel, or a pedestal with filler. For 24"D worksurfaces, the center can be supported by a cantilever. 30"D straight and transition worksurfaces require additional floor support along the front edge, such as a pedestal or post leg.

Note: When using cantilevers to support a 24" deep worksurface, minimum panel width is 30". Panel width can be reduced to 24" to match the worksurface depth if side support brackets are applied.

"T" configuration

When using an Answer off-modular connector bracket, a cantilever must be used with the connector bracket. The other end needs to be supported with a panel, end panel, or a pedestal with filler. For 24"D worksurfaces, the center can be supported by a cantilever when bins and worksurfaces are used on both sides (as shown). 30"D straight and transition worksurfaces require additional floor support along the front edge, such as a pedestal or post leg.

Wall-start junction must match the fin panel height coming off the spine wall. Change-of-height trim is not available to cover exposed wall-start junction.

Loading on spine wall with change-of-height off-module fin

is allowed with a maximum of 12" height difference between spine and fin. No loading on spine is permitted if the spine is 24"H or higher than the off-module fin. End panels or a pedestal with a filler is required to support a worksurface attached to spine.

Guidelines for Sliding Panel Door Applied to Answer

Receiving Panel

- Height of receiving panel must match height of door.
- If receiving panel run exceeds 4', a junction stabilizer bracket must be applied to the door end of the receiving panel run. On long receiving panel runs, apply a junction stabilizer bracket or perpendicular panel every 8'.

Host Panel

- Height of host panel must match height of door.
- Match the width of the host panel to the width of the door.
- If host panel run exceeds 4', a junction stabilizer bracket must be applied to the door end of the host panel run. On long host panel runs, apply a junction stabilizer bracket or perpendicular panel every 8'.

Guidelines for Freestanding Panels Supported by Panel Feet

Single Panel

- 1 Tip: The maximum panel height is 48"H with up to an additional 12"H frameless glass screen.
- 2 Tip: Single panels supported by panel feet must be at least four feet wide.
- 3 Tip: Freestanding panel runs with multiple panels must have a panel foot every 10 feet.
- 4 Tip: A panel foot is required within three feet of the end of run.

Multiple Panel Run

Slim shelves, slatwall skins, and panel-hung or top cap mounted overhead storage bins are not allowed in panel foot supported applications.

Guidelines for media:scape Integration

For runs up to 12'6" that have return panels on the same side as the shared workspace, use at least a 30"W return panel that matches the height of the spine wall. For spine walls that exceed 66"H, a 30"W rear facing return panel is required. The monitor mount is not to exceed 66"H.
Tip: Monitor not included with media:scape assembly.

For runs up to 12'6" that have return panels on the opposite side as the shared workspace, use at least a 24"W return panel. The monitor mount is not to exceed 66"H.
Tip: Monitor not included with media:scape assembly.

Understanding Wiring and Cabling

All Answer electrical components are listed by Underwriters Laboratory (UL) and certified by the Canadian Standards Association (CSA).

Wiring Schematics

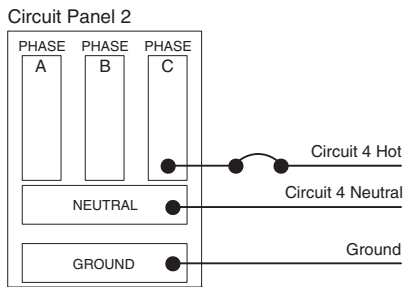

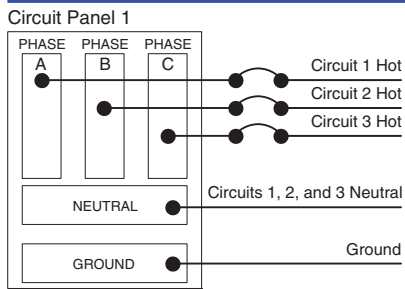

Details for the Electrician

Answer offers three different wiring schematics to allow you to match your specific wiring strategy to any typical building wiring plan.

Tip: All the components in an electrical system must use the same wiring schematic. The components are keyed and color coded to make it impossible to connect mismatched parts.

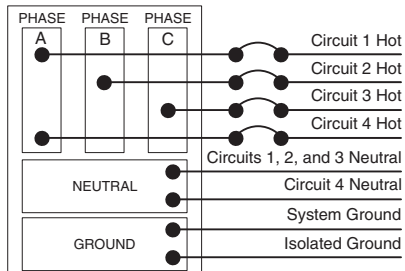

- Black = Four-circuit, 3+1
- Brown = Four-circuit, 2+2
- Rust = Three-circuit, separate neutrals (3SN)
- Shared neutrals = 10 gauge
- Non-shared neutrals = 12 gauge
- Hot wires = 12 gauge

Four-Circuit, 3+1

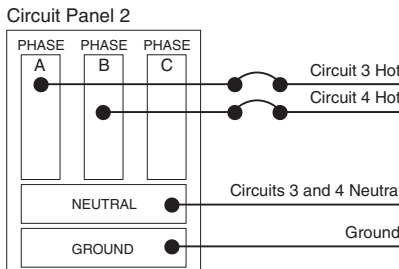

In the four-circuit 3+1 schematic, circuits 1, 2, and 3 are distributed from the first circuit panel and are supported with one shared neutral and one shared ground. Circuit 4 is distributed from a second circuit panel and is supported with a separate neutral and ground.

Single 3-Phase Circuit Panel

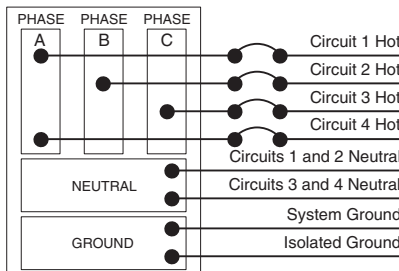

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Four-Circuit, 2+2

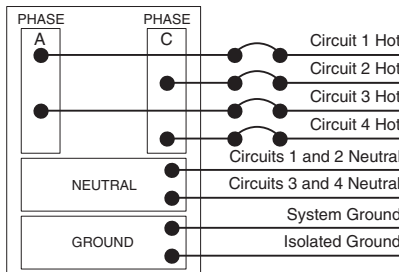

In the four-circuit 2+2 schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel and are supported with one shared neutral and one shared ground. Circuits 3 and 4 are distributed from a second circuit panel and supported by their own shared neutral and ground.

Single 3-Phase Circuit Panel

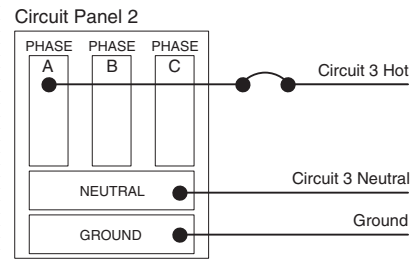

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Split-Phase Circuit Panel

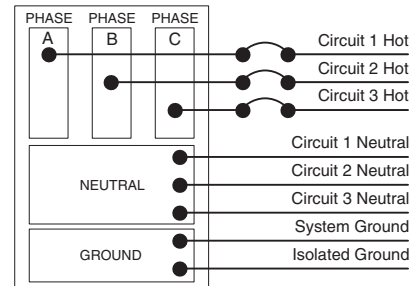

On a split-phase circuit panel, all four circuits are distributed as shown.

Three-Circuit, Separate Neutrals

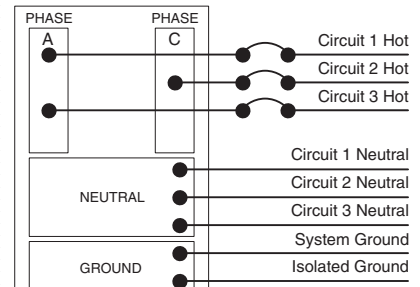

In the three-circuit, separate neutral schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel. Each circuit is supported with its own neutral and a common ground. Circuit 3 is distributed from the second circuit panel and is supported by its own neutral and ground.

Single 3-Phase Circuit Panel

On a single 3-phase circuit panel, three circuits are distributed as shown.

Split-Phase Circuit Panel

On a split-phase circuit panel, three circuits are distributed as shown.

How to Calculate Power Needs

Use This to Determine How Many Power-Ins You'll Need

When planning a power network, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

If your usage is not known in advance:

The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in and 40 receptacles for each 4-circuit power-in.

If your usage is known in advance:

Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60 amps (20 amps times 3 circuits) or 80 amps (20 amps times 4 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.

▶ See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

Approximate power consumption for common devices

• Device	• Wattage	• Amperage	• Voltage	• Number of Devices Supported on Single 20 Amp Circuit*
Laptop	90	0.8	110	20
CPU/Desktop Computer	120	1.1	110	15
Monitor	60	0.5	110	29
Phone	5	0.0	110	352
High Power Tablet (e.g. Surface Pro)	40	0.4	110	44
Low Power Tablet (e.g. iPad Air)	15	0.1	110	117
Desktop Printer	40	0.4	110	44
42" LCD Screen	210	1.9	110	8
DVD Player	25	0.2	110	70
Projector	175	1.6	110	10
Desktop Lamp	19	0.2	110	93
Large Printer/Copier (high)	1900	17.3	110	1
Large Printer/Copier (low)	850	7.7	110	2
Paper Shredder	360	3.3	110	5
Desktop Fan	20	0.2	110	88
Standing Fan	180	1.6	110	10
Coffee Maker (high)	1200	10.9	110	1
Coffee Maker (low)	600	5.5	110	3
Microwave (high)	400	13.6	110	1
Microwave (low)	150	5.5	110	3
Refrigerator (high)	1500	3.6	110	4
Refrigerator (low)	200	1.4	110	12
Vacuum (high)	1500	13.6	110	1
Vacuum (low)	200	1.8	110	9
Space Heater (high)	1500	13.6	110	1
Space Heater (low)	750	6.8	110	2

Tip: These calculations are estimations and are meant solely for informational purposes. It is important to conduct proper power planning for each installation to prevent overloading a circuit.

Cable Capacities

Test and verify capacities for your individual situation.

We recommend that testing be conducted using your specific cable, as well as the furniture configuration you are considering. Cable capacities in this table are based on actual cable studies performed by an independent contractor following EIA/TIA codes and practices and can be taken as an accurate assessment of maximum practical capacity. Actual cable capacities may vary slightly depending on which manufacturer produced the cable and the specific field conditions.

Cable capacities are based on Category 6 and Category 6a cables at 55% fill capacity for cable study performed on junctions manufactured on or after October 10, 2011.

Note: Tests were performed on junctions with tall sleeves installed.

Cables Tested

A CommScope Systimax Gigaspeed 1071E Series Category 6 Cable
OD=0.23"

B CommScope Systimax X10D 1091B Series Category 6A Cable
OD=0.285"

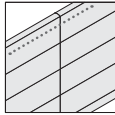

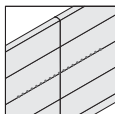

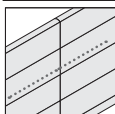

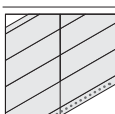

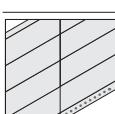

Power harnesses reduce cable capacity.

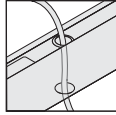

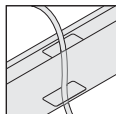

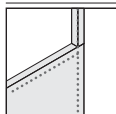

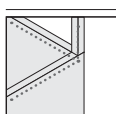

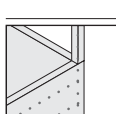

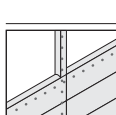

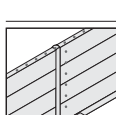

An average of 10-15 cables will be reduced per harness used. However, this number varies according to installation practices and the type of cables used.

If glass window is used at the top of a panel, top cap lay-in cable capacity is 20 for category 6 cables.

When laying cables vertically behind skins, capacity is dependent on skin width.

When using stacking junctions, the fork connector does not reduce cable capacity.

		A	B
Straight Horizontal Routing			
	Lay-in cable routing at top of panel (in-line junction)	40	30
	Horizontal pass-through (straight) at cable routing opening (available every 12" inside frame)	12	7
	Horizontal pass-through (straight) at rectangular opening for modular power harness (available every 12" inside frame)	72	47
	Lay-in cable routing at base of panel with power	36	22
	Lay-in cable routing at base of panel without power or with power harness routed above ▶ Page 86	48	30

	Horizontal pass-through (straight) at cable routing opening (available every 12" inside frames in X or Y configuration)	12	7		Lay-in cable routing (corner) at base of panel without power, or with power harness routed above in X or Y configuration ▶ Page 88	14	9

Ceiling-Access Lay-In Utility Package

Ceiling-access lay-in utility packages allow panels to accommodate a large amount of power and cable brought in from the ceiling. Standard skins are used to finish the panel.
 ▶ Specifying, pages 362 and 429

Utility carrier routes power and cables from the ceiling into the panel. Carrier is integrated within a panel run and does not exceed the width of the panel.

Utility carrier and cover stop at top of junction so cables can go in either direction.

Standard horizontal connecting bars are used on adjacent panels. Cables routed vertically can be laid behind panel skin or routed through the openings in the horizontal connecting bar. Power is routed vertically through the opening in the horizontal connecting bar.

Utility carrier and cover for thin is 96"H or can be field cut to size. Square and oval are adjustable from 60"H to 120"H. The pole's inside dimension is 3"D x 5⁵/₈"W.

Top cap is shortened to accommodate utility carrier and cover. Wood veneer is available as an option. Top cap is available in three styles - thin, square, or oval.

Narrow horizontal connecting bars allow modular harnesses and large bundles of cables to be routed vertically over the front of the bars.

Standard base trim is included with ceiling lay-in utility package.

Product Details

Ceiling-access lay-in utility package includes: utility carrier and cover with hardware, top cap, two lay-in horizontal connecting bars, and two base trims. Package is available in 30", 36", 42", and 48" widths to match standard panel widths. Package can be specified with thin, square, or oval top trim. Base cable trays are optional.

Ceiling attachment carrier and kit secures the top of the utility carrier and cover to the suspended ceiling grid. Hardwired connection to the building's power can be made in the junction box.

Ceiling-access lay-in utility package takes the place of a standard horizontal frame package. Don't double order.

Connections

Bracket attaches the utility carrier to the lay-in horizontal connecting bar.

Ceiling-access lay-in utility package can be installed in in-line, L, T, X, V, Y, and end-of-run panel configurations. End-of-run condition reduces cable capacity.

Quick-lock mechanism on the lay-in horizontal connecting bar engages the junction in a tight structural connection. Quick-lock mechanism is the same as on the standard horizontal connecting bars.

Wiring & Cabling

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Ceiling-access lay-in utility package was designed to be used with Answer power harnesses. If using any other type of conduit, the diameter of the conduit cannot be greater than 1/2". Skins will not install properly if conduit exceeds 1/2".

Square and oval change-of-height cable routing trim allows lay-in cable routing in change-of-height applications. Specify change-of-height top cap for the lower panel to allow clearance.

Power harness, ordered separately, acts as a shield to permit the ceiling-access lay-in utility package to accommodate power and communication cable routing at the same time.

Surface Materials

Utility carrier and cover, base trim, and top cap

- Paint
- Wood veneer (option on top cap only)

Lay-in horizontal connecting bars

- Black paint

Tip: Components are hidden when panel is properly installed.

Oval junction cap

- Plastic
- Wood veneer (included with wood top cap option)

Tip: Junction cap is included for end-of-run configurations.

Square junction cap

- Paint
- Wood veneer (included with wood top cap option)

Tip: Junction cap is included for end-of-run configurations.

Application Topics

Utility carrier and cover are designed to be located at either end of the panel. However, they can be installed in any location, but field cutting of the top cap will be required.

Utility carrier and cover cannot be located next to a taller panel.

Back-to-back slatwall skins cannot be installed at the top of a panel when using a ceiling access lay-in utility package. Slatwall can be used on one side only.

Windows cannot be installed in the top position of a lay-in frame.

Floor-Access Lay-In Utility Package

Floor-access lay-in utility packages allow panels to accommodate a large amount of power and cable brought in from the floor. Standard skins are used to finish the panel.

► Specifying, pages 363 and 430

Narrow horizontal connecting bars allow modular harnesses and large bundles of cables to be routed vertically over the front of the bars.

Base utility box covers power and cables entering from the floor.

Standard top cap is included with floor-access lay-in utility package. Top cap is available in three styles - thin, square, or oval. Wood veneer is available as an option.

Standard base trim is included and used on the side of the panel opposite from the base utility box.

Modified base trim is included and consists of two pieces to allow attachment of base utility box.

Product Details

Floor-access lay-in utility package includes: top cap, two lay-in horizontal connecting bars, base utility box with hardware, one standard base trim, and one modified base trim. Package can be specified with thin, square, or oval top trim. It is available in 30", 36", 42", and 48" widths to match standard panel widths.

Base utility box is positioned at the left-hand side of the modified base trim. Entry on the other end would be accomplished from the other side of the panel.

Floor-access lay-in utility package takes the place of a standard horizontal frame package. Don't double order.

Connections

Bracket attaches the base utility box to the lower lay-in horizontal connecting bar.

Floor-access lay-in utility package can be installed in in-line, L, T, X, V, Y, and end-of-run panel configurations. End-of-run condition reduces cable capacity.

Quick-lock mechanism on the lay-in horizontal connecting bar engages the junction in a tight structural connection. Quick-lock mechanism is the same as on the standard horizontal connecting bars.

Power infeed sits proud of the panel approximately 3" and will interfere with Universal storage with the Universal 3" base, FrameOne foot base, or c:scape glide.

Wiring & Cabling

24"W powerkit, ordered separately, can be used in the base of 36"W, 42"W, and 48"W floor-access lay-in utility packages. Power kit must be located to the right of the base utility box. No powerkit can be used in 30"W floor-access lay-in utility packages.

Power harness, ordered separately, is shielded to permit the floor-access lay-in utility package to accommodate power and communication cable routing at the same time.

Base utility box routes cables and/or Answer harnesses into the panel from the floor. Base power infeeds are not intended for use with the floor-access lay-in utility package.

Floor-access lay-in utility package can accommodate up to 80 cat 6 cables. Deduct 10-15 cables for each power harness or modular connector routed through the base utility box.

Surface Materials

Base utility box, base trim, and top cap

- Paint
- Wood veneer (option on top cap only)

Lay-in horizontal connecting bars

- Black paint
- Tip: Bars are hidden when panel is properly installed.*

Application Topics

Base utility box protrudes 4" from the base trim on one side of the panel. When planning, locate the base utility box underneath a workstation instead of a hallway.

Specify change-of-height top cap on your lay-in utility package if it is the lower panel in a change-of-height configuration.

Base utility box is for routing of cable and power only. Not to be used as a termination point or for the routing of power cords.

Utility Pole—Thin Trim

Utility pole—thin trim brings power and cabling from the ceiling and introduces it into a panel with thin trim only through openings positioned vertically every 12". Junction is not included as utility pole connects into the existing panel junction (used with junctions manufactured on or after October 10, 2011).
 ▶ Specifying, page 361

Utility pole is flush with the footprint of the panel.

Product Details

Ceiling attachment kit secures the top of the utility pole to the suspended ceiling grid. Hardwired connection to the building's power can be made in the junction box.

Power harness for use with utility pole is available to bring power down from the ceiling and into the panel to make a modular connection to a power kit.
Tip: Power harnesses are ordered separately from the utility pole.

Utility pole can extend up to 8' above the connection point (two panels at highest height) of the panels.

Shield on power harness permits a utility pole to accommodate power and communication cable routing at the same time. For applications where more cable routing is needed, you can use the utility pole without a power harness or use a lay-in utility package.

Connections

Utility pole—thin trim works with base and stacking junctions. It can be used at an L, T, or X configuration. It cannot be used in an end-of-run, V, Y, or in-line configuration. Utility pole is not shipped with a junction.

"L" application requires two panels at the same height. Utility pole is flush with the panel run.

"T" application requires at least two panels at the highest height. Utility pole is flush with the panel run.

"X" application requires two panels at the same height.

Wiring & Cabling

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

All Answer electrical components are listed by Underwriters Laboratory (UL) and certified by the Canadian Standards Association (CSA).

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Chicago and New York have special requirements.

Junction with Utility Pole

Utility pole brings power and cabling from the ceiling and introduces it into the panel through openings positioned vertically every 12 inches. Includes a junction and replaces the need to order one separately.
▶ Specifying, page 426

Utility pole extends beyond the footprint of the panel.

Product Details

Ceiling attachment kit secures the top of the utility pole to the suspended ceiling grid. Hardwired connection to the building's power can be made in the junction box.

Power harness for use with utility pole is available to bring power down from the ceiling and into the panel to make a modular connection to a powerkit.
Tip: Power harnesses are ordered separately from the utility pole.

Ceiling heights up to 10' can be accommodated.

Shield on power harness permits a utility pole to accommodate power and communication cable routing at the same time. For applications where more cable routing is needed, you can use the utility pole without a power harness or use a lay-in utility package.
 ▶ Pages 362 and 428 for lay-in utility package.

Connections

Utility pole works with base and stacking junctions. It can only be used at an end-of-run, in-line, L- or T-configuration. It cannot be used in an X, V, or Y-configuration. Utility pole is always shipped with a junction, so don't double order.

End-of-run application uses an in-line junction. Utility pole extends 3" beyond the footprint of the panels. This works with thin, square, or oval trim.

In-line application uses T junction and adds 3" to panel run. This works with square or oval trim only.

"L" application uses T junction. Utility pole extends 3" beyond the footprint of the panels. This works with square or oval trim only.

"T" application uses X junction. Utility pole extends 3" beyond the footprint of the panels. This works with square or oval trim only.

Wiring & Cabling

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.
 ▶ Page 165

All Answer electrical components are listed by Underwriters Laboratory (UL) and certified by the Canadian Standards Association (CSA).

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Chicago and New York have special requirements.
 ▶ Pages 179 and 186

Base Power Infeed

Base power infeed connects power in the building floor to a powerkit in the base of a panel. Infeed occupies one receptacle opening.

► Specifying, page 502

Connector on end of base power infeed harness occupies one receptacle location in power block.

Flexible harness makes hardwired connection to building monument. The harness must be backfed through the base trim prior to connection into the building monument.

Cover is included with base power infeed to conceal the connection.

Wiring & Cabling

Connector on base power infeed must be placed behind panel base trim and harness must be backfed through base trim opening prior to an electrician making the connection to power in the building floor.

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

► Page 165

All Answer electrical components are listed by Underwriters Laboratory (UL) and certified by the Canadian Standards Association (CSA).

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Special requirements are needed for San Francisco.

► See page 502 for specification.

Special Requirements for New York City

New York City electrical code requires modular power components to be field installed by the electrician. Because Answer power components are always field installed, they are okay for use in New York.

Order New York City power infeed with the width that corresponds to the width of the panel it will be installed in.
Tip: Remember that the panel with the New York City power infeed installed cannot accommodate any receptacles in the base because a powerkit cannot be installed. Install a powerkit higher in the panel to accommodate receptacles or use adjacent panels to install receptacles.

Modular connector on end of harness attaches to powerkit in adjacent panel.

Junction box, included with infeed, allows electrician to make a hardwire connection to the building power supply. Box covers opening in base cover.

Conduits supplied by electrician.

Consolidation Point

Consolidation point can be accommodated inside an Answer panel to provide easy-to-access connection points for data/voice networks. The power and communication capabilities of the panel are unimpaired. Consolidation point is designed to hold data/voice cabling and network hardware, such as punch-down blocks and 19" patch panels. Consolidation point attaches inside 54"H, 66"H, and 78"H panels.

Tip: For accessibility remember to plan the location of your consolidation point so that it is not blocked by other furniture.

► Specifying, page 508

Consolidation point kit fits in panels that are 30"W, 36"W, or 42"W. Steel skin should be used with consolidation point kit.

Consolidation point kit attaches inside Answer panel. Kit includes back panel, consolidation point mounting brackets, and cable managers.

Skins on opposite side of panel can be of any type.

Back panel supports punch-down blocks or 19" patch panels which are supplied by the data/voice installer.

Punch-down blocks or patch panels, supplied by cable contractor, accept dozens of contact points for phone, computer, or other data/voice cables.

A steel skin can be used to cover a consolidation point. A tackable acoustical skin cannot be used.

Mounting brackets can be positioned by the installer as needed to support connection points and provide adequate space for cable routing.

Slotted channels in back panel accommodate adjustable mounting brackets at any height and spacing that suits the installer.

Top horizontal connecting bar is lowered 24"H to accommodate consolidation points.

Actual Dimensions

Panel depth	3"
Kit width	28½" and 34½"
Kit height	20 ¹⁷ / ₆₄ "

Product Details

Utility pole can route cables from the ceiling of the building to the consolidation point. Pole can also accommodate a power harness.

Mounting brackets accommodate standard-size, 19" patch panels or punch-down blocks which are supplied by the data/voice cabling installer.

Space inside panel is 3"D x 30"W or 36"W x 20"H.

Powerkits and cable trays cannot be used in the same location or height as a consolidation point kit.

Cable manager helps keep cables in order.

Connections

Hardware to attach consolidation point kit is included.

Wiring & Cabling

Consolidation point can typically accommodate up to 72 connections. Capacity depends on neatness of installation.

Distribution Products

Powerkits are a combination of modular power blocks, harnesses, and connectors that attach to a power tray for installation inside an Answer panel. Powerkits are available in widths that correspond to panel widths.

► Specifying, page 497

Powerkits may be specified in a non-PVC version. For those trying to gain the LEED Innovation in Design credit, non-PVC should be selected.

Pass-through powerkits are available for applications where you want to extend the power between panels but have no need for access in a specific panel.

► Specifying, page 498

Pass-through powerkits may be specified in a non-PVC version. For those trying to gain the LEED Innovation in Design credit, non-PVC should be selected.

Cable trays can be installed every 6" vertically and rearranged at various heights within a panel for communications access and cable routing.

► Specifying, page 496
Exception: Cable tray cannot be used in the base of the panel.

Cable tray can accept added cable carriers attached below tray to expand horizontal cable management options.

► See *Montage Specification Guide* for cable carrier (ZCC).

Product Details

Powerkits can be installed every 12" vertically. Typically they are positioned in the panel base, at worksurface height, or in both locations.

Pass-through powerkits extend power between panels.

Standard Base Trim Width of panel application determines how many receptacle and communication locations are available.

12"

 24"W with one power block. Communication opening is located below and to the right of the power block.

12"

 30"W with two power blocks. Communication opening is located below and to the right of the right-hand power block.

12"

 36"W to 48"W with two power blocks. Communication openings are located below and to the right of each of the power blocks.

12"

 60"W to 72"W with four power blocks. Communication openings are located below and to the right of each right-hand power block of each power block pair.

Tip: For non-base locations, same power block locations apply, but communication openings line up above the right-hand power block.

Hardwired Base Trim Width of panel application determines how many receptacle and communication locations are available.

12"

 24"W with one power block. Communication opening is located below and to the right of the power block.

10.3"

 30"W with two power blocks. Communication opening is located below and to the right of the right-hand power block.

12"

 36"W with two power blocks. Communication opening is located below and to the right of the right-hand power block.

12"

 42"W to 48"W with two power blocks. Communication openings are located below and to the right of each of the power blocks.

12"

 60"W to 72"W hardwire powerkit comes with two power blocks. The hardware base trim has two power knockout options on each end of the base trim. The power block can be installed at either knockout location. Communication openings are located below and to the right of each right-hand power block of each power block pair.

Tip: For non-base locations, same power block locations apply, but communication openings line up above the right-hand power block.

Tip: Communication openings are located 2 1/2" further right than standard base trims to accommodate wider hardwired junction boxes.

15-amp or 20-amp duplex receptacles snap into powerkits on one side or both sides of the panel.

USB receptacles available in three wiring schematics with multiple line options, snap into powerkits on one side or both sides of the panel. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

Install duplex or USB receptacles only where you want them. Add more receptacles in the future. *Exception: When using technology skins, receptacles are required in all power block locations. Tip: If receptacles are not specified for all power block locations, you must order filler through Service Parts (891500350MP, package of 20).*

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

▶ Page 165

Performance tackable acoustical skins and tackable acoustical skins can be cut in the field to allow access to duplex receptacles, USB receptacles, and communication outlets. Order cutting templates through Service Parts (T500940SR). Steel skins do not have cutouts and cannot accommodate receptacles. Install power receptacles and communication ports in the panel base cover below the steel skin or use a technology skin.

Knockouts and cutouts for receptacles in the panel base trim and skins are always 10 5/8" from the outside edges of the panel. Knockouts for communication in base accommodate modular furniture size only.

Filler to close unwanted openings in base trim is available from Service Parts.

Wire separators are not required. All electrical harnesses are shielded.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Chicago and New York have special requirements. ▶ Pages 179 and 186

Modular Harness

► Specifying, page 506

Modular harnesses are available to connect powerkits at different heights. Available in 43" and 80" lengths.

Extra length modular harness is required when connecting two power kits located at different heights inside the panel in a corner or in-line application.

In an in-line application extra length modular harness is not required when a powerkit is in the bottom (not base) location in a panel with open base.

In a corner application extra length modular harness is required when a powerkit is in the bottom (not base) location in a panel with open base trim. In this circumstance, the modular harness will need to be routed through the first large opening in the junction located above the powerkit. The modular harness cannot be routed through the foot area of the panel due to the open base trim.

Harnesses plug into connection points on the powerkit. Every powerkit has multiple connection points to allow branching of power.

Modular harness may be specified in a non-PVC version.

X-connection is formed by connecting two harnesses to two successive power blocks.

Modular harness may be specified in a non-PVC version. For those trying to gain the LEED Innovation in Design credit, non-PVC should be selected.

T-connection is formed by connecting two harnesses to a power block.

Multipurpose Power Infeed

► Specifying, page 505

Product Details

Multipurpose power infeed is shielded to allow power and communication routing side by side. Available in 6', 12', and 24' lengths.

Multipurpose power infeeds bring power into the panel and make a modular connection to a powerkit.

Multipurpose power infeeds can be used with ceiling- and floor-access lay-in utility packages and utility poles. Specify power harness separately.

Multipurpose power infeeds may be specified in a non-PVC version. For those trying to gain the LEED Innovation in Design credit, non-PVC should be selected.

Modular Junction Box Faceplate

Straight/
Flush

90°

► Specifying, page 501

Product Details

Modular junction box faceplate can be ordered separately and used with any modular harness length when 6', 12', and 24' lengths are not appropriate. Straight/flush and 90° faceplates are available. Non-PVC is standard. PVC version can be optioned.

Connections

Faceplate is attached to junction box with screws. Hardwire connection to power source with conventional $4^{11/16}$ " x $4^{11/16}$ " junction box is completed by electrician in the field. Modular extension harness can be connected or disconnected from faceplate as needed.

Special Requirements for Hardwired Solution

Chicago electrical code requires the power distribution network to be hardwired on site. These installations require hardwired powerkits.
 ▶ Specifying, page 504
Tip: Any hardwired installation can use the components of the hardwired powerkit.

Order panel without power and order a hardwired powerkit of the corresponding width.
 ▶ Page 504

Power tray is included in hardwired powerkit to secure junction boxes and to attach to panel frame.

When power is placed in a non-base application, skins must be field-cut. Technology skins cannot be used with hardwired solution.
Tip: Hardwire powerkit applications in the base location require a hardwire base trim for correct alignment of power and data receptacles.

Connections

Powerkit can be installed in panel base or at 12" vertical increments.

Junction boxes are typically mounted below the power tray; however, they can be mounted above when power is routed in a location other than the panel base. A bracket is included for mounting junction boxes above the powertray.

When using a hardwired solution with segmented skins, you may need to install junction boxes above the power tray to avoid interference with the steel frame of the skin. Approximately 3" of clearance is required when mounting junction boxes above the power tray. Keep in mind the upper horizontal connecting bar location to ensure enough space for mounting junction boxes above.
Tip: Don't forget to discuss junction box location and skin configuration prior to electrician installing the power.

Wiring & Cabling

Junction box can accommodate two receptacles back to back. Electrician can use Leviton 5325 or equivalent receptacles.

Order Chicago-version of shelf lights. These lights have a built-in circuit breaker.

Number of Junction Boxes is Determined by Panel Width

Panel width	Junction boxes
24"	1
30"	2
36"	2
42"	2
48"	2
60"	2
72"	2

Duplex Receptacles

► Specifying, page 499

Product Details

15-amp or 20-amp receptacles, ordered separately, snap into both faces of power block in the field.

Orange triangle indicates to users the receptacles that are connected to isolated grounds.

Surface Materials

Receptacle

Faceplate

► Specifying, page 501

Product Details

Faceplate, ordered separately, is used to surround receptacle when skin is field-cut. Templates for field cutting are available through Service Parts (T500940SR).

Faceplate is used to surround modular furniture size communication or DECORA outlets when installed in the face of a tackable acoustical panel skin. Templates for field cutting are available through Service Parts (T500940SR).

NEMA-size communication outlets (single gang) do not require a Steelcase faceplate. Cannot be used in base.

Accessories

Junction Tall Sleeve

► Specifying, page 507

Product Details

Junction tall sleeve can be added to vertical junctions to cover the exposed metal edges in the large cable routing openings of junctions manufactured on or after October 10, 2011.

Junction tall sleeves

are ordered separate from vertical junctions and are available in packages of 10.

Surface Materials

- Red plastic only

Lay-In Junction Cable Sleeve

► Specifying, page 507

Product Details

Lay-in junction cable sleeves can be added in the field to cover the exposed metal edges in lay-in cable space.

Surface Materials

- Lay-in junction cable sleeve
- Black plastic only

Feed-Through Horizontal Cable Sleeve

► Specifying, page 507

Product Details

Feed-through horizontal connecting bar cable sleeves can be added in the field to finish the exposed metal edges of vertical cable pass-through openings.

Surface Materials

- Feed-through horizontal cable sleeve
- Black plastic only

Grommet for Vertical Junctions (manufactured prior to October 2011) and Horizontal Bars

► Specifying, page 508

Product Details

Grommet for horizontal bar and junctions can be added in the field to finish the exposed metal edges of cable pass-through openings. For cable sleeves used with junctions manufactured after October 2011, use junction tall sleeve (TS7JTSLVE).

Grommets can also be used with power trays or cable trays.

Surface Materials

- Black plastic only

Grommet for Junction

► Specifying, page 508

Product Details

Grommet for junction can be added in the field to finish the exposed metal edges of horizontal cable pass-through openings.

Surface Materials

- Black plastic only

Series 9000 Duplex Cable Grommet

► Specifying, page 509

Product Details

Cable grommets can be inserted in receptacle openings to route cables from the panel base into the panel.

Surface Materials

- Black plastic only

Understanding Universal Systems Worksurfaces and Supports

Worksurface Positioning

Universal Worksurfaces

Universal Worksurfaces is a comprehensive solution of worksurfaces, supports, and privacy screens designed to deliver flexibility, mobility, and options to create inspiring spaces that support the different ways people work. A beautiful, light-scale aesthetic which gives designers new solutions across a broad spectrum of applications including the following: traditional panel-mounted systems, freestanding light-scale desking, panel wrapped desking, private office, conference, and teaming. Consists of Universal Systems Worksurfaces, U-Free Desks and Universal Tables.

Universal Systems Worksurfaces

Main worksurface solution for the four primary space division products: Answer, Montage, and Kick. Worksurfaces can be panel-mounted or freestanding.

- Extensive shape and size offering allows designers to meet a variety of planning applications.
- Worksurfaces feature a choice of curvilinear or straight-front shapes.
- User front edge available in choice of 3 mm edge or ergonomic P-edge.
- Available with 1/2" cord drop in the back of the worksurface providing the most efficient routing of cords and an uncluttered desktop.
- Also available full depth, providing an uninterrupted working surface that fits flush to the panel and allows L-configuration planning.
- Standard scallops allow large cord heads to easily pass below the desktop. Scallops can be eliminated for freestanding applications.
- Available with full offering of Steelcase High-Pressure Laminates or veneers; specifiable 3 mm edge or P-edge colors.
- Worksurfaces can be supported with cantilevers, center support panels, end panels, pedestals, legs, or desk supports.
- Straight worksurface available to specify parametrically from 18"D to 36"D and from 18"W to 120"W in 1/16" increments.

Answer Freestanding Desks

Main desk solution for use with the four primary space division products: Answer, Montage, and Kick. Desks are built up from Universal components ordered separately and assembled onsite.

- Flexible product offering allows a wide range of desk applications for private offices, reception areas, and open plan settings.
- Non-handed desk components are easy to assemble and easy to reconfigure.
- Compatible with a wide range of worksurface products, including Universal Systems Worksurfaces, and many others.
- Wide range of storage available, including universal pedestals, lateral files, and hutches.
- Full-height and half-height modesty panels available for desks and peninsulas.
- Visually compatible with Universal tables, towers, and other products.

Universal Tables

Versatile freestanding tables appropriate for teaming and conferencing environments or for individual work areas. Tables can be fixed or mobile for increased flexibility or ease of reconfiguration. They can also be tethered to Post and Beam in non-traditional applications.

- High-Pressure Laminate tables are available with a 3 mm edge or P-edge. Wood veneer tables are available with a square (3 mm) edge.
- User edge on all sides of the tables and rounded corners allow a user to work on any side.
- Wide range of sizes and shapes available, from small personal tables to large conference tables.
- Available with full offering of Steelcase High-Pressure Laminates or veneers; specifiable 3 mm edge or P-edge colors.
- T and X bases, post legs, C-leg, elliptical legs, adjustable-height legs, and cabby legs give designers many functional and aesthetic options.

Elective Elements Worksurfaces

(See Elective Elements Specification Guide.)

Main worksurface solution for three primary space division products: Answer and Montage. Worksurfaces can be panel-mounted or built up into casegood solutions appropriate for private office solutions when combined with storage, end panels, and modesty panels.

- Extensive shape and size offering allows designers to meet a variety of planning applications.
- Worksurfaces feature a choice of curvilinear or straight-front shapes.
- Desk, bridge, return, peninsula, and desk return worksurfaces are also available for freestanding casegood applications in addition to the typical systems worksurface shapes.
- User-front edge is available in a choice of 3 mm plastic edges, wood edge profiles on laminate worksurfaces (square 5 mm, bullnose), or wood edge profiles on wood worksurfaces (3 mm square, bullnose, waterfall, or knife).
- Worksurfaces are depths 24" or 30".
- Scallops are optional, as well as round or square grommets, depending on power and cable management needs. Grommets are available, depending on the worksurface shape, typically in left, center, and right locations.
- Grommets must be used for worksurface cable or cord management to route cords below the desk top.
- Scallops are used for task light cord management only.
- Available with full offering of Steelcase laminates or veneers. Also available with Customiz stain or open line laminates.
- Worksurfaces can be supported with Elective Elements supports (center support panels, end panels, under-worksurface storage, or freestanding legs) as well as Universal cantilevers and side support brackets.
- Height adjustability is achievable by using the height-adjustable storage and/or legs. Range of maintenance adjustability is 29"H-32"H in 1/2" increments.

Panel-Mounted Worksurface Supports Integration Matrix

This matrix shows recommended panel-mounted supports for specific panel and worksurface combinations.

Refer to the appropriate Solutions Specification Guide (Answer or Montage) for detailed information.

Tip: Alignment tabs will need to be knocked down when full-depth worksurfaces are used.

Worksurface Support Guidelines

Worksurface spans greater than 54" require a brace or additional support to the floor. Spans greater than 72" wide cannot be supported only by a reinforcing channel, and require additional supports to the floor. Calculate span distance by measuring from edge of one end of worksurface to edge of other end of worksurface.

Exception: When using pedestals or lateral files to support a worksurface, measure from the inside edge of the storage unit.

Worksurfaces can span up to 60" in heavy load applications and up to 72" in light load applications if a reinforcing channel is used. A light load application is less than 40 pounds placed on a worksurface. Reinforcing channel must be specified separately.

► Page 563

Exception: Knife edge worksurfaces require support on spans greater than 48"W.

Reinforcing channel is not required on worksurfaces with spans less than 54"W.

Lightly loaded applications typically include a workstation with monitors, lighting, limited organizational tools, and personal items.

Reinforcing channel or additional support is required for worksurfaces with spans greater than 54"W and less than 72"W in light use applications and on worksurfaces with spans greater than 54"W and less than 60"W in heavy load applications.

Worksurface span cannot be supported solely by a reinforcing channel. Additional to the floor supports are required.

Tip: Reinforcing channels add 1"D below the worksurface.

Tip: For maximum effectiveness, place the reinforcing channel in the middle of the worksurface span.

Calculate span distance by measuring from edge of one end of worksurface to edge of other end of worksurface. To determine size of reinforcing channel needed, deduct the amount listed in the matrix below from the measured span. Deduction in inches is based on combination of the left-hand and right-hand supports.

Example: 72"W measured span, with application of cantilever for left-hand support and end panel for right-hand support, has a span deduction of 6" for a reinforcing channel size of 66" (72"-6" = 66"). For this application, use reinforcing channel TS7WKSPT66.

Worksurface Span Deductions for Determining Reinforcing Channel Size		Right-Hand Support						
		End Panel	FrameOne Leg	FrameOne Leg-Table Application	Intermediate Support	DBL Post Leg	Cantilever	All other Legs/Supports
Left-Hand Support	End Panel	-6"	-6"	-9"	-9"	-6"	-6"	-6"
	FrameOne Leg	-6"	-6"	-9"	-9"	-6"	-6"	-6"
	FrameOne Leg-Table Application	-9"	-9"	-12"	-12"	-9"	-9"	-9"
	Intermediate Support	-9"	-9"	-12"	-12"	-9"	-9"	-9"
	DBL Post Leg	-6"	-6"	-9"	-9"	-6"	-6"	-6"
	Cantilever	-6"	-6"	-9"	-9"	-6"	-6"	-6"
	All other Legs/Supports	-6"	-6"	-9"	-9"	-6"	-6"	-6"

Reinforcing Channel Sizes		
Style Number	Nominal	Actual
TS7WKSPT39	39"W	39.231"W
TS7WKSPT48	48"W	47.547"W
TS7WKSPT51	51"W	50.547"W
TS7WKSPT54	54"W	53.547"W
TS7WKSPT	57"W	56.547"W
TS7WKSPT60	60"W	59.547"W
TS7WKSPT63	63"W	62.547"W
TS7WKSPT66	66"W	65.547"W
TS7WKSPT72	72"W	71.547"W

Note: If the deducted span distance falls between two reinforcing channel sizes, select the smaller of the two sizes.

Reinforcing Channel Size for Straight 120° Worksurfaces

To calculate the reinforcing channel size for a straight 120° worksurface, use the user edge length, subtract 6", and order the next shortest channel. See chart below.

Back Edge Width	Worksurface Depth	User Edge Depth	Reinforcing Channel Size
48"	23½"	61⅙"	54"W
48"	29½"	65⅙"	57"W
60"	23½"	73⅙"	66"W
60"	29½"	77⅙"	66"W
72"	23 ½"	85⅙"	72"W
72"	29½"	89⅙"	72"W

Support Requirements for Peninsula Worksurfaces

Peninsula worksurfaces smaller than 60"W do not require a reinforcing channel. Location of leg or column support, determined by pilot holes, meets the requirements for worksurface support every 54". Sizes 60"W or greater require a reinforcing channel. Determining brace size for peninsula worksurfaces: If worksurface is supported by a single column or legs, subtract 21" from span of worksurface to determine reinforcing channel size. Example: 72"W measured span has a span deduction of 21" for a reinforcing channel size of 51" ($72" - 21" = 51"$). For this application, use reinforcing channel TS7WKSPT51.

Universal Worksurface Thought Starters

Universal Worksurface Products provide a variety of traditional and non-traditional methods of applying worksurfaces and supports. Worksurfaces can be supported in on-module and off-module panel-supported applications, freestanding configurations, tethered to Post and Beam, and many combinations of these applications. The thought starters included on the following pages can help leverage the benefits of the worksurfaces in new and unique ways.

Universal Worksurface Products provide significant planning flexibility:

- Systems Worksurfaces and Tables can be used together, and a wide range of worksurface shapes and sizes allow various footprints to be achieved.
- Systems Worksurfaces can be used with Answer and Kick panels, Montage frames, and V.I.A. walls. They can be panel-supported or freestanding. *Tip: Corner 120° Systems Worksurfaces may not be panel-supported with Montage panels due to the unique design of the Montage 120° junction.*
- Freestanding, mobile worksurfaces and tables allow user control of the workspace to provide either privacy or team collaboration.
- 26"H and 28½"H legs may be installed 3", 6", or 9" from the edge of most Tables to accommodate nesting and slip-fit capability.
- Adjustable-height legs are available on Systems Worksurfaces and Tables. Legs adjust 25½"H to 31½"H in ¾" increments.
- Tether brackets are available to secure Tables to Post and Beam fence.

Freestanding tables with legs installed 6" or 9" from the edge allow the worksurface to slip-fit over the panel-mounted Systems Worksurface. This configuration also allows the user to face the aisle while working at the computer.

Full depth systems worksurfaces allow L-configurations without uneven gaps. This configuration uses an angled peninsula worksurface to provide an aisle-facing place for active work and meetings. A 96" long straight worksurface creates a large, unbroken area to spread out work in progress. All the worksurfaces in this configuration are symmetrical, making it easy to plan mirror image applications.

U-Configuration with Large Footprint

Recommended Worksurfaces

One 24"D x 72"W left-hand bubble jetty table	BFJ2472LP
One 23½"D x 60"W straight worksurface (P-edge)	US2460P
One 23½"D x 23½"D x 41½"W x 41½"W corner, curved-front worksurface (P-edge)	UCC224242P
One 23½"D x 30"W visitor, curved-front worksurface (P-edge)	UVC2430RP

L-Configuration with Large Footprint

Recommended Worksurfaces

One 24"D x 24"D x 60"L angled peninsula worksurface	WPA2460
One 24"D x 24"W straight worksurface	WS2424
One 24"D x 96"W straight worksurface	WS2496

Universal Systems Worksurfaces

Universal Worksurface Thought Starters, continued

Systems worksurfaces with 1/2" cord drop allow easy cord management with uniform gaps whenever corner worksurfaces are used. This U-configuration uses 18³/₈"D worksurfaces to create a spacious workstation in a 6x7 footprint.

U-Configuration with Medium Footprint

Recommended Worksurfaces

Two 18 ³ / ₈ "D x 30"W straight worksurfaces	US1830
Two 18 ³ / ₈ "D x 18 ³ / ₈ "D x 41 ¹ / ₂ "W x 41 ¹ / ₂ "W corner, curved-front worksurfaces	UCC114242

Tapered worksurface shapes can maximize space for the user by providing extra depth for the computer only where it's needed. This configuration uses a taper-flat worksurface and an 18⁷/₈"D return to give the user more space in a 6x6 footprint. The user can also face toward the aisle while working at the computer.

L-Configuration with Small Footprint A

Recommended Worksurfaces

One 30"D x 24"D x 72"W taper-flat worksurface	WTTF3272
One 18 ⁷ / ₈ "D x 48"W straight worksurface	WS1848

Freestanding tables with nesting-height legs

allow tables to nest under panel-mounted Systems Worksurfaces. This configuration uses an 18"D Systems Worksurface and allows a small workstation to expand and decrease, giving users control over their space.

L-Configuration with Small Footprint B

Recommended Worksurfaces

One 24"D x 48"W capsule table (P-edge)	BFK2448P
One 18 ³ / ₈ "D x 60"W straight worksurface (P-edge)	US1860P

Spacious U-configurations with a minimum number of panels and work-surfaces

can be created with 60"W x 60"W corner, curved-front and linking peninsula Systems Worksurfaces.

Penta Cube

Recommended Worksurfaces

Six 24"D x 60"W x 60"W x 24"D corner, curved-front worksurfaces (3 mm edge)	UCC226060
Five linking peninsula worksurfaces (3 mm edge)	UPAC2748
One straight worksurface (3 mm edge)	US2460

Tip: Size of linking peninsula worksurface to be used is determined by the panel system which it will be used with. Answer panels are shown at left.

Universal Systems Worksurfaces

Systems worksurfaces— with 1/2" Cord Drop feature built-in cable management flexibility, allowing cords to drop below the worksurface at any point along the back edge.
▶ Specifying page 512

Systems worksurfaces— Full Depth feature a tighter fit to panels for a cleaner aesthetic.

Systems straight work-surfaces with 1/2" cord drop and full depth are available in a variety of widths and depths in modular and parametric dimensions.

Product Details

High-Pressure Laminate Worksurfaces

Front (user's) edge profile is available in three shapes.

PVC-free, 3 mm edge profiles are proprietary polyolefin blend for all solid colors and seven woodgrain finishes. Matching 1 mm side and back edges are also PVC-free.

▶ See surface material listing in this book for specific PVC-free availability.

P-edge profile rises slightly above the laminate surface and curves into a 3/8" radius which optimizes ergonomic benefit for the user. Back and side edges are flat.

Knife edge with 3 mm user edge is available on straight and tapered systems worksurfaces and on round tables.

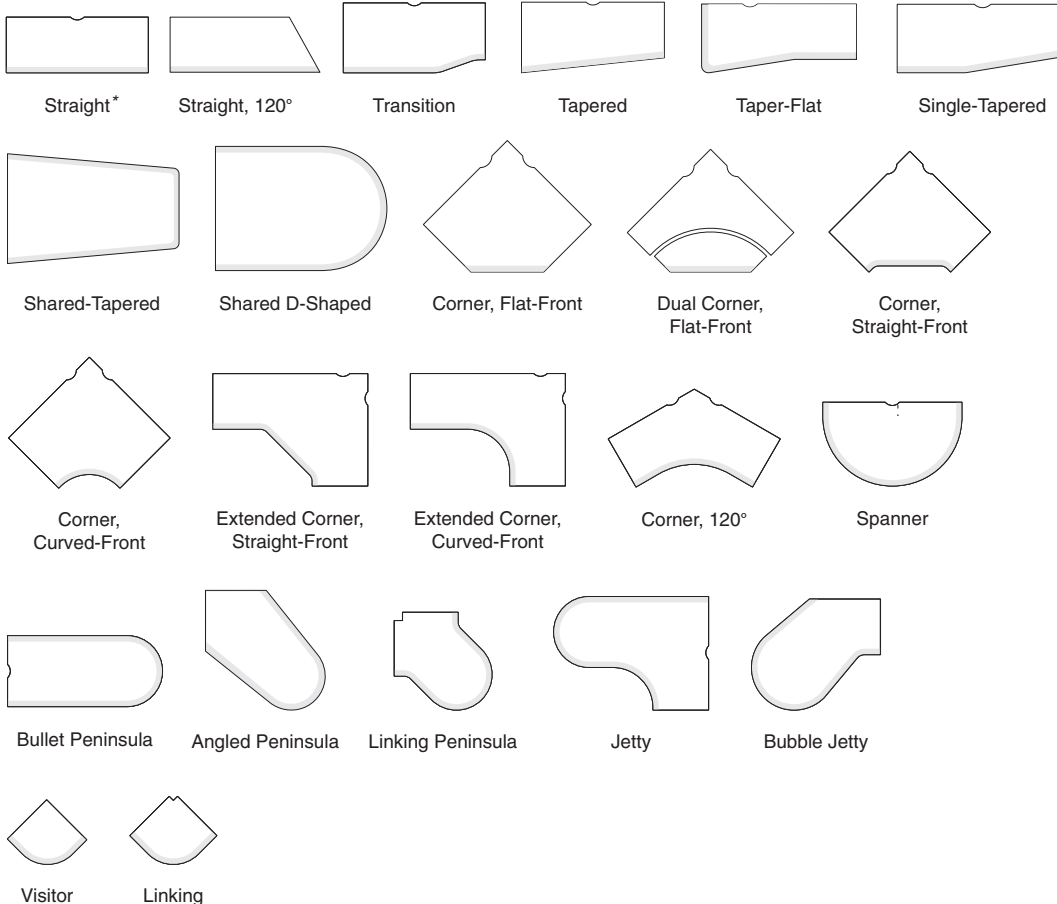

Edge profile finishes are specified separately from laminate color.

Wood Veneer Worksurfaces

Front (user's) edge profile is wood veneer with a square (3 mm) radius. Back edge and edge that joins to adjacent worksurfaces are flat. Wood edge color matches finish specified for worksurface.

Edge Profiles

Edge profile is applied to front (user's) edge only.

*Tip: Straight worksurface width is available parametric from 18"W–120"W in 1/16" increments. Straight worksurface depth can be specified parametric from 18"D–36"D in 1/16" increments.

P-edge profile work-surface depths are 3/8" deeper than 3 mm edge profile worksurfaces. Both edge profiles provide a flush interface with universal pedestals.

Straight worksurfaces are available to specify parametrically. The parametric dimensions available are from 18" to 36" deep and from 18" to 120" wide in 1/16" increments both depth and width.

Parametric straight worksurfaces are available in laminate with a 3 mm plastic edge, P-edge, knife edge, or soft edge options and wood veneer with square edge or soft edge options.

Parametric straight worksurfaces have the option to specify a scallop, grommet cutouts, power and data access door and tray cutout, or power access door.

Dual-worksurfaces are two pieces - a large monitor surface with a smaller keyboard surface attached. A dual-arm spring mechanism provides superior stability when compared to the single-arm spring mechanism used in worksurfaces with an adjustable keyboard shelf.

Keyboard surface on dual worksurface can be adjusted to positions up to 6" higher or 5" lower than the monitor worksurface.

Keyboard surface tilts with a range of 25°.

A 1" gap separates the sides of the keyboard surface and adjacent worksurfaces. There is also a 1 1/2" space between the keyboard and monitor surfaces.

30"D straight, tapered, and transition cantilevered worksurfaces require additional floor support along the front edge, such as a pedestal, end panel, post leg, side support bracket, or an adjacent return worksurface.

Taper-flat worksurfaces can be supported at the larger end with a side support bracket and a post leg. If the larger end is 30"D, a 24"D end panel can also be used.

Spanner worksurfaces with 3" notch accommodate Answer panels. Legs and cantilevers or column and cantilevers must be used for support.

Notch is not included on spanner worksurfaces for freestanding applications without panels.

Shared worksurfaces, both tapered and D-shaped, attach to a 30" wide Answer panel only and can be supported three ways:

- With an Answer panel support bracket and two cabby legs
- With an Answer panel support bracket and column support
- With an Answer panel support bracket and standing-height column support

3 mm edge bullet peninsula, jetty, and bubble jetty worksurfaces can be supported two ways:

- With a cantilever, a center support panel and a column
- With a cantilever, a side support bracket, and two post legs

In certain applications, a center support panel should not be used because the unfinished top edge of the support panel would be exposed. Use a cantilever, a side support bracket, and two post legs instead. These applications include:

- Bullet peninsula with P-edge
- Jetty with P-edge
- Bubble jetty with P-edge
- Angled peninsula with 3 mm edge and 1/2" cord drop

Linking peninsula worksurfaces and linking worksurfaces with 3" notch accommodates Answer panels. Legs and cantilevers or column and cantilevers must be used to support linking peninsula worksurfaces. One leg and two cantilevers must be used to support linking worksurfaces.

Universal Systems Worksurfaces, continued

3 mm edge visitor worksurfaces must be supported by either a cantilever and a center support panel, or by a cantilever, a side support bracket, a side support bracket, and a leg.

In P-edge profile work-surface applications, a side support bracket, a cantilever, and a leg must be used for support. A center support panel should not be used because the unfinished top edge of the support panel would be exposed.

Connections

Worksurfaces can be used freestanding or in panel-supported installations.

Supports are ordered separately and installed in the field.

For panel-supported applications you can use:

- Closed loop
- Open loop
- Half loop
- Intermediate support
- Off-module work-surface-to-panel connector
- Side support brackets
- Cantilever with tie plate
- End panel
- Standing-height end panel
- Support plate
- Center support panel with tie plate
- Standing-height center support panel with tie plate
- Columns or legs

▶ See page 228 for *Panel-Mounted Universal Systems Worksurface Supports*.

- Universal pedestal with filler
- Universal lateral file with underworksurface lateral file filler.

▶ See *Storage Specification Guide*.

Tip: Selected worksurfaces with P-edge profile include alignment slots to accept cabby legs for column support:

- Use two legs for panel-mounted spanner, bullet peninsula, linking peninsula, jetty, and bubble jetty worksurfaces.
- Use one leg for visitor and linking worksurfaces.

For Answer Freestanding desk applications you can use:

- End supports
- Peninsula supports
- Corner support
- Columns and legs
- Closed loop or open loop
- Modesty panels
- Pedestals
- Lateral files and storage cabinets

▶ See *Answer Freestanding Specification Guide*.

Tip: Peninsula support is not compatible with P-edge bullet peninsula, jetty, or bubble jetty worksurfaces. Legs or other alternate supports are recommended.

For leg-based applications you can use:

- Closed loop
- Open loop
- Intermediate support
- Post legs
- Double post leg
- Double post C-leg
- Support plate

▶ See page 236 for *Legs and Columns for Universal Systems Worksurfaces*.

Tip: Pedestal can also be used in leg-based freestanding installations.

Intermediate supports replace the need for other types of worksurface support when used with 1-High or 1.5-High Universal storage.

Worksurface spans greater than 54" require additional support of a cantilever, pedestal, intermediate support, or leg. Exception: Worksurfaces can span up to 60" in heavy load applications and up to 72" in light load applications if a TS7WKSPT reinforcing channel is used. Reinforcing channel must be specified separately.

▶ Page 563

Knife edge worksurfaces require reinforcement channels for spans greater than 48". Use TS7WKSPT39 for 54"W worksurfaces, TS7WKSPT for 60"W and 66"W worksurfaces, and TS7WKSPT72 for 72" worksurfaces.

Heavy load worksurfaces spanning greater than 60", or all worksurface spans wider than 72" require additional support of a cantilever, pedestal, intermediate support, or leg.

Wiring & Cabling

Worksurface depth is 1/2" less than nominal and allows cords and cables to pass over at any point. Cable scallops provide space for plugs to pass over the back edge of the worksurface.

Cable scallop allows cord plugs to easily pass below the worksurface. Worksurface wire managers are available to convert cable scallops into grommets in freestanding applications. Wire managers are included with wood veneer worksurfaces. Wire managers for use with laminate worksurface must be ordered separately.

Corner worksurfaces have scallops located 12 1/2" from the rear corner of the worksurface to the center of the scallop. Taper-flat worksurfaces have a single scallop located 18 1/2" from the larger end. Scallops are centered on the rear edge of all other worksurfaces that include them.

Cable scallop can be omitted for freestanding applications or panel-supported applications where plugs do not need to pass over the back edge of the worksurface.

Cable management devices are available to help manage conventional and fiber-optic cables beneath the worksurface. ▶ See *Worksurface Power and Communication*, page 581.

Parametric straight worksurfaces have two grommet cutout options. The 2" round grommet cutout option fits the AWAG2 grommet which is specified separately.
 ▶ See page 585

The 3" round grommet cutout option fits the TSAEGROM grommet which is specified separately.
 ▶ See page 586

The grommet cutout option is not available on a worksurface when the power access door option is selected.

Grommet cutouts in parametric straight work-surfaces can be specified in the center, the left, or the right sides of the worksurface. Grommet cutouts are available in the below configurations.

Grommet Location on Worksurface	Minimum Worksurface Widths
Center, Right, or Left	All widths
Right and Left	At least 25"W
Right and Center	At least 34"W
Left and Center	At least 34"W
Center, Right, and Left	At least 34"W

Surface Materials

High-Pressure Laminate Worksurfaces

- Laminate
- ▶ See *Surface Materials Reference Manual*.
- Open Line laminate (option) A program including non-Steelcase laminates which are suitable for use on Steelcase products.
- ▶ See *Surface Materials Reference Manual*.

Front (user's) edge(s)

- Plastic

Back and side edges

- Plastic color default to match user's edge

Wood Veneer Worksurfaces

- Wood veneer (standard)
- Customiz stain (option)
- Full-fill finish (option)

Square (3 mm) edge profile

- Wood veneer to match worksurface

Front (user's) edge(s)

- Wood edge band

Application Topics

P-Edge Profile Application Rules

P-edge profiles will produce a valley when installed perpendicular to adjacent worksurfaces. The additional 3/8" depth of P-edge profiles causes an interference fit in on-module panel-mounted applications. For L-configurations using two worksurfaces, the 3 mm edge profile is recommended.

P-edge profile work-surface depth prevents modesty panels from fitting properly in return or bridge Answer Freestanding desk applications. Modesty panels cannot be used when a return or bridge worksurface is attached to the front edge of a P-edge worksurface. The 3 mm edge profile is recommended for return or bridge applications.

Answer Freestanding peninsula support is not compatible with P-edge bullet peninsula, jetty or bubble jetty worksurfaces. Legs or other alternate supports are recommended.

Full-depth worksurfaces provide an uninterrupted working surface and are designed to allow traditional corner or L-configuration planning without creating uneven gaps.

Plan using worksurfaces actual dimensions when panel-wrapping worksurfaces

because worksurface depths and widths vary by type. Straight and transition worksurfaces are full-width to correspond directly with panel width. Corner, extended corner, 120° corner, bullet peninsula, jetty, visitor, and linking worksurfaces are 1/2" less than panel width to allow for a consistent 1/2" cable-management gap when used in combination with straight worksurfaces.

Tip: To avoid uneven gaps in panel-supported applications, use full-depth worksurfaces to create L-configurations.

Screens mount to work-surfaces in privacy position or below the worksurface for modesty.
 ▶ See *Screens*, page 242.

Worksurfaces used in panel-supported installations must follow applicable panel stability guidelines.
 ▶ Page 142

Do not use a Universal Systems Worksurface

as a top for storage that matches the worksurface width. Universal Systems Worksurfaces are slightly undersized for panel-wrapped applications and will not fit over full-width storage. Use field-installed storage tops for this type of application.
 ▶ See *Storage Specification Guide*.

Knife edge worksurfaces

have limitations for support options and application restrictions.
 ▶ See page 238 for *Knife Edge Worksurface Application Guidelines*

Shipping

Palletizing streamlines unloading and staging of worksurfaces. Identical worksurfaces ordered on the same line item are packed on pallets containing 5–50 worksurfaces depending on worksurface size. Remaining worksurfaces are packed individually in cartons. If palletizing is not desired, order in quantities of four or less per line item. For maximum unload efficiency, utilize pallet handling equipment at job site whenever possible. Wood veneer worksurfaces cannot be palletized.

Universal Systems Worksurfaces with Soft Edge, Power and Data Access Door and Tray

Soft edge provides a comfortable user experience reducing strain on wrists and forearms.

► Specifying page 520

Power and data access door and tray provides desk top access and management of cords.

► Specifying page 558

Soft edge and power and data access door and tray cutout are available in modular and parametric straight worksurfaces, both 1/2" cord drop and full depth.

Cutout is optional; power and data access door and tray is ordered separately. 24"W cutout is centered near the back of the worksurface.

Edge is soft to the touch and flexes to conform to the arm.

Power and data access door and tray is available with cord or with modular or hardwire connection.

Soft edge is 36" wide centered on the worksurface; balance of front edge is 3 mm radius. Back and side edges are flat.

Soft edge and power and data access door and tray are available on straight and taper Universal Systems Worksurfaces with 1/2" cord drop and full depth.

Tray includes six simplex receptacles and cutout for data access.

Height	N.A.	N.A.	4 3/4"

Product Details

Soft edge profile is polyurethane and is available with Bactiblock™ antimicrobial protection.

High-Pressure Laminate Worksurfaces

PVC-free, 3 mm edge profiles are proprietary polyolefin blend for all solid colors and seven woodgrain finishes. Matching 1 mm side and back edges are also PVC-free. See surface material listing in this book for specific PVC-free availability.

3 mm front edge is specifiable. Back and side edges match 3 mm front edge.

Edge profile finish for 3 mm front edge is specified separately from laminate color.

Wood Veneer Worksurfaces

Front (user's) edge profile is wood veneer with a square (3 mm) radius. Back edge and edge that joins to adjacent worksurfaces are flat. Wood edge color matches finish specified for worksurface.

Scallops are omitted on worksurface when cutout for power and data access door and tray option is selected.

Power and data access door and tray cutouts are 3⁵/₁₆" from the back edge of the worksurface and always centered on the width of the worksurface.

Power and data access door and tray cutouts are available on worksurfaces 24"D through 36"D.

Inner tray provides under the surface power and data connections and access and cord management.

Outer tray provides cover and management for harness, cord, and/or data cables to and from the panel.

Power and data access door and tray flips toward the user.

Modular, cord and plug, or hardware options are available.

Corded version includes 10' cord with plug. Modular and hardware versions each include 8' of harness.

Three wiring schematics are available in the modular version – 3+1, 2+2, and 3 separate neutrals (3SN). Each has a single circuit. 3+1 and 2+2 have the option for line 1, 2, 3, or 4 with either a system or isolated ground. 3SN has the option for line 1, 2, or 3 with either a system or isolated ground.

Data cutout in tray can accommodate either a single gang or a modular furniture communication faceplate. Tray includes adapter to accommodate modular faceplate.

Filler packages are available to fill unused data cutouts. Order separately in packages of 20.

With the modular and hardware version, the harness enters the panel through a field cut opening in a fabric skin. A grommet is included to provide a finished edge to the field cut opening in the skin where the harness enters the panel. Inside the panel the harness can connect to a powerkit or it can use either a harness to harness connector or a branching harness to harness connector to connect to other modular harness trays or modular harnesses.

Cord and plug version has an integrated overload circuit breaker.

Non-PVC versions are available for each power solution.

Connections

Fixed storage can be used with worksurfaces with soft edge but must not encroach the 36" width of the edge.

Worksurfaces connected perpendicular should not encroach the 36" width of the soft edge.

Soft edge worksurfaces are available with the same support options and follow the same application rules as other Universal Systems worksurfaces.

▶ See page 216 for Universal Systems Worksurfaces Understanding. *Exception: 48"W worksurface with soft edge used with the FrameOne post leg has some limitations.*

In an end-of-run condition, the FrameOne post leg will not fit when used with 48"W soft edge worksurfaces, use half, open, or closed loop legs.

In shared applications, the FrameOne post leg can be angled and positioned at the front edge or for a square orientation it must be inset 1" from the front edge when used with 48"W soft edge worksurfaces.

Access holes in tray allow power and data to be routed straight back when worksurface is against the panel or routed to the sides when the worksurface is perpendicular to the panel.

Worksurfaces with power and data access door and tray are available with the same support options and follow the same application rules as other Universal Systems worksurfaces.

▶ See page 216 for Universal Systems Worksurfaces Understanding.

Universal Systems Worksurfaces with Soft Edge, Power and Data Access Door and Tray, continued

Tray with cord and plug can be used in a freestanding table application.

Worksurfaces with power and data access door and tray with modular or hardwire power cannot be used in a freestanding application. The worksurface must either be attached to a panel on one end or if the worksurface is attached to low storage with an intermediate support on one end, the cabinet must be attached to the panel or ganged to another storage cabinet. This applies to both parallel or perpendicular to the panel applications.

Height of tray is 4³/₄" so lower storage height must be accounted for when used adjacent to tray.

Width of outer tray below the worksurface is 27¹/₈" so adjacent lower storage dimensions must be accounted for on each worksurface width.

Tray with cord and plug includes two cord clips to help manage the cord below the worksurface.

Tray with modular harness or hardwire harness includes two harness clips to help manage the harness below the worksurface.

Soft edge worksurfaces and power and data access door and tray worksurfaces require reinforcement channel or other support on worksurfaces 60"W or larger.

Worksurfaces greater than 72"W require additional support such as cantilevers, pedestals, or legs beyond the brace.

Wiring & Cabling

Chicago, New York, and Los Angeles have special requirements.

Underwriter Laboratory (UL) listed. The power and data tray has been designed to meet U.S. and Canadian national electrical and energy codes and most local building codes. Local electrical codes vary, so consult with your local authority having jurisdiction as they have final say if the products as installed are compliant with local code. Consult a qualified electrician or electrical engineer for proper installation of all electrical equipment.

Dimensions

Cutout for Door

Width	16 ¹ / ₈ "
Depth	4 ¹ / ₄ "

*Tip: Modular 29¹/₂"D worksurface is only available up to 72"W. Worksurface width is available parametric from 18"W–120"W in 1/16" increments. Worksurface depth can be specified parametric from 18 3/8"D–36"D in 1/16" increments.

Product Details

High-Pressure Laminate Worksurfaces

PVC-free, 3 mm edge profiles are proprietary polyolefin blend for all solid colors and seven woodgrain finishes. Matching 1 mm side and back edges are also PVC-free.

▶ See *Surface Materials Reference Manual* for specific PVC-free availability.

3 mm front edge is specifiable. Back and side-edges match 3 mm front edge.

Edge profile finish for 3 mm front edge is specified separately from laminate color.

Wood Veneer Worksurfaces

Front (user's) edge profile is wood veneer with a square (3 mm) radius. Back edge and edge that joins to adjacent worksurfaces are flat. Wood edge color matches finish specified for worksurface.

Scallops are omitted on all worksurfaces with a power access door.

Power access door provides access to power outlets in the panel.

Universal Laminate Enhanced storage with recessed back should be used when storage will be placed in front of a power outlet.

Recessed back storage features a 3³/₄" cavity to allow access to outlets below the worksurface.

Surface Materials

High-Pressure Laminate Worksurfaces

- Laminate

- 6527 Merle

Transaction Worksurfaces

Transaction worksurface

provides a surface that can be used by standing visitors or serve as a shelf.

► Specifying, page 554

Worksurface has a wood core with a High-Pressure Laminate or wood veneer surface and is 1 3/16" thick.

Attachment brackets are included.

Shortened top caps are included with the transaction worksurface. Top caps are available in thin, square, or oval styles and are compatible with same-height or change-of-height applications.

Product Details

High-Pressure Laminate Worksurfaces

Edge profile is available in two shapes.

3 mm edge profile P-edge edge profile

Both edge profiles are plastic, and are specified separately from laminate color.

P-edge profile rises slightly above the laminate surface and curves into a 3/8" radius which optimizes ergonomic benefit for the user.

Wood Veneer Worksurfaces

Edge profile is wood veneer with a square (3 mm) radius. Wood edge color matches finish specified for worksurface.

Edge profile is applied to all edges.

Actual Dimensions

Square and Oval		Thin	
A	B	A	B
15"	23" for use on 30"W panel	15"	28" for use on 30"W panel
15"	29" for use on 36"W panel	15"	34" for use on 36"W panel
15"	35" for use on 42"W panel	15"	40" for use on 42"W panel
15"	41" for use on 48"W panel	15"	46" for use on 48"W panel
15"	53" for use on 60"W panel	15"	58" for use on 60"W panel

Tip: Wood veneer transaction worksurfaces are not available in 23"W.

Connections

Transaction work surface support brackets connect to the top of a horizontal connecting bar. Horizontal bar must be connected to junctions in top position.

Transaction work surfaces cannot be used when a transparent window, pass-thru window, or consolidation point cabinet are assembled at the top of a panel.

In square and oval trim applications, a transaction top cannot be used on a 48"H panel when the panel is connected to a taller panel in a change-of-height condition.

A transaction top may be used on a 48"H panel connected to a taller panel in a change-of-height condition, but the taller panel must comprise of a 48"H base junction with a stacking junction to achieve the taller height.

Spanning two panels with thin trim is possible.

Exception: 58"W transaction work surface cannot span multi-panels because it has an additional support bracket that conflicts with the junction between two 30"W panels.

Spanning two panels with square or oval trim is possible.

Exception: 53"W transaction work surface cannot span multi-panels because it has an additional support bracket that conflicts with the junction between two 30"W panels.

Width of transaction work surface with thin trim is 2" shorter than the width of corresponding panel to accommodate change-of-height applications.

Width of transaction work surface with square and oval trim is 7" shorter than the width of corresponding panel to accommodate change-of-height applications.

Panels on one or on both sides of the transaction work surface can be higher or lower than the panel that supports the transaction work surface.

Transaction work surfaces with thin or oval trim include top trim that accommodates all standard and change-of-height applications (one end or both ends).

Transaction work surfaces with square trim include top trim that accommodates both standard and slim change-of-height applications (one end or both ends). Change-of-height option must be specified when used adjacent to cable management change-of-height (one end or both ends).

Recommended standing height for transaction work surface is achieved by attaching it to 42"H panels.

Utility2 shelf lights can be installed beneath transaction work surfaces using screws and keyhole slots in light fixture.

Transaction work surface must be centered on the panel.

Wiring & Cabling

Transaction work surface blocks cable routing in the top cable tray but cable routing is still available lower in the panel.

Universal Panel-Mounted Worksurface Supports

For Answer Panel Applications

On-module supports can be used to panel support worksurfaces in various configurations.

► Specifying, page 562

Worksurface supports feature alignment tab used to set a depth for Universal Systems Worksurfaces—with 1/2" cord drop. This tab is bent down when installing full-depth worksurfaces.

Cantilever can be used to panel-support a worksurface at any height.

End panel can be used to support the end of a worksurface.

Center support panel can be shared by two worksurfaces and may be required for longer runs of worksurfaces.

Side support brackets can be used to support the ends of straight and corner worksurfaces and to support the back corner of any corner worksurface.

Product Details

On-module work surface supports engage the slots in the vertical uprights of Answer panels.

Side support brackets support worksurfaces at any height in 1" increments. Brackets ship as a left- and right-hand pair and are ordered separately.

Side support brackets can be used to support the end of a worksurface that is wrapped by a panel with the same width dimension that matches the worksurface depth.

Actual Dimensions

	Cantilever	Center support panel	End panel
Height	12 1/4"	28 1/2" or 40 7/8"*	28 1/2" or 40 7/8"*
Depth	15 1/2"	11"	23 3/4" or 29 3/4"
Glide Range	N.A.	1 1/4"	1 1/4"

*Height dimensions include the thickness of a worksurface.

Single side support bracket can be used to support the rear corner of corner, extended corner, and 120° corner worksurfaces.
Tip: For off-module fin wall applications, the single side support bracket must be handed appropriately for connection to the fin wall.

Single side support bracket can be used to support the user's side rear corner of bullet peninsula, angled peninsula, visitor, jetty, and bubble jetty worksurfaces.

Cantilevers support worksurfaces at any height in 1" increments. Cantilever is non-handed and can be used to support either end of a work surface, or shared to support two worksurfaces at the same height simultaneously. One tie plate ships with each cantilever.

30"D straight, tapered, and transition cantilevered worksurfaces require additional floor support along the front edge, such as a pedestal, end panel, post leg, side support bracket, or an adjacent return work surface.

24 1/16"D - 36"D parametric straight cantilevered worksurfaces require additional floor support along the front edge, such as a pedestal, end panel, post leg, side support bracket, or an adjacent return work surface.

Adjacent cantilevered work surfaces must be the same height in order to connect with a tie plate and provide panel stability.

Tip: Answer panel junctions can accommodate only one support at each work surface seam.

Center support panel is an alternative to a cantilever in supporting longer runs of worksurfaces for additional panel stability. Refer to the applicable panel stability guidelines for specific requirements.

Center support panels are available in seated and standing heights, and cannot be used in freestanding applications or as a substitute for an end panel. One tie plate ships with each center support panel.

Center support panels should not be installed along the user's edge on P-edge profile jetty and visitor worksurfaces. The unfinished top edge of the center support panel would be exposed. Use single side support bracket and a post or cabby leg.

End panels can be used to support the end of a work surface for additional panel stability. Refer to the applicable panel stability guidelines for specific requirements.

End panels are available in seated and standing heights, and cannot be used in freestanding applications.

All panel mounted supports can be removed and repositioned later without any permanent damage to panels or skins.

Pedestals and lateral files with a filler can be used to support the end of a work surface in place of an end panel.

▶ See *Storage Specification Guide*.

Work surface spans greater than 54" require additional support of a cantilever, pedestal, intermediate support, or leg. Exception: Worksurfaces can span up to 60" in heavy load applications and up to 72" in light load applications if a TS7WKSPT reinforcing channel is used. Reinforcing channel must be specified separately.
▶ Specifying, page 563

Surface Materials

Side support bracket and reinforcing channel

- Black paint only

Cantilever, center support panel, and end panel

- Paint

Application Topics

Worksurfaces greater than 30"D can only be used in freestanding applications.

Worksurfaces used in panel-supported installations must follow applicable panel stability guidelines.

▶ Page 142

Off-Module Worksurface-to-Panel Connector

Connector attaches into the slotted channels of the panel junctions.

Product Details

Connects 18"D to 30"D worksurfaces to wider panels eliminating the need to match panel width to worksurface depth. Replaces side supports, cantilevers, and the need for front edge support with 30"D worksurfaces.

Off-module bracket
Slatwall skin

Off-module worksurface to panel connector cannot be used in front of or on the adjacent panel next to a 12"H or a 24"H slatwall skin positioned in the second 12" skin module from the base of the panel.

Surface Materials

Connector
• Paint

Application Topics

Worksurface can be positioned anywhere along the width of the off-module connector.

Off-module worksurface to panel connector cannot be used at the same elevation on adjacent in-line panels.

Off-module worksurface-to-panel connector can be used to support the diagonal end of a Universal straight 120° worksurface.

Off-module worksurface to panel connector can support a single worksurface only.

Off-module worksurface to panel connector cannot replace cantilevers and side support brackets when worksurface is parallel to the panel.

Actual Dimensions

Depth	1/2"
Width	34", 30", 36", 42", 48", 60", or 72"
Height	3"

FrameOne Legs and Supports for Universal Worksurfaces

Legs and supports share a common visual with FrameOne bench and support Universal worksurfaces in freestanding, storage-supported, or panel-supported applications. ▶ Specifying page 566

Spacers between top of legs and worksurface provide a floating look to the worksurface and match visual of FrameOne bench.

Intermediate support is used with Universal One-High or 1.5-High storage as a worksurface support allowing for nesting of low storage.

Leveling glide allows worksurface height to be adjusted on uneven floors.

Post leg is square to provide a complementary visual to FrameOne legs. Post leg can be used as a column support.

Product Details

Closed, open, and half-loop legs are handed when panel supporting and must be specified left or right when facing the front of the worksurface. Freestanding tethered and table versions are non-handed.

Closed, open, and half-loop legs are available in panel supporting versions. They support the ends of worksurface; they are not shared supports between two worksurfaces.

Closed and open-loop legs are available in tethered versions in which one side of the worksurface is attached to a panel or storage.

Dimensions

	Closed, Open, and Half-Loop Legs	Post Leg	Intermediate Supports	
			For One-High storage	For 1.5-High storage
Height*	28½"	28½"	28½"	28½"
Height	N.A.	N.A.	11¼"	5¼"
Depth	24" or 30"	N.A.	16"	16"
Width	N.A.	N.A.	29/16"	29/16"
Glide range	2¼"	1"	N.A.	N.A.

*Height dimensions include the thickness of the worksurface.

Closed and open-loop legs are available in table versions in which both sides of the worksurface are supported by the legs. Post legs can also be used to create freestanding tables.

Half-loop leg is always panel supporting, however panels cannot exceed 48"H or support overhead storage above.

Closed, open, and half-loop legs do not align properly with knife-edge worksurfaces. Instead use cantilevers.

▶ See page 238 for knife-edge worksurface application guidelines.

27"H mobile, freestanding, or fixed pedestals do not fit flush to the inside of the closed, open, or half-loop leg, there is a 3" gap due to the worksurface support plate. 25½"H freestanding pedestals or 21"H mobile pedestals will fit flush.

27"H mobile, freestanding, or fixed pedestals do not fit flush to the inside of the post leg, there is a 5¾" gap due to the worksurface support plate. 25½"H freestanding pedestals or 21"H mobile pedestals will fit flush.

Post leg can be shared between two worksurfaces.

Post leg in shared applications can be square or oriented angled to the front edge of the worksurface.

Intermediate supports replace the need for other types of worksurface support when used with One-High or 1.5-High Universal storage.

Steel top storage requires additional bracing inside the storage when used with an intermediate support. Bracing is an option to the intermediate support and is specified to match the width of the storage.

Bracing is field-installed.

Number of braces is determined by the orientation of the intermediate support to storage. It is not determined by the orientation of the worksurface to storage.

Side-to-side (parallel) orientation of intermediate support relative to storage requires one brace.

Front-to-back (perpendicular) orientation of intermediate support relative to storage requires two braces.

Storage with laminate or wood tops do not require additional bracing with intermediate support.

Side-to-side (parallel) application of intermediate support allows worksurface to be oriented perpendicular to storage.

Front-to-back (perpendicular) application of intermediate support allows worksurface to be oriented in-line with storage.

Intermediate support must be at least 1" from the front, back, or side edges of the storage unit to allow clearance for installation.

On cabinets with steel tops, in parallel applications, the intermediate support can be positioned left or right 1" or 7" from the side edge of the storage unit to align with bracing hole locations and can be positioned anywhere front to back on the unit. On cabinets with laminate or wood tops, in parallel applications, the intermediate support can be positioned left or right anywhere between 1" and 7" from the side edge of the storage unit.

On cabinets with steel tops, in perpendicular applications, the intermediate support can be positioned left or right 1" or 7" from the side edge of the storage unit to align with bracing hole locations and can be positioned anywhere front to back on the unit. On cabinets with laminate or wood tops, in perpendicular applications, the intermediate support can be positioned left or right anywhere between 1" and 7" from the side edge of the storage unit.

Worksurfaces 18"D to 24"D allow intermediate support to be positioned below the worksurface 1" from the front or back.

Worksurfaces 24½" to 30"D must be placed a minimum of 1" from the front or back edge, and a maximum of 7" from the front or back edge.

Intermediate support cannot support worksurfaces larger than 30"D.

FrameOne Legs and Supports for Universal Worksurfaces, continued

Worksurface may extend up to 10" maximum overhang of intermediate support as long as the other end of the worksurface is anchored to the panel.

Surface Materials

Legs and intermediate support

- Paint

Spacer caps for panel attached legs

- Black plastic only

Glide cap for legs

- 6694 Slate only

Shipping

Closed, open, and half-loop legs are packed in boxes of six when ordered on the same line item.

Bracing for intermediate supports ship separately from intermediate supports and are field installed into storage cases.

Infills for FrameOne Legs for Universal Worksurfaces

Infills for FrameOne Legs for Universal Worksurfaces

Infills are available in laminate and veneer and are used with open and closed loop FrameOne legs.

► Specifying page 567

Infills provide added privacy.

Product Details

Infills can be used with both panel connected or freestanding versions of open and closed loop FrameOne legs for universal worksurfaces.

Connectors attach to the back side of the legs.

Surface Materials

Surfaces

- Laminate
- Veneer

Planning Dimension

Infills are available 24"W and 30"W.

Legs and Columns for Universal Systems Worksurfaces

Without Alignment Tab

Legs are available to support worksurfaces in free-standing or panel-supported applications.

► Specifying, page 552

Double post C-leg

can be used on a single worksurface or in a shared application.

Post leg can be used on a single worksurface. Non-locking caster and glide versions are available.

Column is 4" in diameter and can be used as a column support on a single worksurface. Adjustable and non-adjustable versions are available.

Double post leg can be used as a column support on a single worksurface or to support a shared application.

Adjustable-height leg can be used with a single worksurface. Locking caster and glide versions are available.

Adjustable-height leg adjusts from 25½"H to 31½"H in ¾" increments.

Support plate can be used with a double post leg to join and support two worksurfaces. Plate is 14"D or 20"D and 31¼"W.

Leveling glide allows worksurface height to be adjusted on uneven floors.

Actual Dimensions

	Column	Adjustable column	Double post leg	Post leg	Adjustable-height leg	Double post C-leg	Support plate
Height*	28½"	28½"-31⅝"	28½" or 40⅞"	26", 28½", or 40⅞"	25½"- 31½"	28½"	N.A.
Glide range, for legs equipped with glides	1½"	3⅛"	¾"	¾"	¾"	¾"	N.A.

*Height dimensions include the thickness of a worksurface.

Product Details

Legs support Systems Worksurfaces at 26"H nesting, 28½"H standard, 40⅞"H standing or 25½"H to 31½"H adjustable heights.

Legs for Systems Worksurfaces do not include alignment tabs. Pilot holes help the installer locate the proper leg position under the worksurface.

Post legs are always installed at a 45° orientation.

26"H nesting height legs allow worksurfaces to nest underneath an adjacent worksurface supported with 28½"H legs or a panel-supported worksurface.

Double post leg can be used in a shared application with a support plate, or it can be used as a column support for spanner, jetty, bubble jetty, bullet peninsula, angled peninsula, and linking peninsula worksurfaces in panel-mounted applications.

Post leg, in conjunction with two cantilevers or center support panels, can be used as column support for linking worksurfaces.

Post leg, in conjunction with a side support bracket, can be used to support the end of a visitor or taper-flat worksurface.

Two post legs can be used in place of one double post leg as column support for spanner, jetty, bubble jetty, bullet peninsula, and angled peninsula worksurfaces for added stability.

Standing-height post or double post legs can be used as column support in panel-mounted applications only.

Column can be used on spanner, bullet peninsula, angled peninsula, linking peninsula, jetty, and bubble jetty worksurfaces in panel supported applications.

For Answer Freestanding desk applications, column can be used on bullet peninsula and jetty worksurfaces. Adjustable and non-adjustable versions are available.

Column cannot be used in a shared application.

Bottom View Column Bottom View Post Leg

Column is not recommended for applications that include post legs because it has a round shape, while post legs are more of an elliptical shape. Use single or double post legs as a column support in applications that include other post legs.

Adjustable-height legs adjust from 25½"H to 31½"H in ¾" increments. Legs can be used to support the primary worksurface, or legs can support a worksurface in a nesting application.

P-edge profile work-surfaces include alignment slots to accept cabby legs as an alternative column support for visual consistency in applications that include tables with cabby legs. Panel-mounted spanner, bullet peninsula, linking peninsula, jetty, and bubble jetty worksurfaces accept two legs. Visitor and linking worksurfaces accept one leg.

Worksurface spans greater than 54" require additional support of a cantilever, pedestal, intermediate support, or leg. Exception: Worksurfaces can span up to 60" in heavy load applications and up to 72" in light load applications if a TS7WKSPT reinforcing channel is used. Reinforcing channel must be specified separately. ▶ Specifying, page 563

Application Topics

Stability Guidelines

- ▶ Page 142

Knife Edge Worksurface Application Guidelines

When planning an L-configuration, two UFB flat brackets should be used to support the worksurfaces. A cantilever is not wide enough to support the gap where the knife edge worksurface comes together.

Freestanding L-configuration should be avoided due to profile on the backside of the worksurface.

25 1/2"H Pedestal
(cantilever supported worksurface)

Boxfile
(cantilever supported worksurface)

Compatible storage includes 25 1/2"H pedestal with freestanding conversion kit, box/file mobile pedestals, and 1-high storage.

Knife Edge with 27"H Lateral
and 27"H Pedestal

Knife Edge with 25 1/2"H Pedestal

Knife edge worksurface over 27"H storage can make files difficult to access. Use a 25 1/2"H pedestal that is flush with the front edge of the worksurface to avoid this issue.

Knife edge worksurfaces require reinforcement channels for unsupported spans greater than 48". Use TS7WKSPT39 for 54"W worksurfaces, TS7WKSPT for 60"W and 66"W worksurfaces, and TS7WKSPT72 for 72" worksurfaces.

Although a 25 1/2"H pedestal looks good when paired with knife edge, keep in mind that it does not align with other storage – drawers and base trim do not align. Use a box/file mobile pedestal instead.

End panels, 27"H standard pedestals, side support brackets and FrameOne legs for Universal do not align properly with knife edge worksurfaces. Instead, use cantilevers as shown.

**Side support brackets will work to support the back end of a worksurface; front end is where they won't align properly.

Universal Boundary Screens

Boundary screens are available for use with Answer, FrameOne, and Universal worksurfaces to provide light scale space division and privacy for a variety of worksettings.

Universal boundary screens attach to universal square edge worksurfaces to provide privacy and modesty in a variety of widths and heights.
 ▶ Specifying, page 572

Screens are available in laminate and wood veneer.

Screens are rectangular and available in a variety of heights and widths in modular and parametric dimensions.

Screens are suspended from universal worksurfaces by brackets attached to the underside of a worksurface. They do not rest on floor.

Boundary screens have a 3/4" thickness.

Actual Dimensions

Height 15", 21", 27", 30", 33", 36", 39", 42", 48", or 54"

Installed Height 30", 36", 42", 48", or 54"

Width 24", 30", 36", 42", 48", 54", 60", 66", or 72"

Clearance (from floor) 0" or 15"

Thickness 3/4"

Tip: Screen height is available parametric from 15"H–54"H in 1/16" increments.

Tip: Screen installed height can be specified parametric from 30"H–54"H in 1/16" increments.

Tip: Screen width can be specified parametric from 24"W–72"W in 1/16" increments.

Tip: Screen clearance from the floor can be specified parametric from 0"–15"H in 1/16" increments.

Product Details

Flat edge profile
 P-edge edge profile
 Knife edge profile

Universal boundary screens are applicable on flat, back edge of panel mounted, tethered, and freestanding universal worksurfaces. Each application type has height, width, and placement guidelines that must be maintained. ▶ See page 248

Universal boundary screens may not exceed the width of the worksurface in any application. See *Universal Freestanding Applications*, page 246, for maximum height and width rules on freestanding worksurfaces. See *Panel-Mounted and Tethered Connections*, page 250, for maximum height and width rules on panel-mounted and tethered worksurfaces.

Boundary screen height is determined by identifying the installed height of the top of the screen minus the clearance from bottom of the screen to the bottom of the leg.

Installed height on modular universal boundary screens align with the actual height of Answer thin trim panels. Installed height is based on the worksurface being installed at 28 1/2"H and the leg glide screwed all the way in (post leg glide is 3/8" at minimum). Pilot holes are predrilled in the boundary screen for this condition. ▶ See page 14 for thin trim actual heights. *Tip: Parametric assumes the same worksurface height and glide allowance.*

Installed height of any universal boundary screen, modular or parametric, must be 54"H or less off floor.

Clearance at the bottom of screen is 0" or 15"H above the bottom of the leg for the modular option. Clearance at the bottom of screen to the bottom of leg for the parametric screen is 0" to 15"H in 1/16" increments. *Tip: The boundary screen can never be more than 15"H above the bottom of the leg.*

Boundary screens width cannot exceed the width of the worksurface or extend past the end of the worksurface it is attached to. Boundary screens with freestanding worksurfaces have additional sizing restrictions. ▶ See page 246

Connections

Bracket placement is predrilled based on the specified height of the top of screen and the specified clearance from the bottom of the screen to the bottom of the leg. Brackets are located 7 1/2" from the outside edge on each side of the screen. They are 4"D x 2 1/8"W x 4"H.

Screen brackets can be mounted flush or mounted to allow a 1/2" gap for cord drop. Flush mount adds 3/4" to overall depth of worksurface. If mounted to allow cord drop the overall depth is 1 1/4".

Wiring and Cabling

Boundary screens do not accommodate cable-routing. Plan accordingly when installing boundary screens on worksurfaces with other cable routing accessories.

Wire managers are available to conceal cords that are routed beneath the worksurface. They must be at least 4 1/2" from the back of the worksurface to not interfere with the screen brackets.

Surface Materials

Boundary screens

- Laminate
- Wood veneer

Edge on laminate

- Plastic

Bracket

- Paint

Wood grain laminate is only available on surfaces less than 60"W. No restrictions for veneer.

Open Line laminates with grain direction can be applied vertically only. Open Line laminates are not allowed on screens that are 60"W or wider.

Application Topics

See additional understanding pages for panel-mounted and tethered applications, page 250, and freestanding applications, page 246.

Freestanding Applications

Boundary screen attaches to universal worksurfaces with included brackets. Brackets are located 7 1/2" from the outside edge on each side of the screen. They are 4"D x 2 1/8"W x 4"H.

Bracket placement is based on the installed height of the top of screen and the specified clearance from bottom of the screen to bottom of the leg.

Bracket holes are predrilled based on screen dimensions and application. Screen brackets cannot overlap with table leg brackets. Legs may need to be moved to an alternate position in order to avoid interference with the screen brackets.

Screen brackets can be mounted flush or mounted to allow a 1/2" gap for cord drop.

Boundary screen attaches to flat, back edge of universal worksurfaces only with the following base types: cabby leg with glide only, elliptical leg, post leg, double post C-leg, FrameOne open, or closed loop legs.

Universal boundary screens may not be used on freestanding tables with casters.

Applications are considered freestanding when they have no structural connection and do not meet the tethered or panel connected requirements. ▶ See page 250 for panel-mounted and tethered connections.

Freestanding tables may be used with boundary screens. Table size, shape, connected configuration; as well as possible location, height, and weight being added to application are factors that determine stability limits.

Straight

Transitional

Tapered

Corner

Bullet Peninsula

Jetty

Bubble Jetty

Boundary screens attach on the square edge of universal straight, transitional, tapered, bullet peninsula, corner, jetty, and bubble jetty.

Boundary screens are not intended for use on the depth edge of surfaces.

Maximum allowed width of a screen is determined by the installed height, screen clearance, and worksurface width.

To ensure stability, any boundary screen applied in a freestanding application must not exceed the size listed in matrix, on page 247.

Boundary screens are not permitted on height adjustable desks as they do not pass minimum safety requirements which could result in the desk tipping over.

Freestanding Applications, continued

0"H Screen Clearance

Use when clearance at the bottom of screen is 0"H.
 Tip: The bottom of the screen aligns with the bottom of the table leg.

Use the width of your table and installed height of your screen to determine the appropriate screen size for your application.
 Tip: Maximum screen width listed.
 Tip: If between table width sizes, refer to smaller size for both modular or parametric.
 Tip: If between screen heights, refer to next highest size.

Installed Screen Height Modular/ Parametric	Table Width												
	24"W	30"W	36"W	42"W	48"W	54"W	60"W	66"W	72"W	78"W	84"W	90"W	96"W
	Maximum Screen Width												
30"H 30"H to 35 ¹⁵ / ₁₆ "H	24"	30"	36"	36"	48"	54"	60"	66"	72"	72"	72"	72"	72"
36"H 36"H to 41 ¹⁵ / ₁₆ "H	24"	30"	36"	36"	36"	36"	36"	36"	60"	60"	60"	60"	60"

Boundary screens attached to freestanding tables, connected in end-to-end, may have one screen on one segment that meets the width and height guidelines. The screen can attach to segment A or B, but not both. Width must be equal to or less than that listed for the worksurface width per specified height.

Universal tables connected end-to-end or in an L-configuration, where one segment extends at least 24" past the front edge of adjacent unit, may have boundary screen attached to it as long as each screen is equal to or less in width to that listed in matrix.

► See page 246

Jetty or bubble jetty freestanding tables can have boundary screen of equal or less width on one or both of the straight sides if they are attached to another table. In this situation each surface segment width determines the permitted width of the boundary screen boundary per the matrix.

► See page 246

In-line connected tables with shared supports are allowed one boundary screen on one segment only.

Spanning in-line tables or two freestanding tables is not permitted.

Freestanding Applications, continued

Boundary screen can be used on worksurfaces that are supported at one end with intermediate support as long as the support is screwed to the top of the storage in addition to the underside of the worksurface.

Panel-Mounted and Tethered Applications

Boundary screens are considered panel-mounted or tethered when the universal worksurface is supported by a panel or is secured to a worksurface which is connected to a panel.

Boundary screens are attached to universal worksurfaces with included brackets. Brackets are located 7 1/2" from the outside edge on each side of the screen. They are 4"D x 2 1/8"W x 4"H.
Tip: Worksurfaces mounted to a panel, storage, or another worksurface require no less than two connection points when used with boundary screens.

Boundary screens can be attached to the back edge of worksurfaces that are supported by side supports at the front and back edge, end panels, fixed pedestals, FrameOne open or closed loop legs, one cantilever and one side support, one center support and one side support, or one end panel.

Worksurfaces attached to a panel using a side support bracket, a cantilever, or center support panel must also use a side support bracket at the back edge when a boundary screen is attached.

Universal boundary screens can be attached to panel-mounted, flat, back edge of worksurfaces using two side support brackets.

Boundary screens brackets cannot overlap with support plates or structure of worksurface support.

Boundary screens can attach to the width edge of panel supported worksurfaces as well as worksurfaces in a variety of panel-mounted and tethered configurations.

Universal tables connected perpendicular to each other with a shared support plate where the return is at least 24"D and extends 24" past the user edge of main surface. A boundary screen can connect on one or both of sides in widths equal or less than the table segments.

Universal tables can include a corner connected on both sides by straight table with shared support plates. Boundary screens can connect to one or all sides in widths equal or less than the table segments.

Universal tables create U configuration where segments are connected with shared support plates and each segment extends at least 24" beyond user edge of adjacent table. Boundary screen can connect to one or all of sides in widths equal to or less than the table segments.

Boundary screens can be attached to worksurfaces that are supported at one side by worksurface to storage bracket applications (i.e. Universal towers, wardrobes, and lateral files).

Panel-Mounted and Tethered Applications, continued

Clearance of screen to bottom of leg is 0"H to 15"H

Installed Screen Height Modular/ Parametric	Worksurface Width												
	24"W	30"W	36"W	42"W	48"W	54"W	60"W	66"W	72"W	78"W	84"W	90"W	96"W
	Maximum Screen Width												
30"H 30"H to 35 ¹⁵ / ₁₆ "H	24"	30"	36"	42"	48"	54"	60"	66"	72"	72"	72"	72"	72"

54"H	24"	30"	36"	42"	48"	54"	60"	66"	72"	72"	72"	72"	72"

Use when clearance at the bottom of screen is 0"H to 15"H.

Tip: The bottom of the screen aligns with the bottom of the table leg.

Use the width of your worksurface and installed height of your screen to determine the appropriate screen size for your application.

Tip: Maximum screen width listed.

Universal Privacy/Modesty Screens

Universal privacy/modesty screen provides a boundary element for height adjustable desks and fixed worksurfaces. It can be used with Ology, Migration, Series 5 and 7 worksurfaces, Elective Elements, Universal tables, and Universal panel-mount worksurfaces.

► Specifying, page 575

Universal privacy/modesty screens are available in one height, 25⁷/₁₀" , with two mount location options to provide either privacy or privacy/modesty.

Universal privacy/modesty screens cannot be used on surfaces that have integrated rails or an additive SOTO rail.

Universal privacy/modesty screen is pin tackable.

The screen is attached to the worksurface using simple L-brackets and 1" screws.

Product Details

The edge of the screen is comprised of two different materials. The upper segment is merle plastic. The lower portion is felt which can be specified in light heather grey to provide contrast or dark heather grey for a uniform visual.

The screen may be used on 3/4"-1 1/2" thick worksurfaces.

The width of the screen can be equal to or less than the width of the worksurface to which it will attach. Some restrictions apply due to location of worksurface legs and supports.

Surface Materials

Screen

- Fabric
- See *Surface Materials*, page 692.

Edge (upper segment)

- 7360 Merle

Edge (lower segment)

- P630 Light Heather Grey
- P631 Dark Heather Grey

Brackets

- 7360 Merle

Actual Dimensions

Universal Privacy/Modesty Screen

Width	42", 48", 54", 60", or 66"
Height	25 ⁷ / ₁₀ "
Weight	9.79 lb, 10.315 lb, 10.84 lb, 11.365 lb, 11.89 lb
Thickness	3/4"

Application Topics

Universal privacy/modesty screen mounts to worksurfaces using simple L-brackets and screws. The brackets are positioned 3 3/4" in from each side of the screen.

Screen height attachment locations are determined when specifying privacy (top of screen will be at 48") or privacy/modesty (top of screen will be at 42"). The location cannot be changed in the field.

Privacy configuration provides 19 1/2" of screen above the worksurface and 5 1/2" of screen below the worksurface. The height is measured from the top of the mounting surface to the top of the screen, and from the bottom of the mounting surface to the bottom of the screen. The top of the screen will align with the bottom of the top trim on a 48"H Answer panel.

Screen can be mounted with a 1 1/8" cord drop or flush with no cord drop.

Privacy/modesty configuration provides 13" of screen above the worksurface and 11 7/10" of screen below the worksurface. The height is measured from the top of the mounting surface to the top of the screen, and from the bottom of the mounting surface to the bottom of the screen. The top of the screen will align with the bottom of the top trim on a 42"H Answer panel.

Both the privacy and privacy/modesty configurations allow the height-adjustable desks to be lowered to the lowest position (22") while preserving pinch point gap. Privacy version will not interfere with integrated storage.

Universal privacy/modesty screens can be used with universal worksurfaces and tables where surface supports and leg brackets are not in same location of the screen L-bracket attachment points.

- Example 1 - Worksurfaces supported by a panel side bracket or cantilever can accept privacy/modesty screen placed 6" in from end with these brackets.
- Example 2 - Tables with cabby leg or double elliptical post C-legs can accept screens 6" shorter than total table width but not same width.

Privacy/modesty screens can also be used with Elective Elements surfaces with some restrictions when combined with gate leg or the Elective Elements adjustable-height leg.

Privacy modesty screens must never be wider than the surface to which they are attached.
Tip: It is recommended that CET SmartTools Planning aid be used to ensure proper application of screen to work-surface or tables.

When used with One-High integrated storage, Universal privacy/modesty screens must be a minimum of 18" shorter than worksurface width to allow for pinch point clearances.

Universal Privacy Screens and Aligners

Universal privacy screens provide a boundary and privacy element for height adjustable desks and fixed worksurfaces. It can be used with Ology, Migration, Series 5 and 7, Elective Elements, panel-supported Universal worksurfaces, and TS Series worksurfaces.

► Specifying, page 576

Actual Dimensions

Height	12½" or 18½"
Overall Height	13½" or 19½"
Width	24", 30", 36", 42", 48", 54", 60", 66", or 72"

Tip: 13½"H screen aligns with a 42" datum from the floor. 19½" screen aligns with a 48" datum from the floor.

Product Details

Universal privacy screens are tackable and available in 13½"H and 19½"H, and have widths from 24"W to 72"W.

The edge of the screen is comprised of two different materials. The upper segment is merle plastic. The lower portion is felt which can be specified in light heather grey to provide contrast or dark heather grey for a uniform visual.

The screen may be used on ¾"-1½" thick worksurfaces.

The width of the screen can be equal to or less than the width of the worksurface to which it will attach. Some restrictions apply due to location of worksurface legs and supports.

When fabric screens are placed directly adjacent to each other, a small aligner can be placed in between the screens at the top to connect them for planar alignment. Aligners are ordered separately in packages of 10.

Brackets are included with screens. Two brackets are used on all screens.

Universal privacy screen slides onto brackets.

Surface Materials

Screen

- Fabric
- See *Surface Materials*, page 692.

Edge (upper segment)

- 7360 Merle

Edge (lower segment)

- P630 Light Heather Grey
- P631 Dark Heather Grey

Brackets

- 4799 Platinum
- 7241 Textured Arctic White
- 7360 Textured Merle

Knit Screens

Knit screens provide light-weight space division. All screens mount in two positions for either desktop privacy or below worksurface modesty. Available in four widths.

► Specifying page 578

Tubular frame connects to foot.

15"H Knit Screen

Cushion protects the worksurface from marring.

Knob can be tightened by hand and allows easy movement of screens.

Product Details

15"H screens mount to worksurfaces in privacy position or below the worksurface for modesty. In privacy applications, the overall height of the screen from the floor is 43 $\frac{1}{2}$ "H.

Gap between 15"H screen to top of worksurface is 1".

Gap between bottom of worksurface to 15"H screen is 1 $\frac{1}{2}$ ".

Connections

Clamps allow attachment to worksurfaces $\frac{1}{8}$ " to $\frac{13}{16}$ " thick, which include Universal Worksurfaces and Tables, and Answer worksurfaces. Clamps cannot be used with Series 9000 and Avenir 1 $\frac{1}{2}$ " thick worksurfaces.

Clamps are specified as a pair and ordered separately from the screen.

Actual Dimensions

15"H Knit Screen

Screen width	20 $\frac{1}{4}$ ", 26 $\frac{1}{4}$ ", 32 $\frac{1}{4}$ ", or 38 $\frac{1}{4}$ "
Overall width	21 $\frac{1}{2}$ ", 27 $\frac{1}{2}$ ", 33 $\frac{1}{2}$ ", or 39 $\frac{1}{2}$ "
Height	15"

Tip: Overall width includes the width of both clamps.

15"H screen mounts to the top or bottom of the clamp.

Multiple screens can share clamps that attach to a worksurface.

Three clamps can be used to support screens of various sizes.

15"H screens can be applied to the side of a worksurface.

For corner privacy applications where 15"H screens are desired on the back and side of the worksurface, the screen for use on the side of the worksurface should be specified 6" smaller. For example, a 30"D x 42"W worksurface with a 38 1/4"W x 15"H screen on the back, requires a 20 1/4"W x 15"H screen on the side.

Screens can be planned to match the width of the worksurface. However, if worksurfaces are slip-fit, screen sizes must be planned accordingly.

For corner, 120° table applications, the following screens can be used:

- 20 1/4"W screens can be used on tables with dimensions C and D each equal to 43".
- 20 1/4"W and 26 1/4"W screens can be used on tables with dimensions C and D each equal to 49".

Tip: Corner, 120° tables with dimensions C and D each equal to 37" cannot accommodate screens.

Surface Materials

Vertical surface fabric

Applies to knit screen:

- B902 Soft White
- B903 Fog
- B904 Sand

Screen frame and foot

- 4799 Platinum only

Clamp

- 4799 Platinum only

Clamp adjustment knob and cover

- 7237 Slate only

Application Topics

15"H screens can be used on fences in Post and Beam applications. For attachment hardware style number and additional information, refer to the *Post and Beam Solutions Specification Guide*.

Divisio Side Screen

Divisio side screen is magnetic and provides a territorial boundary between users. The user-movable functionality allows users to decide when and where they need additional privacy. The screens may be used on any 3/4"- to 1 1/2"-thick worksurface.

► Specifying, page 580

Product Details

Divisio side screen can be made more permanent by adding two screws through the clamp. For 3/4" thick worksurfaces, c:scape, and FrameOne, a #10 x 3/4" countersunk screw is recommended. For worksurfaces over 3/4" thick, a #10 x 7/8" countersunk wood screw is recommended.

Actual Dimensions

Depth	29 1/2" (total), 21 1/2" (sits on worksurface)
Width	1 1/4"
Height	14 1/4" (total), 11 5/8" (above worksurface)

Universal Tables

Universal tables can be used in a variety of individual and team settings.
 ▶ Specifying tables, page 592

Table top has a wood core with a High-Pressure Laminate or wood veneer surface and is 1³/₁₆" thick.

Radius corner eliminates sharp edges and is appropriate for freestanding, mobile furniture.

Edge profile is continuous around all edges of the table.

Product Details

High-Pressure Laminate Tables

Continuous edge profile is available in two shapes.

3 mm edge profile

P-edge profile

Knife edge profile

PVC-free, 3 mm edge profiles are a proprietary polyolefin blend for all solid colors and seven woodgrain finishes. See surface material listing in this book for specific PVC-free availability.

P-edge profile rises slightly above the laminate surface and curves into a 3/8" radius, which optimizes ergonomic benefit for the user.

Knife edge with 3 mm user edge is available on straight and tapered systems worksurfaces and on round tables.

Edge profile finishes are specified separately from laminate color.

Wood Veneer Tables

Edges of worksurfaces are available in square (3 mm) profile.

Square (3 mm) edge profile

Square (3 mm) edge profile is achieved by adding wood veneer surfaces to table core. This technique can be applied to tables that are straight or curved.

Connections

Universal tables are supported by bases or legs, which are ordered separately and installed in the field.

Use the Table and Base Combinations matrix to determine the type and number of bases you need to order for the tables you choose.

Tip: Not all sizes and shapes of tables can be supported by bases.

▶ Page 274

Use the Table and Legs Combinations matrix to determine the type and number of legs you need to order for the table you choose.

Tip: Not all sizes and shapes of tables can be supported by legs.

▶ Page 274

Reinforcing channels are available to support tables that are wider than 60"W and supported by legs. When installed, the channels add 1" below the table. Channels are available as an option on larger tables and are field installed. Select the reinforcing channel option if the table will be supported by legs. Channels are not required if the table is 96" or smaller and will be supported by T- or X-bases. Channels are required and are always included with tables 120" and larger.

Underside of table has inset locations that support slip-fit and nesting applications. Caddy legs can be positioned in a 45° or 90° orientation. Post legs are positioned in 45° orientation only.

▶ See *Table Leg Positions*, page 276.

90° orientation

45° orientation

Legs installed in a 90° orientation allow for greater storage and kneespace below the table.

45° leg orientation is a preferred aesthetic for many customers. Caddy legs installed at a 45° orientation will appear to have more curvature when viewed from the front edge of table.

Legs may be installed inset from the edge of the table to accommodate slip-fit planning. Amount of available space (3", 6", or 9") is measured from the edge of the table to the edge of the leg. Amount of slip-fit varies by table shape and size.

▶ See *Table Leg Positions*, page 276.

Slip-fit planning allows workstation footprint to expand or decrease, and is ideal for off-module applications.

Table with 28 1/2" H legs installed at 6" or 9" inset can slip over adjacent tables that are supported with 26" H legs.

Adjustable-height legs adjust 25 1/2" H to 31 1/2" H in 3/4" increments. Legs can be used to support the table in a standard height or nesting application.

26" H legs allow tables to nest underneath an adjacent table with 28 1/2" H legs or a panel-mounted worksurface.

Spanner table enables conferencing at the end of two tables that are placed back-to-back.

52" W or 64" W spanners should be used when tables are separated by a panel or Post and Beam.

- Full-fill finish (option)

Square (3 mm) edge profile

- Wood veneer to match table

Application Topics

Table Fit in Panel Environments:

Dimensions on straight and transition tables are 1/4" less than nominal dimension. This allows for an easy fit of freestanding tables in panel-wrapped environments and allows tables to move in and out of the area with ease.

Example: A 48"W x 72"W corner is actually 47³/₄"W x 71³/₄"W.

Mobile pedestals up to 24¹/₂"H will fit under 26"H tables without reinforcing channels.

Mobile pedestals up to 27"H will fit under 28¹/₂"H tables without reinforcing channels.

Tables with reinforcing channel will reduce the available space by 1".

Screens can be used on corner, 120° tables.

- 24"W screens can be used on tables with dimensions C and D each equal to 43".
- 24"W and 30"W screens can be used on tables with dimensions C and D each equal to 49".

Tip: Corner, 120° tables with dimensions C and D each equal to 37" cannot accommodate screens.

Shipping

Palletizing streamlines unloading and staging of worksurfaces. Identical worksurfaces ordered on the same line item are packed on pallets containing 5-50 worksurfaces depending on worksurface size. Remaining worksurfaces are packed individually in cartons. If palletizing is not desired, order in quantities of four or less per line item. For maximum unload efficiency, utilize pallet handling equipment at job site whenever possible. Wood veneer worksurfaces cannot be palletized.

Hex conference tables 150"W or larger are shipped in two pieces. Tight-joint fasteners are supplied for proper assembly.

Bases for Universal Tables

Pedestal-base tables

fill a variety of needs for conference and work tables in general offices, institutions, and educational work spaces. Tables and bases are ordered separately.

► Specifying, page 607

Adjustable leveling glides

allow tables to remain level when installed on uneven floors.

Column support includes a cylindrical steel column and a base with feet.

Table and Base Combinations

► Page 274

Shipping

Bases are shipped knocked down (K.D.) and will require assembly.

Legs for Universal Tables

Legs attach to a table to make it freestanding or tethered to Post and Beam.
 ▶ Specifying, page 608

Alignment tab helps installers locate proper leg position under the table.

Cabby leg and adjustable-height legs are available with locking casters or glides.

Post legs are available with non-locking casters or glides.

Double post C-leg is an individual support and is used at the ends of a table.

Leveling glides, included, allow table height to be adjusted on uneven floors.

Elliptical leg is available in glide version, either nesting or desk-height.

Adjustable-height leg adjusts from 25½"H to 31½"H in ¾" increments.

Product Details

Legs support tables at 26"H or 28½"H overall, including table thickness.

Table legs are ordered separately and installed on site.

▶ See *Table and Leg Combinations*, page 275.

Table legs are non-handed to accommodate left- and right-hand applications.

Table legs cannot be used in a shared application with two tables. Radius corners do not provide enough attachment space for leg plate. When a shared leg application is required, order Universal Systems Worksurfaces.

Cabby legs can be installed in either a 45° or 90° orientation on most tables. Elliptical leg installed in the first inset position may only be in a 45° orientation. Single post legs can only be installed in a 45° orientation.

▶ See *Table Leg Positions*, page 276.

Actual Dimensions

	Cabby leg	Adjustable-height leg	Elliptical leg	Post leg	Double post C-leg
Height* (standard)	26" or 28½"	25½"–31½"	26" or 28½"	26" or 28½"	28½"
Glide range, for legs equipped with glides	¾"	¾"	5/8"	¾"	5/8"

*Height dimensions include the thickness of a table.

Legs installed in a 90° orientation allow for greater storage and kneespace below the worksurface.

45° leg orientation is a preferred aesthetic for many customers. Cabby legs installed at a 45° orientation will appear to have more curvature when viewed from the front edge of worksurface.

Legs may be installed inset from the edge of the worksurface to accommodate slip-fit planning. Amount of available space (3", 6", or 9") is measured from the edge of the worksurface to the edge of the leg.

Slip-fit planning allows workstation footprint to expand or decrease, and is ideal for off-module applications.

Alignment tab corresponds to under worksurface alignment slots in tables. Alignment features ensure legs are installed in the proper 45° or 90° orientation and slip-fit position.

Table with 28½"H legs installed at 6" or 9" inset can slip over adjacent tables that are supported with 26"H legs.

Adjustable-height legs adjust 25½"H to 31½"H in ¾" increments. Legs can be used to support the table in a standard height or nesting application.

26"H legs allow tables to nest underneath an adjacent table with 28½"H legs or a panel-mounted worksurface.

► See *Post and Beam Solutions Specification Guide* for tethered capsule tables support information.

Tip: Hex conference tables and oval tables 42"D x 78"W and larger, can only be supported with T-bases.

1 = Number of legs to order.
Blank spaces in matrix designate table and leg combinations that are not valid.

Table Leg Positions

Table leg positions allow for slip-fit and nesting capabilities. Both 45° and 90° angled leg positions are available on most tables. However, certain tables accommodate either 45° or 90° angled positions only. Leg positions on the underside of tables are shown at right.

Legs installed in positions 1, 2, or 3 will vary in their distance from the worksurface edge:

Position 1 is 3" from edge
Position 2 is 6" from edge
Position 3 is 9" from edge
Tip: Positions 2 and 3 are not available on every table.

Wiring and Cabling Accessories

Power and Data Strip

Powerstrip with cord and worksurface bracket

Powerstrip includes three simplex receptacles and space for customer-supplied voice/data outlets.

Powerstrip with cord and slatwall bracket

Bracket attaches to slatwall.

Product Details

Power and data strip provides additional electrical and voice and data receptacles.

Power and data strips are field-installed on either a worksurface or on slatwall. Specify appropriate attachment bracket depending on application.

Power and data strip worksurface bracket attaches to worksurfaces 5⁹/₆₄" to 1⁵/₈" thick.

Wiring & Cabling

Available with an 8'-long cord with plug.

Chicago, New York City, and Los Angeles have special requirements.

Underwriters Laboratory (UL) listed. These products have been designed to meet U.S. and Canadian national electrical and energy codes and most local building codes. Local electrical codes vary, so consult with your local authority having jurisdiction as they have final say if the products as installed are compliant with local code. Consult a qualified electrician or electrical engineer for proper installation of all electrical equipment.

Answer Monitor Mount

Answer media:scape Integration

Shared Worksurfaces and Answer media:scape Assembly

Answer media:scape integration will leverage Answer's technology and space division capabilities to provide a more seamless technology experience for collaboration in open plans. The worksurfaces are offered in two shapes, tapered and D-shaped, and can be mounted at seated or standing height. They allow users to share information through integrated technology displays and facilitate a seamless flow of information during meetings. The media:scape assembly includes the monitor mount, a media:well and two PUCKs.

► Specifying, pages 614-618

Monitors, to be used with media:scape integration, must be CEC compliant with an HDMI input. It is recommended that the monitor be commercial grade or equivalent.
Tip: Monitor not included with media:scape assembly.

One scaler is standard for a single monitor.

Media well is included with the media:scape assembly and offers two power outlets and two PUCKs.

Surfaces are available in both High-Pressure Laminate and wood veneer.

Shared worksurfaces are supported by cabby legs, column, or a standing-height column.

A shared worksurface, tapered or D-shaped, must be used in order to integrate media:scape technology. Worksurfaces have a 3 mm edge banding along all three exposed sides. 1 mm edge banding is used on the side adjacent to the panel.

► See page 614

Monitor mount assembly attaches to a 30"W Answer panel.

Wire manager is included with shared worksurface and manages the cords going into the panel.

PUCK (Personal User Control Key) enables the seamless flow of information between team members.
► See page 616
Tip: PUCKs are included with media:scape assembly.

Worksurface support bracket and cantilever locking brackets are included with shared worksurface.

Product Details**High-Pressure Laminate Worksurfaces**

Front (user's) edge profile is available in one shape.

PVC-free, 3 mm edge profiles are proprietary polyolefin blend for all solid colors and seven woodgrain finishes. See *surface material listing* in this book for specific PVC-free availability. Edge profile finishes are specified separately from laminate color.

Wood Veneer Worksurfaces

Front (user's) edge profile is wood veneer with a square (3 mm) radius. Back edge and edge that joins to adjacent worksurfaces are flat. Wood edge color matches finish specified for worksurfaces.

Steelcase Maintenance Agreement

media:scape worksurfaces include a one year Steelcase maintenance agreement to provide an enhanced support system for media:scape settings with digital components. The maintenance agreement covers:

- software/firmware enhancements
- expedited shipping for hardware replacements
- prioritized technical support

Maintenance agreement renewal options are available for one, two, and three year periods.
▶ Specifying, page 710

Application Topics

Answer media:scape assembly and shared worksurface must connect to a 30"W panel. A single, tackable acoustic skin must be used from the base to the top of the monitor mount assembly. Segmentation is allowed above the monitor mount.

Tip: A tapered shared work surface is shown in the illustration above. Monitor not included with media:scape assembly.

A 66"H or taller panel must be used when applying a shared work surface with standing-height column.

Tip: A D-shaped shared work surface is shown in the illustration above. Monitor not included in media:scape assembly.

Answer media:scape assembly can accommodate a 40" or 42" wide monitor or a maximum of 75 pounds.

Worksurface to Answer panel support bracket is included with shared worksurfaces, and must be connected to a 30"W Answer panel.

Power and Data

A power strip with four receptacles is included with the media:scape assembly. Three receptacles are available for powering the monitor, switch power supply, and virtual PUCK power supply (if utilized). The 60" cord runs through the panel, and receives power from the media well.

Tip: To specify Virtual PUCK, see page 618.

The media well comes standard with the Answer media:scape assembly. It includes a 120" cord that is routed from the well, through the wireway, into the panel, down to the floor, and plugged in outside of the panel.

Power kit and cable trays can only be located in the base of the 30"W panel when the monitor mount is used.

▶ Specifying, page 617

Surface Materials**High-Pressure Laminate Worksurfaces**

- Laminate

Answer Monitor Mount

Answer monitor mount attaches to Answer panels. It provides a clean aesthetic and can be used to project information in various applications. It is not used in conjunction with media:scape.

▶ Specifying, page 617

Monitor attachment brackets are used to attach monitor display to monitor mount.

Power strip is included in the monitor mount assembly, providing four receptacles.

Monitor mount connects to a 30"W panel only. Fabric skins are required when using the monitor mount.

Product Details

The monitor mount will affix to a 30" wide panel only. When using the monitor mount, fabric skins must be located behind monitor mount.

Power strip cord is routed in the interior of the panel and exits under the base trim. Plugging into the base is recommended. Monitor mount cord length is 10'.

Tip: An adapter may be required to make the connection to the IEC C13 receptacle on the power strip in the monitor mount.

Answer monitor mount can accommodate 40" and 42" monitors or a maximum of 75 pounds.

Application Topics

It is possible to place two monitors on an Answer panel run. Monitors will overhang adjacent panels.

Single monitors cannot be placed directly adjacent to one another. It is recommended to place a 30" panel between the two monitors.

Monitor mount can be used on panels 54"H and taller. Maximum height that the monitor mount can be installed at is 66"H. Minimum height that the monitor can be installed at is 24"H.

A horizontal seam between two skins cannot fall directly behind the monitor mount.

Monitor mount brackets must connect into in-line junctions. They cannot connect to L, T, or X junctions.

Stability Guidelines

For runs over 8' and up to 12'6", must use at least a 30"W return panel when using monitor mount or media:scape integration. The monitor mount is not to exceed 66"H.

Surface Materials

- 7237 Slate

Understanding Counterweights

Counterweights	288
Counterweight Requirements for Storage Products	289

Counterweights

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

If a counterweight is not required in any condition for a particular style number, the product specification page will indicate not required.

Counterweight Requirements for Storage Products, continued

Requirements for Freestanding Applications

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

1. Counterweights are not required for lateral files, towers, workstation verticals, cabinets, and bookcases anchored to the floor.

Floor anchor bracket (for TS Series Storage, TS 200 Series Storage, 900 Series Storage, 800 Series Storage and Universal Storage with 3" base) secures lateral files, towers, workstation verticals, cabinets, or bookcases to the floor for stability or to reduce the risk of hazards during earthquakes in seismic zones. Four bracket packages are required for each cabinet.

Note: Local seismic requirements vary. Compliance with local code requirements is the responsibility of the customer or their authorized agent. For a California Office of Statewide Health Planning and Development (OSHPD) approved anchor bracket, contact Steelcase Specials. Tip: Anchor bracket cannot be used with pedestals.

Floor anchor brackets for Universal with FrameOne foot secure lateral files and towers to the floor for stability or in seismic zones to reduce the risk of hazards during earthquakes.

Note: Local seismic requirements vary. Compliance with local code requirements is the responsibility of the customer or their authorized agent.

Wall Anchors

2. Counterweights are not required for lateral files, towers, workstation verticals, cabinets, and bookcases anchored to the wall.

For wall anchoring of lateral files, towers, workstation verticals, cabinets and bookcases, consult with the building's designated design professional (architect or engineer) and work with local codes authorities for approvals to ensure adequate support when product is fully loaded.

Ganging Brackets

3. Counterweights are not required for lateral files, towers, workstation verticals, cabinets, and bookcases ganged back-to-back with ganging hardware.

TS Series towers which do not include ganging hardware, order 8425808SR from Service Parts.

Counterweights

Units ganged side-by-side **require** counterweights.

Requirements for Panel Applications

Panel stability guidelines must be met prior to determining counterweight requirements.

► See *Panel Stability Guidelines* in the appropriate panel specification guide. (Storage may support panel stability)

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

1. Counterweights are not required for Two Drawer lateral files installed right below a worksurface attached to the panel system when the application is mirrored back-to-back (a two-pack minimum).

TS Series underworksurface lateral files are only intended for use under a panel-mounted worksurface and cannot be used as freestanding.

2. Counterweights are not required for One-High and 1.5-High lateral files and cabinets used with an intermediate support, when the application is mirrored back-to-back (a two-pack minimum).

Note: This includes storage either perpendicular or parallel to the panel.

3. Counterweights are not required for One-High, 1.5-High, and Two Drawer lateral files and cabinets used with a storage-to-panel bracket to support the panel run if the application is mirrored back-to-back (a two-pack minimum) and the panel run is equal to or greater than 6'.

4. Counterweights are not required for towers used with a storage-to-panel connector to support the panel run, if the application is mirrored back-to-back (a two-pack minimum) and the panel is equal to or greater than 5'.

Counterweight Requirements for Storage Products, continued

Requirements for c:scape Tethered Applications

c:scape stability guidelines must be met prior to determining counterweight requirements.

▶ See *c:scape Stability Guidelines* in the *c:scape Specification Guide*.

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

1. Counterweights are not required for a 1- and 1½-High lateral files and low storage 48"W or smaller tethered to a c:scape beam when the beam width is 6' or larger.

3. Counterweights are not required for 1- and 1½-High lateral files or low storage tethered to a c:scape beam when the storage is the same size and mirrored back-to-back on both sides of the beam.

2. Counterweights are not required for 1- and 1½-High lateral files and low storage tethered to a c:scape beam when the beam has mid storage mounted parallel and the beam length is equal to or greater than the combined low storage width.

Requirements for Answer Freestanding Desk Applications

Answer Freestanding Desk guidelines must be met prior to determining counterweight requirements.
 ▶ See *Answer Freestanding Desk Stability Guidelines* in the *Answer Freestanding Specification Guide*.

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

1. A counterweight is not required for a single Two Drawer lateral file attached to desks connected in an L-configuration.

2. A counterweight is not required for a single Two Drawer lateral file attached to a desk made with corner, extended corner, or 120 degree corner worksurfaces.

L-configurations with two or more lateral files **require** counterweights in each file.

Configurations with two or more lateral files **require** counterweights in each file.

Counterweights are **required** for all lateral files in stand-alone desk or credenza applications.

Hutch kit applications with lateral files always **require** counterweights in the lateral files.

Counterweight Requirements for Storage Products, continued

Requirements for Pedestals in Freestanding Applications

Counterweights are required for all freestanding applications.

1. Universal fixed pedestals converted to freestanding pedestals require a counterweight and drawer interlock system.

Universal fixed to freestanding pedestal conversion kit includes 1/8"H steel top, counterweight package, and drawer interlock system.

Fixed pedestals, converted to freestanding with a laminate or veneer top, require a counterweight and drawer interlock system. Drawer interlock system is available from service parts.

TS Series fixed pedestals are only intended for use under a panel-mounted worksurface and cannot be converted to freestanding.

Laminate fixed pedestals can never be freestanding.

2. Mobile pedestals include counterweight and drawer interlock system as standard.

Requirements for Pedestals in Panel Applications

Panel stability guidelines must be met prior to determining counterweight requirements.

▶ See *Panel Stability Guidelines* in the appropriate panel specification guide.

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

Counterweights are not required for fixed pedestals installed below a worksurface attached in a panel spine application. Single workstation applications **require** a counterweight in each pedestal.

Requirements for Pedestals in Answer Freestanding Desk Applications

Answer Freestanding Desk guidelines must be met prior to determining counterweight requirements.
 ▶ See *Answer Freestanding Desk Stability Guidelines* in the *Answer Freestanding Specification Guide*.

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

1. Single pedestal desks less than 48"W require a counterweight and an interlock. Single pedestal desks with 30"D pedestals require a counterweight and interlock.

Tip: Interlock is available as a service part for Universal pedestals, 1043575SR for box/box/file and file/file configurations.

2. Double pedestal desks 60"W and wider only require one pedestal with counterweight.

Less than 60"W

All other desk applications with multiple pedestals **require** a counterweight for each pedestal.

3. Counterweights are not required for a single fixed pedestal in desk with hutch kit applications. Any additional pedestals within the application **require** counterweights.

Requirements for Pedestals in Answer Freestanding Desk Applications, continued

4. A counterweight is not required for a single fixed pedestal attached to a desk attached to another worksurface in an L-configuration. Any additional pedestals within the application require counterweights.

5. A counterweight is not required for a single fixed pedestal attached to desks made with corner, extended corner, or 120 degree corner worksurfaces. Any additional pedestals within the application require counterweights.

Universal Pedestals

27"H fixed pedestals

are floor-standing and can support worksurfaces at 28½"H.

- ▶ Specifying, page 620
- ▶ Specifying *Storage Accessories*, page 679

Top is open and accommodates attachment to a worksurface. Attachment hardware is included.

Lock is standard on pedestals and secures all drawers. Lock is located in the top drawer. Locks are standard factory-installed, keyed random.

- ▶ *Lock and Keying*, page 708

Leveling glides adjust to install pedestals on uneven floors. 25½"H pedestals have a 7⁄8" adjustable glide range, and 27"H pedestals have a 17⁄8" adjustable glide range.

Mobile pedestals fit under a worksurface and can be moved wherever storage is needed. They provide an auxiliary work-surface when you need more space to spread out your work.

- ▶ Specifying, page 624
- ▶ Specifying *Storage Accessories*, page 679

Finished back and sides are standard.

Four casters are hard composition and non-locking, with a full-rotation swivel mechanism. Casters are exposed at the base of box/file pedestals and concealed with the base of box/box/file and file/file pedestals.

Drawer fronts are available in steel, laminate, or wood veneer. Mobile pedestals maintain drawer pull and drawer front alignment with other storage components that have a 3" base.

Pull on proud-front pedestal is available in a variety of shapes.

3"H base is integral to 27"H pedestal case.

Pull on flush-front pedestal is full width and integral. This pull is available on steel drawer fronts only. Full-width wood pull is available as an option. Wood pull, if selected, ships separately from pedestal and is field installed, attaching to the integral pull with double-sided tape.

Drawers open their full depth for total access to the contents. Box and file drawers are available.

Top on mobile pedestal is 1⁄8"H steel. Additional top options are available.

Mobile pedestal cushion top provides a temporary seat ideal for informal gatherings. Optional handle can be extended to easily transport mobile pedestal. Available factory- or field-installed.

- ▶ Specifying, page 648

Product Details

Box drawers are a welded steel construction and available with proud or flush fronts. One divider is included with each box drawer.

File drawers are a welded steel construction and available with proud or flush fronts. Drawer body sides are full height and accommodate front-to-back filing of hanging letter-size file folders.

Optional rails accommodate side-to-side filing of letter-, A4-, and legal-size hanging folders.
Exception: Legal-size file folders cannot be filed in 17½"D or 18¾"D pedestals.

Drawer fronts can be removed and changed in the field to create a different aesthetic or to replace damaged drawer fronts.

Actual Dimensions

	Fixed	Box/File	Box/Box/File and File/File
Depth with flush steel front	17½", 22⁵⁄₈", and 28⁵⁄₈"	17½" and 22⁵⁄₈"	17½" and 22⁵⁄₈"
Depth with proud steel, laminate, or wood front	18¾", 23½", and 29½"	18¾" and 23½"	18¾" and 23½"
Width	15"	15"	15"
Height	25½" and 27"	N.A.	N.A.
Overall height with 1⁄8"H top	N.A.	21"	27"

Pencil tray to hold small office supplies is included with each box/box/file pedestal.

Optional basic drawer interior allows box/box/file pedestals to be ordered without rails, box drawer dividers, or pencil trays.

Proud-front pulls are available in the following styles—contemporary, handle, jazz, and bar. Each pull is 128 mm and available on steel or wood veneer drawers. c:scape pulls (200 mm) are available on steel drawers only.

Label holders are available through Service Parts. Label holder fits inside the integral pull of flush-front drawers and over the top edge of drawer front on proud-front drawers.

Safety interlock system allows only one drawer to be opened at a time for added stability.

Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

▶ *Lock and Keying*, page 708

Individual drawer locks are available on file/file pedestals for applications where you want to limit access to each drawer. Pedestals include a security shield above each drawer to prevent unauthorized access. Individual locking drawers are only available with field-installed lock cylinders. Consecutive, specific, and random keying options are available. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

▶ *Lock and Keying*, page 708

Non-locking pedestal is available as an option.

27"H fixed pedestals have base alignment with other Universal Storage components that have a 3"H base.

Steel, laminate, and wood veneer tops are available in place of standard 1/8"H steel tops. 1"H steel tops, 1 3/16"H laminate with square edge profile, 1 7/16"H laminate with bullnose edge profile on the front edge, and 1 3/16"H wood veneer with square edge profile.

Handle of mobile pedestal cushion top is retractable. In the stowed position, handle is flush with mobile pedestal front. In the travel position, handle is completely extended and articulates upward for longer distance transport. Cushion top is also available without a handle.

Mobile pedestal cushion top for field-installation can be used with mobile pedestals RPM2421CP, RPM2421CF, and RPM2421CW only.

Basic cushion is ordered separately for use on Universal mobile pedestals with metal, laminate, or veneer top. Basic cushion is field-installed and attaches to the existing top with hook and loop fastener.

Basic cushion for field installation can be used with Universal mobile pedestals RPM1821CF, RPM1821CP, RPM1821CW, RPM2421CF, RPM2421CP, and RPM2421CW only.

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

Connections

Fixed pedestals are intended to attach under a worksurface for security and support. Three pedestal depths are available to correspond with Universal Worksurface depths. Proud-front pedestals exactly match the depth of Universal Worksurfaces. Flush-front pedestals are 7/8" shorter.

Filler conceals the gap that may exist between the face of a panel and the back of a 27"H pedestal. Fillers are also used to provide stability for pedestal and worksurface configurations that are not panel-wrapped.

Tip: Fillers for proud front pedestals conceal a 1/2" gap. Fillers for flush front pedestals conceal a 1 3/8" gap.

Freestanding applications that don't require attachment to a worksurface should be used with a conversion kit that includes a steel top, counterweight package, and components to convert the locking system to a safety interlock system.

▶ Page 623

Field-installed accessories are available, including pencil trays, stationary trays, dividers, and rails.

▶ Page 679

Wiring & Cabling

Fixed pedestals do not accommodate cable-routing. Plan accordingly when installing pedestals underneath worksurfaces with grommets or other cable-routing accessories.

Shipping

Fixed pedestals are normally shipped in heavy-duty, recyclable stretch wrap to reduce the amount of corrugated board needed.

Mobile pedestals are shipped in corrugated board to minimize damage during transport.

Universal Sliding Door Bins

For Use with Answer

Universal sliding door bins attach to panels with an on-module bracket and provide overhead storage in the work space. Door is available in steel or wood.
 ▶ Specifying, page 628

Safety catch locks overhead storage unit to frame to prevent accidental removal.

On-module attachment brackets are used to mount bins on panels of the same width as bins and are included with the bin as a standard component.

Steel, laminate, and wood front doors glide smoothly from one side of the case to the other.

Bin ships assembled.

Metal backstop prevents notebooks and equipment from damaging panel surface.

Lock is standard on bins to secure the door. The door can be locked in the closed position on either the right- or left-hand side of the bin. Lock is located underneath the center of the shelf. Lock is standard factory-installed, keyed random. A no-lock option is available.
 ▶ *Lock and Keying*, page 708

Recess beneath unit can accommodate a shelf light.
 ▶ For lighting, see *Answer Freestanding Specification Guide*.

Product Details

On-module attachment brackets are independent of the storage bin and unique to the panel system they are used on. If the storage bin needs to be attached to a different panel in the future, additional on-module attachment brackets can be purchased through Service Parts.

Vertical off-module brackets, optional, can be used to mount one or two sides of an overhead bin off-module on Answer, Kick, Series 9000, Avenir, and Montage with vertical slot patterned panels. To mount an overhead bin with one side off-module, specify with one vertical off-module bracket. To mount an overhead bin with two sides off-module, specify with two vertical off-module brackets. Both of these brackets attach to the on-module bracket that comes standard with the overhead bin.

Vertical off-module brackets are used with bins up to 12" wider than the panel, allowing them to overhang the panel seam.

Actual Dimensions

Depth	15 ³ / ₄ "
Width	36", 42", 48", 60", 66", and 72"
Height	16 ¹ / ₄ "

Upmount brackets, optional, are for use on Answer, Kick, Series 9000, Avenir, and Montage. Brackets enable overhead storage to be used on lower panel heights. Bins using an upmount bracket must be installed on a panel of the same width.

Two upmount bin brackets can be hung side-by-side in an in-line, T-, or X- application. Bin can be upmounted on slatwall skin as long as there is not another bin or another slatwall skin on the adjacent in-line panel.

Omit brackets option must be specified when bin is being used in hutch kit or Series 9000 service module application, or when attaching bin to a horizontal wall attachment bracket. Order hutch kit or Series 9000 service module package separately.

Lock in bin is concealed from view beneath the shelf. Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

► *Lock and Keying*, page 708

Shelf lights are available for use beneath bins. Lights recess into the bottom of the overhead storage unit.

► For lighting, see *Answer Freestanding Specification Guide*.

Dividers are available as an option for use on bins. Dividers ship in a package of four.

Back of storage bin is open to allow panel surface to show. Metal backstop prevents contents of bin from damaging panel surface.

Overhead storage bin height accepts standard and A4 binders.

When mounting on Answer or Kick panels, top of bin cannot be loaded.

Connections

Steel support hooks on end supports insert into the slotted channel of a panel or wall channel and lock into place with a safety catch.

Width of overhead bin must match the width of the panel or panels that it is attached to when using an on-module bracket. Bin may span up to two frames.

38"H

Universal sliding door bin may be mounted at 38"H or lower if another panel-mounted component prevents it from being seated upon.

Horizontal wall attachment brackets are available to attach storage bins to wall of building. Specify as separate style number.
Tip: Select the omit brackets option when ordering the bin.

Wiring & Cabling

Vertical wire managers are available to conceal cords that are routed from light mounted beneath overhead storage.

► For lighting, see *Answer Freestanding Specification Guide*.

Surface Materials

Overhead bin

- Paint
- Wood door (optional)

Locks

Guidelines for Answer Panel-Hung Components

▶ Page 143

Guidelines for Stackable Components

TS Series bins, Universal bins, and shelves can hang from the first stacked tier only.

Universal Over The Case and In The Case Bins

For Use with Answer

Universal over the case bins can be attached to panels with an on-module bracket and provide overhead storage in the work space.

► Specifying, page 630

Safety catch locks overhead storage unit to frame to prevent accidental removal.

On-module attachment brackets are used to mount bins on panels of the same width as bins and are included with the bin as a standard component.

Backstop prevents notebooks and equipment from damaging the surface of the panels or walls.

Bin is steel and ships assembled.

Universal in the case bins, attach to panels with an on-module bracket and provide overhead storage in the work space. Door is available in steel, laminate, or wood.

► Specifying, page 632

Flat-front and radius-front lift-up doors open and close quietly. When up, the doors rest on top of the case to provide more storage space inside.

Locks are standard on bins to secure the door(s). Lock is located underneath the center of the shelf. Locks are standard factory-installed, keyed random. Two-door units are keyed alike. A no-lock option is available.

► *Lock and Keying*, page 708

Recess beneath unit can accommodate a shelf light.

► For lighting, see *Answer Freestanding Specification Guide*.

Flat-front lift-up doors (steel, laminate, or wood) recess into the overhead storage bin.

Product Details

On-module attachment brackets are independent of the storage bins and unique to the panel system they are used on. The following style number suffixes indicate the panels they attach to:

TAK = Answer and Kick
S9 = Series 9000

AVR = Avenir

MON = Montage

If the storage bin needs to be attached to a different panel in the future, additional on-module attachment brackets can be purchased through Service Parts.

Vertical off-module brackets, optional, can be used to mount one or two sides of an overhead bin off-module on Answer, Kick, Series 9000, Avenir, and Montage with vertical slot patterned panels. To mount an overhead bin with one side off-module, specify with one vertical off-module bracket. To mount an overhead bin with two sides off-module, specify with two vertical off-module brackets. Both of these brackets attach to the on-module bracket that comes standard with the overhead bin.

Vertical off-module brackets are used with bins up to 12" wider than the panel, allowing them to overhang the panel seam.

Actual Dimensions

Depth 15³/₄"

Width 24", 30", 36", 42", 48", 60", 66", and 72"

Height 16¹/₄"

Upmount brackets are optional for use on Answer, Kick, Series 9000, Avenir, and Montage. Brackets attach the bin near the top of 54"H panel to enable overhead storage to be used on lower panel heights. Bins using an upmount bracket must be installed on a panel of the same width.

Two upmount bin brackets can be hung side by side in an in-line, T-, or X-application. Bin can be upmounted on slatwall skin as long as there is not another bin or another slatwall skin on the adjacent in-line panel.

Omit brackets option must be specified when bin is being used in hutch kit or Series 9000 service module application, or when attaching bin to a horizontal wall attachment bracket. Order hutch kit or Series 9000 service module package separately.

Picture frame door, optional, is available on Universal over the case and in the case bins with flat steel fronts only, and is an aluminum door frame with acrylic or glass inserts. An omit insert option is also available which allows custom material to be field installed in the aluminum door frame.

The acrylic door insert is a white acrylic. A door assist mechanism is not available as an option on a bin with an acrylic door insert due to the light weight door.

The glass door insert is tempered translucent glass. If a glass door insert option is specified and a door assist mechanism is also required, an assist mechanism must be specified as a separate option to the storage bin. Due to the weight of the glass door insert, it is recommended to specify the optional door assist mechanism.

The omit insert custom material must be ordered from a material vendor. If an omit insert option is specified and a door assist mechanism is also required, an assist mechanism must be specified as a separate option to the storage bin. The weight of a custom insert on a Universal over the case bin can not exceed 10½ pounds. An insert for a Universal over the case storage bin door with an assist mechanism must weigh within the range of 7¼ pounds to 10½ pounds or the assist mechanism will not function correctly. Custom materials being installed in a door insert must comply with local building codes. Consult with local authorities to determine compliance requirements. The use of safety glass is required if installing custom glass in a door insert. To install customer provided material in a picture frame door with the insert omitted, make sure the material is cut precisely to the sizes listed on the dimensions matrix.

► See *Dimensions for Custom Field-Installed Picture Frame Door Inserts*, page 313

Door assist mechanism, optional, consist of a gas cylinder and spring that provides an assisted open and close of the door. When opening the door, the spring pulls the door to the fully recessed position. When closing the door, the assist mechanism will slowly close the door. Universal bins ship with two assist mechanisms per door when specified.

Lock in bin is concealed from view beneath the shelf. Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Two-door units are keyed alike. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

► *Lock and Keying*, page 708

Shelf lights are available for use beneath bins. Lights recess into the bottom of overhead bins.

► For lighting, see *Answer Freestanding Specification Guide*.

Divider is available as an option on overhead bins. Dividers ship in a package of four.

► Page 316

Back of storage bin is open to allow panel surface to show. Metal backstop prevents contents of bin from damaging panel surface.

Overhead storage bin height accepts standard and A4 binders.

When mounting on Answer or Kick panels, top of bin cannot be loaded.

Connections

Steel support hooks on end supports insert into the slotted channel of a panel or wall channel and lock into place with a safety catch.

Width of overhead bin must match the width of the panel or panels that it is attached to when using an on-module bracket. Bin may span up to two frames.

Universal Over The Case and In The Case Bins for Use with Answer, continued

Universal over the case bin may be mounted at 38"H or lower if another panel-mounted component prevents it from being seated upon.

Horizontal wall attachment brackets are available to attach storage bins to wall of building. Specify as a separate style number.
Tip: Select the omit brackets option when ordering the bin.

Wall channels are available to attach bins to concrete or block walls. Wall channels can be used to attach bins and tackboards to wood, dry wall, or plaster walls if the wall is reinforced.

Wall channel horizontal brace is required with wall channels to support bins that are wider than 48".

Wiring & Cabling

Vertical wire managers are available to conceal cords that are routed from light mounted beneath overhead storage.
 ▶ For lighting, see *Answer Freestanding Specification Guide*.

75"	37½" (per door)	15.933"	36.314"	0.138"

Tip: A custom insert cannot be factory installed. Custom insert must be ordered from a material vendor and will not be handled like a Steelcase Customer's Own Material. In selecting materials for customer supplied inserts, consider material characteristics, such as effects from thermal changes, humidity changes, aging characteristics, and strength of material. Do not use materials that allow the overall size of the custom insert to deviate by amounts larger than the acceptable tolerances listed in the matrix.

Tip: A custom insert cannot be factory installed. Custom insert must be ordered from a material vendor and will not be handled like a Steelcase Customer's Own Material. In selecting materials for customer supplied inserts, consider material characteristics, such as effects from thermal changes, humidity changes, aging characteristics, and strength of material. Do not use materials that allow the overall size of the custom insert to deviate by amounts larger than the acceptable tolerances listed in the matrix.

Universal Shelves and Universal Personal Shelves

For Use with Answer

Universal shelves—supported by Answer, Kick, Series 9000, Avenir, and Montage—provide overhead storage in the work space.
 ▶ Specifying, page 635

Universal personal shelves provide a wall-supported surface that attaches to Answer, Kick, Series 9000, and Avenir.
 ▶ Specifying, page 636

Metal backstop on Universal shelves

prevents notebooks and equipment from damaging panel surface. Universal personal shelves do not have a backstop.

On-module attachment hooks are integral to the end supports and are used to mount shelves on panels of the same width as bins.

Safety catch locks shelf units to frame to prevent accidental removal.

Shelves are steel and ship ready to assemble.

Product Details

Shelf lights are available for use beneath shelves. Lights recess into the bottom of the overhead storage unit.
 ▶ For lighting, see *Answer Freestanding Specification Guide*.

Dividers are available field installed for use on Universal shelves. Dividers ship in a package of four. Dividers cannot attach to Universal personal shelves.

A 1 1/2" gap exists between the personal shelf and the panel to allow for cable routing.

The height dimension of the bracket (from top of personal shelf to the bottom of the bracket) is 6 1/2" H.

Actual Dimensions

	Universal shelves	Universal personal shelves
Depth	14 ³ / ₄ "	13 ¹¹ / ₁₆ "
Width	24", 30", 36", 42", 48", 60", and 72"	24", 30", 36", 42", and 48"
Height	7 ¹ / ₂ " (Kick, Answer, Series 9000, and Avenir)	1 ¹¹ / ₁₆ " (thickness of shelf)

Connections

Steel support hooks on end supports insert into the slotted channel of a panel or wall channel and lock into place with a safety catch.

Universal shelf may be mounted at 38"H or lower if another panel-mounted component prevents it from being seated upon.

On-module attachment hooks cannot be attached to upmount brackets.

Width of shelf must match the width of the panel or panels that it is attached to with the on-module brackets. Shelves may span up to two frames.

Wiring & Cabling

Vertical wire managers conceal cords and cables that are routed vertically outside of the panels.
▶ For lighting, see *Answer Freestanding Specification Guide*.

Height	4½"

Slim Shelves

Slim shelves provide a panel-supported surface that attaches to Answer, Kick, Series 9000, Avenir, and Montage with panel-specific brackets.

► Specifying, page 641

Slim shelf is an extruded aluminum shelf that provides storage for small items.

Product Details

Slim shelves attach to Answer, Kick, Series 9000, Avenir, and Montage with panel-specific brackets.

Gap at back of slim shelf allows routing of shelf light cord.

Slim shelves can be mounted off-module. No more than 12" overhang on either side of panel is recommended. Brackets attach on vertical seams of panel, while the shelf adjusts off-module on the brackets.

Two attachment brackets are included with shelves less than or equal to 48"W. Two attachment brackets and a mid-span support are included with shelves wider than 48"W.

Answer will not support two shelves installed end to end.

Bracket Application Rules for Bins and Shelves

For TS Series Bins, Universal Sliding Door Bins, Universal Over the Case Bins, Universal In the Case Bins, and Universal Shelves

Bracket Application Matrix

Panels	TS Series Bins, Universal Bins, and Universal Shelves—On-Module	Universal Bins—Single Side Vertical Off-Module	Universal Bins—Two Sided Vertical Off-Module	Universal Bins—Horizontal Off-Module (for use with and Montage only)	Universal Bins—Upmount
Answer	•	•	•		•
Kick	•	•	•		•
Series 9000	•	•	•		•
Avenir	•	•	•		•
Montage	•	•	•	•	•

On-Module Brackets and Hooks

On-module brackets and hooks are used to mount overhead bins and Universal shelves to panels with vertical slot patterns. Answer, Kick, Series 9000, Avenir, and Montage panels can support on-module attachment brackets.

Universal personal shelves can attach on-module to all panels except Montage.

Width of overhead storage unit must match the width of the panel or panels that it is attached to. Storage bins or shelves may span up to two panels.

Additional support for stability may be required when shelves and overhead storage bins are attached to panels. Counterbalancing loads on the opposite sides of the panels increases stability. *Tip: See Stability Guidelines in each corresponding specification guide.*

On-module attachment brackets install in panel seams.

On-module brackets can be used above and adjacent to slatwall on Answer and Montage Panels.

On-module brackets can be used with a panel stacker on Answer, Kick, and Montage panels. Follow standard panel stacker guidelines for each panel.

Off-module brackets are used with bins up to 12" larger than the panel, allowing them to overhang the panel seam.

Off-Module Brackets

Vertical off-module brackets, optional, can be used to mount one or two sides of the overhead bin off-module on Answer, Kick, Series 9000, Avenir, and Montage with vertical-slot-patterned panels. Both of these brackets attach to the on-module bracket that comes standard with the overhead bin. Vertical off-module brackets allow bins to be installed a maximum of 12" off-module. Vertical off-module brackets can be used with 30"W to 60"W Montage bins only.

Vertical off-module brackets can be used above and adjacent to slatwall on Answer and Montage panels.

Vertical off-module brackets can be used with a panel stacker on Answer, Kick, and Montage panels. Follow standard panel stacker guidelines for each panel.

Horizontal off-module brackets, optional, accommodate off-module installations of overhead storage bins on panels with horizontal slot patterns. Enhanced off-module Montage frames can support horizontal off-module brackets. Horizontal off-module brackets can be used with 24"W to 48"W Montage bins only.

Horizontal off-module brackets can be used above and adjacent to slatwall on Montage panels.

Horizontal off-module brackets can be used above and adjacent to slatwall on Answer and Montage panels. Follow standard panel stacker guidelines for each panel.

Enhanced off-module Montage frames have horizontal slot patterns and must be specified for horizontal off-module Montage configurations.

Horizontal off-module brackets push bin out from panel 5/8" on enhanced off-module Montage panels.

Horizontal off-module brackets cannot span a vertical or joint where two frames come together on enhanced off-module Montage panels. Shift the bin to avoid the joint.

Only two pairs of off-module brackets and associated storage can be mounted per frame.

Upmount brackets, optional, can be used with Universal sliding door, Universal over the case, and Universal in the case bins. Brackets attach bins near the top of 54"H panels. TS Series bins and Universal shelves cannot be attached to upmount brackets.

Upmount bin width must match the width of the panel or panels that it attaches to. Upmounted bins and shelves cannot be supported off-module.

Upmount brackets can be used with a panel stacker on Answer, Kick, and Montage panels. Follow standard panel stacker guidelines for each panel.

Omit Brackets

Omit brackets option must be specified when bin is used in hutch kit or Series 9000 service module application, or when attaching bin to a horizontal wall attachment bracket. Order hutch kit or Series 9000 service module package separately. Hutch kit supports bin at 66" height. Service module package supports bin at 65" height on Series 9000.

Application Rules for Overhead Storage on Answer and Kick Panels

Tip: For complete panel specific stability guidelines, see the corresponding panel specification guide.

Answer Panel

Guidelines for Universal Bins. Applies to universal sliding door bin or universal in the case bin on Answer and Kick panels.

The following application restrictions must be complied with when hanging universal overhead bins on Answer and Kick panels. Otherwise, standard Answer and Kick application guidelines apply.

- If bins or shelves are applied at an elevation higher than 66", a perpendicular panel of same height (or up to 24" lesser height) is required.
- The maximum panel run length when using a universal overhead bin on Answer or Kick panels is 12'.
- Top of bins and shelves are not designed to support the weight of a seated person. Bins and shelves may be mounted at 38"H or lower only if another panel-mounted component prevents it from being seated upon.
- When ganging binder bins, the use of a tie plate is required.

WARNING

Failure to comply to these guidelines may result in personal injury.

Kick Panel

Universal One-High, 1.5-High, and Two Drawer Lateral Files

One-High and Two Drawer lateral files serve a dual purpose as high-density storage and as an inviting space for guests.
▶ Specifying, page 642

1.5-high lateral files provide multi-zone storage for binders, hanging folders, and piling surfaces at a height which allows for comfortable guest seating in collaborative environments.
▶ Specifying, page 642

Label holders are included with each drawer. Label holder fits inside the integral pull or can be affixed to the front of the drawer or door. Perforated labels are included and can be created using the template available on www.steelcase.com/label.

Finished back is standard.

Three base options are available: the universal 3" base, FrameOne foot, and c:scape glide. All three bases have the same overall height.

Lock is standard on lateral files and is located at top left corner of drawer. Locks are standard factory-installed, keyed random.
▶ Lock and Keying, page 708

Pulls on flush-front lateral files are full width and integral.

Pulls on proud-front lateral files are available in a variety of shapes.

Top is standard 1"H steel on units with steel fronts and standard 1³/₁₆"H wood veneer on units with wood fronts. Other top options are available.

Drawer fronts are available in steel, laminate, or wood veneer.

Leveling glides adjust up to 3/4" for universal 3" base and up to 1" for c:scape glide and FrameOne foot base to install lateral file on uneven floors.

Drawers are standard 12"H and open full depth for total access to the contents.

Actual Dimensions

Depth with flush steel or open front 18" and 23¹/₈"

Depth with proud steel, laminate, or wood front 18⁷/₈" and 24"

Width 30", 36", and 42"

Height 16", 22", and 28"

Product Details

Base options

Universal 3" Base

c:scape Glide Base

FrameOne Foot Base

Tip: All base options have same overall height.

Tip: Power infeed sits proud of the panel approximately 3" and will interfere with Universal storage with the Universal 3" base, FrameOne foot base, or c:scape glide.

Flush-front pull is full width and integral with the drawer. Pull is available on steel drawers only.

Contemporary pull

Handle pull

Jazz pull

Bar pull

c:scape pull

Proud-front pulls are available in the following styles—contemporary, handle, jazz, and bar. Each pull is 192 mm and available on steel or wood veneer drawers. c:scape pulls (200 mm) are available on steel only.

Drawer interiors include one hanging folder bar per drawer in each 18"D case and two rails per drawer in each 24"D case. Alternative interiors are available as options.

Hanging folder bar accommodates side-to-side filing of letter-, A4 international-, and legal-size hanging folders. Additional bars are available and must be specified separately. ▶ Page 680

Rails accommodate front-to-back filing of letter-, A4 international-, and legal-size hanging folders. Rail packages accommodate two rows of letter-size files in 30"W and 36"W drawers and three rows of letter-size files in 42"W drawers. See *Storage Capacities* for additional details. Additional rails are available and must be specified separately.

▶ For interior dimensions, see *Storage Capacities and Dimensions* in the *Storage Specification Guide*.

Dividers accommodate side-to-side filing of expandable folders and other objects. Divider packages include three dividers per drawer, 12"H file drawers also include one hanging folder bar per drawer. Additional dividers are available and must be specified separately.

▶ Page 681

Safety interlock system allows only one drawer to be opened at a time.

Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

▶ *Lock and Keying*, page 708

Individual drawer locks

are available as an option for an application that would limit access to each drawer. Lateral files include a security shield between drawers to prevent unauthorized access. Individual locking drawers are only available with field-installed locks. Consecutive, specific, and random keying are available. Field-installed lock cylinders must be specified separately.

▶ *Lock and Keying*, page 708

No-top lateral files are available for use with cushion top or beneath a common top shared among several lateral files. Hardware is included to attach case to worksurface. No-top option reduces height of file by 1".

FrameOne top 3/4"H

Steel top 1"H

Veneer top 1 3/16"H

Laminate top 1 3/16"H

Laminate and wood veneer tops with square-edge profiles are available in place of standard 1"H steel tops. Laminate and wood veneer tops are 3/16" taller than steel tops and will add that dimension to the overall height of the lateral file.

FrameOne top matches the height of a FrameOne bench. A 3/4"H wood or laminate top floats above a painted steel security top using six black plastic spacers. FrameOne top can be specified on 28"H files only, making the overall height 28 1/2"H.

Universal One-High, 1.5-High, and Two Drawer Lateral Files, continued

Security top is available as an option for installations where the file will be installed beneath a worksurface, but not physically attached. Thin steel top prevents unauthorized access to the contents of the cabinet. Security top is not structural and can be specified on 28"H files only. Security top reduces overall height of file to approximately 27"H.

Ganging hardware is included to provide alignment by joining adjacent components side-by-side, back-to-back, or both.

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

Connections

Intermediate support is used with Universal One-High or 1.5-High storage as a worksurface support allowing for nesting of low storage.

c:scape beam tether bracket connects 1- and 1½-high storage to provide added stability to the c:scape beam.

Cushion top is ordered separately for use on One-High, 1.5-High, and Two Drawer lateral files without top.

Basic cushion is ordered separately for use on Universal One-High, 1.5-High, and Two Drawer lateral files with metal, laminate, or veneer top. Basic cushion is field-installed and attaches to the existing top with hook and loop fastener.

Tip: Basic cushion is available on Universal lateral files with a top only.

When applying the basic cushion on 30"W or 36"W Universal laterals with an open configuration, a support brace must also be specified.

Storage to panel bracket connects One-High, 1.5-High, 2-High, 3-High laterals and cabinets to panel to provide added stability to panels and eliminate the need for return panels.

▶ See page 673

Wood veneer with square edge profile Laminate with square edge profile

Field-installed tops are available in two choices—wood veneer with square edge profile or laminate with square edge profile. Tops can be used on an individual lateral file, or larger tops can be used to connect files to make a credenza.

▶ Page 676

Field-installed accessories are available, including drawer accessories and counterweight packages.

▶ Page 679

Floor anchor bracket (for TS Series Storage, TS 200 Series Storage, 900 Series Storage, and Universal Storage with 3" base)

secures lateral files, towers, workstation verticals, cabinets, or bookcases to the floor for stability or to reduce the risk of hazards during earthquakes in seismic zones. Four bracket packages are required for each cabinet.

Note: Local seismic requirements vary.

Compliance with local code requirements is the responsibility of the customer or their authorized agent.

For a California Office of Statewide Health Planning and Development (OSHPD) approved anchor bracket, contact Steelcase Specials. Tip: Anchor bracket cannot be used with pedestals.

▶ Page 684

Overfile cabinets are separate components that are field installed on top of lateral files, combination cabinets, storage cabinets, and wardrobe cabinets to provide space for additional files, ring binders, or miscellaneous storage.

Counterweight Requirements for Storage Products

▶ Pages 289–296

Shipping

Lateral files are normally shipped in heavy-duty, recyclable stretch wrap to reduce the amount of corrugated board needed.

Counterweight packages ship separately from case and must be field-installed.

Universal Towers and Workstation Verticals

Towers provide storage of a variety of work and personal items for an individual, including paper, binders, books, and coats.

► Specifying, page 650

Finished back is standard.

Interior of tower is available in a variety of configurations combining coat storage, fixed and adjustable shelves, and file drawers.

Pull on flush-front tower is integral and full height on doors and full width on drawers.

Locks are standard on door and drawers. Locks are standard factory-installed, keyed random. Door and drawer locks are keyed alike.

► *Lock and Keying*, page 708

Three base options are available: the universal 3" base, FrameOne foot, and c:scape glide. All three bases have the same overall height. All other universal towers are available with the universal 3" base only.

Leveling glides adjust up to 3/4" for universal 3" base and up to 1" for c:scape glide and FrameOne foot base to install tower on uneven floors.

Drawers open their full depth for total access to the contents.

Top is standard 1"H steel. Other top options are available.

Door is available in steel, laminate, or wood veneer. Hinges are European-style and allow doors to open to 110° for full access to the interior. Door is available hinged on left or right.

Locker space is 9" wide and standard with a coat rod.

Pull on proud-front tower is available in a variety of shapes.

Drawer fronts are available in steel, laminate, or wood veneer.

Product Details

Base options

Universal 3" Base

c:scape Glide Base

FrameOne Foot Base

All base options have same overall height. FrameOne foot base and c:scape glide base are only available on 18"D and 24"D openside towers.

Tip: Power infeed sits proud of the panel approximately 3" and will interfere with Universal storage with the Universal 3" base, FrameOne foot base, or c:scape glide.

Actual Dimensions

Depth with flush steel front	18", 23 1/8", and 29 1/8"
Depth with proud steel, laminate, or wood front	18 7/8", 24", and 30"
Width	24"
Height	47 1/2", 52", and 65 1/2"

Interior of tower combines coat storage, box and file drawers, fixed and adjustable shelves.

Door on full front towers is full height and can be hinged on the left or right. Coat storage space is always located on the same side as the door hinge.

Flush-front pull is integral and full height on the door and full width on the drawers. Pull is available on steel doors and drawers only.

Proud-front pulls are available in the following styles—contemporary, handle, jazz, and bar. Door pull is 192 mm and drawer pulls are 128 mm. Proud-front pulls are available on steel, laminate, or wood veneer doors and drawers. c:scape pulls (200mm) are available on steel only.

Lift-up door is standard on 65½"H vertical drawer towers and workstation verticals, and includes a fixed shelf. Flush-front door recedes into the case and proud-front door lifts above case.

Adjustable shelves on 52"H and 65½"H open side towers are recessed from the front and side of the tower. Shelves adjust in 2½" vertical increments. Opening on 47½"H tower is 13½"H and does not come with an adjustable shelf.

Frosted glass adjustable shelves are available as an option on open side towers. *Tip: If glass shelves are selected, they will replace all steel shelves in the unit.*

Post on open side towers supports adjustable shelves and is painted to match the case.

Adjustable shelves in dual door and full front towers can be positioned in the interior of the tower in ¾" vertical increments using a reversible bracket. The first shelf above a file drawer is a fixed shelf.

Drawer accessories include one divider and one pencil tray in each box drawer. File drawers can accommodate front-to-back filing of letter-size hanging folders without the use of additional accessories.

Safety interlock system allows only one drawer to be opened at a time.

Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Door and drawer locks are keyed alike. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately. ▶ *Lock and Keying*, page 708

Drawer lock in open side tower is located in the top file drawer.

Drawer lock in dual door tower, full front tower, vertical drawer tower, and workstation vertical tower is located approximately 36" from the floor and also secures the lift-up door on 65½"H units.

Individual drawer locks are available as an option on workstation verticals for applications where you want to limit access to each drawer. Workstation verticals include a security shield above each drawer to prevent unauthorized access. In 65½"H towers, the lift-up door is controlled by the lock in the drawer directly below. Individual locking drawers are only available with field-installed locks. Consecutive, specific, and random keying options are available. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

▶ *Lock and Keying*, page 708
Exception: Individual drawer locks are not available on towers with 6"H drawers.

Laminate and wood veneer tops with square-edge profiles are available in place of standard 1"H steel tops. Laminate and wood veneer tops are 3/16" taller than steel tops and will add that dimension to the overall height of the tower.

Top will default to steel on towers with proud wood fronts since the door overlaps and partially conceals the top. Wood top is available as an option.

Ganging hardware is included to provide alignment by joining adjacent components side-by-side, back-to-back, or both.

Universal Towers and Workstation Verticals, continued

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

Field-installed accessories are available, including drawer accessories and shelf bookends.

▶ Page 679

Floor anchor bracket (for TS Series Storage, TS 200 Series Storage, 900 Series Storage, 800 Series Storage and Universal Storage with 3" base) secures lateral files, towers, workstation verticals, cabinets, or bookcases to the floor for stability or to reduce the risk of hazards during earthquakes in seismic zones. Four bracket packages are required for each cabinet.

Note: Local seismic requirements vary.

Compliance with local code requirements is the responsibility of the customer or their authorized agent. For a California Office of Statewide Health Planning and Development (OSHDP) approved anchor bracket, contact Steelcase Specials. Tip: Anchor bracket cannot be used with pedestals.

Storage-to-Panel Connectors

► Specifying page 673

Tip: For use with universal steel storage only.

Product Details

Low storage-to-panel connector connects One-High laterals and cabinets to panel to provide added stability to panels and eliminate the need for return panels.

Overhead storage or panels over 48"H can not be used in conjunction with low storage-to-panel connector.

Medium storage-to-panel connector connects 1.5-High, 2-High, 3-High laterals and cabinets to panels to provide added stability to panels and eliminate the need for return panels.

Tall storage-to-panel connector connects towers to panels to provide added stability to panels and eliminate the need for return panels. Tall storage-to-panel connector can be used with 48"H, 4-high, and 5-high towers.

Tall storage-to-panel connectors can only be used on 48"H or taller panels.

Note: Medium storage-to-panel connectors can be used on towers connected to panels shorter than 48"H, but must follow application guidelines for medium connectors.

Application Topics

Storage-to-panel connector can be positioned on the back or side of the cabinet. Connector must be located only on the ends of the back or side of the cabinet. It cannot be positioned anywhere else on the case side or back.

Storage-to-panel connectors can only be used with select storage products:
 –Universal lateral files and towers, 900 Series lateral files, or TS 200 Series lateral files manufactured on or after November 2005
 –TS Series Tower Too manufactured on or after January 2009.

Duo Tall and Slim Storage (For Use with Answer Top Cap Mounted Storage)

	Tall Individual	Tall Shared	Slim
54"W	●	●	●
66"W	●	●	●

Duo Tall Storage

Duo tall storage can be used to attach to Answer in-line, L,T, and end-of-run junctions.

Panel stabilizer

Panel bracket connects box into panel junction slots.

Wood core construction with laminate surface

Ledge provides support for office supplies.

Magnets can be used to display items on painted steel divider cover.

Duo tall and slim storage can be used to attach to the top of Answer panels with thin trim. Attachment brackets and trims are sold separately.

Product Details

Two interior configurations of Tall Storage are available. Individual box has a ledge on one side and space for binder storage on the opposite side. Shared box is divided down the center with half ledge and half binder storage on each side.

66"W and 78"W individual boxes have a center divider on the binder storage side for additional support.

Column height at shortest level is 29 7/8"H. Column will then adjust upward 3" for leveling.

Height from floor to top of box is approximately 45".

Actual Dimensions

	Tall Storage	Slim Storage
Box exterior height	15"	7 1/2"

Box interior depth (ledge)	3 1/2"	N.A.
Box interior width	52 3/8", 64 3/8", and 76 3/8"	52 3/8", 64 3/8", and 76 3/8"
Leg height	29 7/8"	N.A.

Connections

Attaches perpendicular (90°) to Answer panel at in-line, end-of-run, L or T junction. Works with 42"H or taller panels only. Attaches on-module only.

Panel-mounted work-surfaces are required when connecting Duo Tall Storage to Answer panels at an in-line, L, T, or end-of-run junction. Worksurface brackets are included to attach to Duo Tall Storage worksurfaces to improve stability.

In seismic zones 3 and 4, consult with local building code officials for specific code requirements applicable to your installation.

Duo Tall cannot be installed with case in front of slatwall skin.

When mounting Duo Tall or Slim Storage on top of an Answer panel, top cap mounting brackets and additional panel top caps will need to be specified separately.

Box

- Laminate

Interior divider cover

- Paint

Brackets and leg

- 4799 Platinum paint

For right-handed Duo end-of-run configurations, the panel bracket will be visible.

Stability Guidelines

Stability Guidelines for Answer and Duo Tall Storage

Duo Tall Storage cannot be mounted off-module.

A minimum 30\"/>

If Duo Tall Storage is mounted in an end-of-run application, a 30\"/>

Duo Tall Storage cannot be mounted off-module.

A minimum 30\"/>

A 30\"/>

Stability Guidelines for Duo Tall Storage-to-Answer Panel Application in Seismic Zones

- Follow traditional planning guidelines.
- Tall Storage leg base must be bolted to the floor per local building code.
- Worksurface brackets included must be installed.

Stability Guidelines for Answer Panels and Duo Overhead Storage or Duo Slim Storage on Post and Beam Fence

A minimum 18\"W return is required, or a post with large base bolted to the floor.

On a single Post and Beam fence, no more than one Overhead or Slim Storage box can be attached.

Fences with Overhead or Slim Storage spaced no more than 10' apart can stabilize a wall.

A minimum 18\"W return is required, or a post with large base bolted to the floor.

On a single Post and Beam fence, no more than one Overhead or Slim Storage box can be attached.

Fences with Overhead or Slim Storage spaced no more than 8' apart can stabilize a wall with upper storage.

V Change-of-Height Junctions—Thin Trim

- Tip: Junction includes:**
- V change-of-height junction
 - V vertical trim
 - 120° change-of-height trim
 - 120° junction cap
 - Aligner

Tip: Omit trim option omits all vertical and change-of-height trim. This option is used when stacking on base junctions. Vertical and change-of-height trim should be specified separately to span the full height of the base junction plus stacking junction.

Tip: Remember to specify necessary junction caps and aligners if the omit trim option is selected.

Tip: Change-of-height junction ships right-handed. For a left-handed junction, a post will need to be moved during installation.

Utility Pole – L, T, and X—Thin Trim

Utility Pole – L, T,
and X—Thin Trim

Tip: Works with L, T, or X base junctions of any height and T or X change-of-height junctions as long as at least two panels are at the tallest height.

Tip: If your application does not satisfy the above criteria, a square trim junction utility pole may be used.

Note: this will add 3" of dimension to the application.

▶ Page 426

Tip: Cannot be used with L change-of-height junctions.

Tip: Can only be used with junctions manufactured on or after October 10, 2011.

Tip: Does not include junction. Junction is ordered separately.

Tip: Order multipurpose power infeed separately.

Panels—Thin Trim

 **For Canadian Pricing**
Multiply U.S. Price by the Canadian price factor.
▶ See page 1 for details.

Frameless Glass Screens with Recessed Attachment—Thin Trim

Tip: These screens are only to be used on panels with thin trims.

Tip: Remember to specify in-line spanning top cap lightseals if frameless glass screen is spanning two or more panels.

▶ See page 489.

Tip: Wall start application should be specified when using a wall start junction to attach to a wall or to be used in an off-module condition.

Tip: For widths of 72" or smaller, if spanning glass of two or more junctions, additional junction grommets will be needed. Two grommets per spanned junction should be ordered. Order service part package 89050001MP for a package of 20 grommets.

Standard Includes		Required to Specify

Recessed Frameless Glass Top Cap Connector—Thin Trim

Recessed Frameless Glass Top Connector—Thin Trim

Tip: Recessed frameless glass top cap connector needs to be ordered in the following situations:

- when using a wall start junction and putting frameless glass with recessed attachment on the panel directly adjacent to the wall
- when using frameless glass with recessed attachment on an off-module fin panel
- when recessed frameless glass is adjacent to a corner junction and the recessed frameless glass top caps are located at a lower height than the junction cap
- when recessed frameless glass is coming into an in-line change-of-height condition and the recessed frameless glass top caps are located on the lower panel height
- when recessed, frameless glass is adjacent to a utility pole
- when frameless glass or top cap mounted storage is used on a panel that is adjacent to a boundary screen

Standard Includes	Required to Specify

Answer Boundary Screens

Straight, Single-Connect For Use with Thin Trim Panels

Tip: Additional hardware upcharge is applied only when single-connect straight split style number is specified.

Tip: When specifying a boundary screen equal to or taller than an Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option.

Tip: When attaching boundary screen to Answer panel with stacking segment, order a boundary screen, end-of-run junction, omit trim, add a change-of-height trim, and stacking junction.

Tip: When specifying a boundary screen shorter than Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option, and order a change-of-height trim.

Tip: When specifying a split boundary screen, two screen widths will need to be specified.

Tip: Full-fill finish codes can be used to simplify specification of veneer boundary screens being used in settings with full-fill veneer products. The screen will not have the final fill coat applied, but the finish color will be consistent with the full-fill products.

Answer Boundary Screens

Straight, Dual-Connect For Use with Thin Trim Panels

Tip: Additional hardware upcharge is applied only when single-connect straight split style number is specified.

Tip: When specifying a boundary screen equal to or taller than an Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option.

Tip: When attaching boundary screen to Answer panel with stacking segment, order a boundary screen, end-of-run junction, omit trim, add a change-of-height trim, and stacking junction.

Tip: When specifying a boundary screen shorter than Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option, and order a change-of-height trim.

Tip: When specifying a split boundary screen, two screen widths will need to be specified.

Tip: Full-fill finish codes can be used to simplify specification of veneer boundary screens being used in settings with full-fill veneer products. The screen will not have the final fill coat applied, but the finish color will be consistent with the full-fill products.

Answer Boundary Screens

L Return, Single-Connect For Use with Thin Trim Panels

▶ Need help?
Product details,
page 76

Standard Includes

- Primary and return screen: High-Pressure Laminate or wood veneer
- Edge on laminate screen: plastic, if selected
- Height: 30"H–54"H
- Width:
 - Single-sided: 27"W–75"W
 - Split left and right: 25½"W–73½"W
- Connecting panel cover: paint price group 1
- 1½" adjustable glides
- Attachment hardware

Required to Specify

- 1 Style number
 - 2 Screen size type (see below under Required Selections)
 - 3 Screen height(s)
 - 4 Height of connecting panel (see below under Required Selections)
 - 5 Screen width(s)
 - 6 Handedness: on single-sided screens, if selected (see below under Required Selections)
 - 7 High-Pressure Laminate or wood veneer color for screen
 - 8 Plastic color number for edge on laminate screen, if selected
 - 9 Grain direction
 - 10 Paint color number for connecting panel cover
 - 11 Options, if selected (see below)
- ▶ See *Surface Materials*, page 692.

Tip: Additional hardware upcharges are applied only when single-connect single-sided L return, or single-connect split L style numbers are specified.

Tip: When specifying a boundary screen equal to or taller than an Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option.

Tip: When attaching boundary screen to Answer panel with stacking segment, order a boundary screen, end-of-run junction, omit trim, add a change-of-height trim, and stacking junction.

Tip: When specifying a boundary screen shorter than Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option, and order a change-of-height trim.

Tip: When specifying a split L return boundary screen, four screen widths will need to be specified.

Tip: Full-fill finish codes can be used to simplify specification of veneer boundary screens being used in settings with full-fill veneer products. The screen will not have the final fill coat applied, but the finish color will be consistent with the full-fill products.

Answer Boundary Screens

L Return, Dual-Connect For Use with Thin Trim Panels

Standard Includes	Required to Specify
<p>▶ Need help? Product details, page 76</p> <ul style="list-style-type: none"> • Primary and return screen: High-Pressure Laminate or wood veneer • Edge on laminate screen: plastic, if selected • Height: 30"H–54"H • Width: <ul style="list-style-type: none"> – Single-sided: 27"W–75"W – Split left and right: 25½"W–73½"W • Connecting panel cover: paint price group 1 • 1½" adjustable glides • Attachment hardware 	<ol style="list-style-type: none"> 1 Style number 2 Screen size type (see below under Required Selections) 3 Screen height(s) 4 Height of connecting screen (see below under Required Selections) 5 Screen width(s) 6 Handedness: on single-sided screens, if selected (see below under Required Selections) 7 High-Pressure Laminate or wood veneer color for screen 8 Plastic color number for edge on laminate screen, if selected 9 Grain direction 10 Paint color number for connecting panel cover 11 Options, if selected (see below) <p>▶ See <i>Surface Materials</i>, page 692.</p>

Tip: Additional hardware upcharges are applied only when dual-connect single-sided L return, or dual-connect split L return style numbers are specified.

Tip: When specifying a boundary screen equal to or taller than an Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option.

Tip: When attaching boundary screen to Answer panel with stacking segment, order a boundary screen, end-of-run junction, omit trim, add a change-of-height trim, and stacking junction.

Tip: When specifying a boundary screen shorter than Answer panel, order a same height end-of-run junction for height of Answer panel with the omit trim option, and order a change-of-height trim.

Tip: When specifying a split L return boundary screen, four screen widths will need to be specified.

Tip: Full-fill finish codes can be used to simplify specification of veneer boundary screens being used in settings with full-fill veneer products. The screen will not have the final fill coat applied, but the finish color will be consistent with the full-fill products.

Base Horizontal Frame Packages—Square Trim

For Panel Buildups

Tip: You must order vertical junctions separately to complete your frame.

▶ Page 410

Tip: Specify omit top cap when adding a frameless glass screen to a panel or when ordering spanning top caps.

Tip: Remember to specify an optional change-of-height top cap on any panel in a change-of-height configuration.

Exception: The tallest panel in the configuration never needs a change-of-height top cap.

Tip: Remember to omit base trim(s) when using skins to the floor or when using an open base trim conversion kit.

Tip: Base cable tray cannot be used if omit base trim is selected for one or both sides of panel.

Tip: Remember to order skins to complete the panel.
▶ Page 450.

Tip: Omit standard base trim and specify separate hardwire base trim when accessing hardwire power in the base.

Standard Includes		Required to Specify

Panel Packages—Oval Trim

Side 1 Side 2
 Tip: You must order junctions separately to connect adjacent panels.
 ▶ Page 411

Tip: Remember to order receptacles and faceplates.
 ▶ Pages 499 and 501

Tip: 18"W panels can accommodate pass-through power only.

Tip: 72"W panels accommodate fabric in the horizontal application only.

Tip: For further information about fabric direction,
 ▶ Page 697.

Tip: Remember to specify an optional shortened change-of-height top cap on any panel in a change-of-height configuration.
 Exception: The tallest panel in the configuration never needs a shortened change-of-height top cap.

Fabric Covered Panel Skins To The Floor

For Panel Buildups

Tip: Remember to omit base trim(s) on a horizontal frame package when using a skin to the floor.

Tip: 48"H fabric covered panel skins to the floor accommodate select fabrics in the vertical direction only.

Tip: 48"H and 60"H fabric covered panel skins accommodate fabric in the vertical direction only.

Tip: 72"W fabric covered panel skins accommodate fabric in the horizontal direction only.

Tip: For further information about fabric direction, see page 697.

Tip: 30"H and 42"H skins only work on junctions manufactured on or after October 10, 2011.

Tip: When specifying skins, the total skin height will be 6" less than the panel height. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

▶ See Panel Buildups, page 16, for more information.

For Canadian Pricing
Multiply U.S. Price by the Canadian price factor.

▶ See page 1 for details.

Steel Panel Skins

For Panel Buildups

Tip: Steel skins cannot accommodate power receptacles or communication outlets. Use the base or fabric skin for power access.

Tip: Horizontal beam and the back of the opposite skin is visible through a perforated skin.

Tip: 18"H and 30"H skins only work on junctions manufactured on or after October 10, 2011.

Steel To The Floor Skins

For Panel Buildups

Tip: Remember to omit base trim(s) on horizontal frame package when using a skin to the floor.

Tip: Steel skins cannot accommodate power receptacles or communication outlets. Use a fabric skin for power access.

Tip: 30"H skins only work on junctions manufactured on or after October 10, 2011.

Tip: When specifying skins, the total skin height will be 6" less than the panel height. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

Shared Components

Wood To The Floor Skins

Tip: Remember to omit base trim(s) on horizontal frame package when using a skin to the floor.

Tip: 18"H, 30"H, and 42"H skins only work on junctions manufactured on or after October 10, 2011.

Tip: When specifying skins, the total skin height will be 6" less than the panel height. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

Back Painted Glass To The Floor Skins

Tip: When specifying skins, the total skin height will be 6" less than the panel height. Skins to the floor are indicated by an F suffix. Plan 6" shorter than panel height, but skins to the floor are taller in actual height to cover the base trim area.

Tip: Rare earth magnets should be used with magnetic backer.

Tip: Remember to omit base trim(s) on horizontal frame package when using a skin to the floor.

Tip: Back painted glass skins only work on junctions manufactured on or after October 10, 2011.

Standard Includes		Required to Specify

Single-Pane Glass Window Kits for Use with Custom Glass

For Panel Buildups

Tip: Custom glass must be ordered separately.
 ▶ See page 135 for the dimensions of custom inserts.

Tip: Glass window kits are available for single pane only.

Tip: Remember to specify spanning window in-line supports if window is spanning two or more panels.

Tip: When specifying a window to span over two or more panels, it is recommended that the same size spanning top cap also be specified for use with the window.

Tip: When ordering a 72"W or wider single pane window kit to be used with steel or fabric skins located directly below it, two clips (TS21328SR) should be ordered and installed on the top edge of the skins.

Standard Includes		Required to Specify

Sliding Panel Doors

Tip: The sliding door is located outside of the panel system when installed in the standard position.

Tip: Door infill is standard in ribbed translucent plastic.

Tip: The standard door is handed and non-locking. When a lock option is specified, the lock will be on the trail end of the door. The illustration above shows a left-handed sliding door. If a lock option is specified, the lock will be on the right (trail) side of the door.

Tip: Width of host panel should always be equal to the width of sliding door.

Tip: Height of host and receiving panels must match height of door.

Tip: Remember to specify lock cylinder and key.
▶ Lock Cylinders, page 708.

Tip: When attaching the sliding door to an Answer panel, a junction stabilizer bracket is available for added rigidity to the host panel. If a host and/or receiving panel run exceeds 4', a junction stabilizer bracket must be applied to the door end of the host and/or receiving panel run. On long runs, apply a junction stabilizer bracket or perpendicular panel every 8'.

Straight Worksurfaces

High-Pressure Laminate or Wood Veneer

Tip: Supports for freestanding and panel-mounted applications must be specified separately.

Tip: Long work surface spans require additional support.
 ▶ See understanding section for details, page 218

Premium Wood Pricing:
 For Premium wood 2 or Premium wood 3 pricing, please refer to the electronic catalog or SmartTools.

Tip: To specify 3 mm edge profile, no suffix is required. For all other edge profiles, add a suffix to the style number. (For example, US1830 becomes US1830SW for wood with square edge profile.)

Tip: Power and data access door and tray is ordered separately to be used with cutout.
 ▶ See page 558
 ▶ See page 220 for work surface size availability matrix.

Exception: 48"W work surface with soft edge used with FrameOne post leg has some limitations.
 ▶ See page 221 for connections.

Tip: Scallop will be omitted if you select power access door.

Tip: Power access door option includes the power access door and a cutout for the door in the work surface.

Tip: Power access door option is only available on straight work surfaces with 1/2" cord drop.

For Canadian Pricing
 Multiply U.S. Price by the Canadian price factor.
 ▶ See page 1 for details.

	• Right, left, and center	No cost	Specify <i>with right, left, and center grommet</i> .

► Options, continued on next page

Tip: When selecting with cord drop, subtract 1/2" from depth.

Tip: Scallop is available in the center location only. If cutout for power and data access door and tray or power access door is selected, scallop will default to omit scallop.

Tip: Power and data access door and tray is ordered separately to be used with cutout.

► Page 558

► See page 220 for worksurface size availability matrix.

Tip: Cutout for power and data access door and tray is available in the center location only. Worksurface depth must be greater than 24".

Tip: Power access door option is only available on straight worksurfaces with 1/2" cord drop.

Tip: Power access door option includes the power access door and a cutout for the door in the worksurface.

Tip: If cutout for power and data access door and tray or power access door is selected, grommet will default to no grommet.

For Canadian Pricing

Multiply U.S. Price by the Canadian price factor.

Straight Worksurfaces with Soft Edge Profile

High-Pressure Laminate or Wood Veneer

Tip: Supports for freestanding and panel-mounted applications must be specified separately.

Premium Wood Pricing:

For Premium wood 2 or Premium wood 3 pricing, please refer to the electronic catalog or SmartTools.

Tip: Long worksurface spans require additional support.

▶ See understanding section for details, page 218

Tip: To specify 3 mm edge profile, no suffix is required. For all other edge profiles, add a suffix to the style number. (For example, US2448S becomes US2448SWS for wood with square edge profile.)

Tip: Power and data access door and tray is ordered separately to be used with cutout.

▶ See page 220 for worksurface size availability matrix.

Standard Includes	Required to Specify

▶ Options, continued on next page

Premium Wood Pricing:
For Premium wood 2 or Premium wood 3 pricing, please refer to the electronic catalog or SmartTools.

Tip: Short grain laminate is only available on surfaces 60"W or less.

Tip: Soft edge is available with or without 1/2" cord drop.

Tip: When selecting with cord drop, subtract 1/2" from depth.

120° Straight Worksurfaces

High-Pressure Laminate or Wood Veneer

Tip: Supports for freestanding and panel-mounted applications must be specified separately.

Premium Wood

Pricing: For Premium wood 2 or Premium wood 3 pricing, please refer to the electronic catalog or SmartTools.

Tip: Long worksurface spans require additional support.
▶ See understanding section for details, page 218

Tip: To specify 3 mm edge profile, no suffix is required. For all other edge profiles, add a suffix to the style number. (For example, USE2448LH becomes USE2448LHSW for wood with square edge profile.)

Tip: Power and data access door and tray is ordered separately to be used with cutout.
▶ See page 558
▶ See page 220 for worksurface size availability matrix.

Tip: When facing the user edge, the side the diagonal is on is the handed side.

Tip: Power access door option includes the power access door and a cutout for the door in the worksurface.

Tapered Worksurfaces

High-Pressure Laminate

Tip: Supports for freestanding and panel-mounted applications must be specified separately.

Tip: Long worksurface spans require additional support. See understanding section for details, page 218

Tip: Power and data access door and tray is ordered separately to be used with cutout. See page 558

Exception: Power and data access door and tray only fits on tapered worksurfaces that are 24" to 30" and 30" to 24" deep.

Tip: To specify 3 mm edge profile, no suffix is required.

Universal Privacy/Modesty Screens

Tip: Universal privacy/modesty screens can be attached to 3/4"-1 1/2" thick worksurface, including height adjustable work-surfaces, universal work-surfaces, and Elective Elements work-surfaces.

Tip: The screens weigh between 9.79 lb and 11.89 lb. Take this into consideration when planning for use on height-adjustable work-surfaces.

Tip: The universal privacy/modesty screen is intended for use on the back of a worksurface.

Tip: Fabric is applied horizontally on the screen.

Tip: Screen allows for 1 1/8" cord drop or no cord drop. See understanding pages for product specific application guidelines.

Divisio Side Screen

Tip: The Divisio side screen can be used on any 3/4"- to 1 1/2"-thick worksurface.

Tip: The Divisio side screen has an overhang of 8". This is important when planning for returns or storage.

Tip: The Divisio side screen weighs approximately 14 1/2 pounds. Take this into consideration when planning for use on height-adjustable worksurfaces.

Tip: The Divisio side screen is intended for use on the front of a worksurface.

Tip: The Divisio side screen does not work on knife edge profiles.

Note: Divisio side screen is included here to simplify your planning. It may have different pricing terms than other products in this specification guide.

Corner, 120° Tables

High-Pressure Laminate or Wood Veneer

▶ Need help? Product details, page 268

Standard Includes

- Tables: High-Pressure Laminate or wood veneer
- Laminate tables: plastic 3 mm edge profile or P-edge profile on all sides
- Wood tables: wood square 3 mm edge profile on all sides

Required to Specify

- 1 Style number with appropriate edge profile suffix
P Laminate with plastic P-edge
SW Wood with square edge
 ▶ See edge profiles below.
- 2 High-Pressure Laminate or wood color number for table
- 3 Plastic color number for edge on laminate table, if selected
- 4 Options, if selected (see below)
 ▶ See *Surface Materials*, page 692.

Premium Wood Pricing:
 For Premium wood 2 or Premium wood 3 pricing, please refer to the electronic catalog or SmartTools.

Tip: Legs to support Universal Tables must be specified separately.

Tip: For leg and support guidelines, see Table and Leg Combinations, ▶ Page 275.

Tip: To specify 3 mm edge profile, no suffix is required. For other edge profiles, add suffix to the style number. (For example, BFB223636 becomes BFB223636SW for wood square edge profile.)

Tip: Screens can be used on corner, 120° tables.

- 24"W screens can be used on tables with dimensions C and D each equal to 43".
- 24"W and 30"W screens can be used on tables with dimensions C and D each equal to 49".

Tip: Corner, 120° tables with dimensions C and D each equal to 37" cannot accommodate screens.

Universal Open Side Towers

with Flush Steel, Proud Steel, Proud Laminate, or Proud Wood Fronts

► Need help?
Product details,
page 326

Standard Includes

- Tower: paint price group 1
- 1"H top: paint to match tower
- Door and drawer fronts on units with proud laminate fronts: laminate
- Door and drawer fronts on units with proud wood fronts: wood veneer
- Lock, keyed random: 9201 Polished Chrome
- Base (see below under required selections)
- Pulls: metal
- Integral pulls on units with flush steel fronts
- Drawer body: black only
- Adjustable shelves on 52"H and 65½"H: paint to match tower
- Brackets for adjustable shelves: black
- Post to support adjustable shelf: paint to match tower
- One box drawer divider and one pencil tray: black only
- Coat rod: black
- Four adjustable leveling glides
- Ganging hardware
- Counterweight package, if selected

Required to Specify

- 1 Style number with appropriate front style suffix in the space provided
 - F** Flush steel front
 - P** Proud steel front
 - L** Proud laminate front
 - W** Proud wood front
 - 2 Paint color number for tower
 - 3 Laminate color number for door and drawer fronts, if proud laminate front selected
 - 4 Wood color number for door and drawer fronts, if proud wood front selected
 - 5 Base (see below under required selections)
 - 6 Pull (see below under required selections)
 - 7 Metal color number for pulls, if proud steel, proud laminate, or proud wood front selected
 - 8 Options, if selected (see below)
- See *Surface Materials*, page 692.

	Required Selections	U.S. Price	Required to Specify

Surface Materials

This listing includes all the surface material choices that are available for the products in this specification guide.

Resources

For more information about surface materials, refer to the following resources:

Additional surface materials specification tools are available to assist you in the specification process—the Surface Materials Binders.

The global surface materials palette is a core collection of finishes that is available across multiple geographies (Americas/ EMEA – Europe, Middle East, and Africa/ APAC – Asia Pacific) and on global product lines, where applicable. For a list of finishes included in the offering, see the Surface Materials Reference Manual. Additional details, like product approvals by geography and finish number conversions, can also be found in the Surface Materials Reference Manual or see steelcase.com/surface-materials under the Select Surface section.

Open Line Laminate (OLL)

This service allows you to order non-standard laminate at an additional processing fee of \$71 U.S. per unit, plus the cost of the laminate.

When processing orders for Open Line laminate on Universal worksurfaces and Universal Storage tops, specify 2900 in the laminate finish field and enter the OLL manufacturer information. Enter the required edge finish as you would a standard laminate.

Laminate Approval and Material Requirements

To confirm whether a particular laminate has already been tested for use on a specific Steelcase product or to determine material square foot requirements:

- Visit www.steelcase.com

For additional information, refer to the *Steelcase Surface Materials Reference Manual*.

E = Established

Wood

Applies to:

- Universal worksurfaces and tables—wood veneer
- Answer pedestal tops and fronts
- Universal storage tops and fronts
- Wood skins and trims
- Infills for FrameOne legs

Steelcase carefully selects veneer and solid wood for consistent color and grain structure. Wood is a natural material and variations will occur in color, grain and texture. These variations are part of the inherent natural beauty of wood and are not considered defects.

All wood products will darken with age and exposure to ultraviolet light. This is especially apparent with cherry and maple veneer. We recommend that desk accessories be rearranged periodically to ensure even aging of wood surfaces.

When storing your wood furniture, please follow the following guidelines:

- Do not store products in trailers
- Store products in areas that simulate office temperatures (60°F to 90°F)
- Store products in areas that maintain constant, office-like humidity levels
- Keep product away from light. Cover products to make sure they are not exposed to light.

Steelcase Surfaces

Veneer

Veneers are matched for proper balance and consistency. Veneers are available flat cut or quarter cut, except for Oak, which is rift cut. Refer to the *Surface Materials Reference Manual* for descriptions of each cut.

Tip: Answer panel wood trims are only available with quarter-cut finishes with the exception of maple finishes. Maple on wood trims is only available with flat-cut finishes. For ordering simplicity, both flat-cut and quarter-cut finishes can be specified on panel trims. However, for all finishes except maple, if a flat-cut finish is selected, the trims will have the coordinating quarter-cut finish. For maple finishes, if quarter-cut is selected, the trims will have the coordinating flat-cut finish. Blending panel trims with other wood products that have flat-cut finishes may be visually acceptable for most applications. If a more exact match is desired for non-maple finishes, please specify quarter-cut finishes for the entire project. If a more exact match is desired for maple finishes, please specify flat-cut finishes for the entire project.

Open-pore finish is a medium gloss finish that leaves the wood grain texture visible to the eye and distinguishable to the touch.

Flat-cut open-pore finish choices

- 3062 FC/OP Graphite Walnut
- 3402 FC/OP Clear Cherry (Aged)
- 3412 FC/OP Natural Cherry **E**
- 3422 FC/OP Medium Cherry
- 3522 FC/OP Clear Maple*
- 3572 FC/OP Amber on Maple **E**
- 3592 FC/OP Blonde on Maple
- 3702 FC/OP Clear Walnut
- 3712 FC/OP Natural Walnut

- 3752 FC/OP Medium Walnut
- 3762 FC/OP Dark Walnut
- 3772 FC/OP Medium Mahogany on Walnut

Quarter-cut open-pore finish choices

- 3042 QC/OP Ash*
- 3222 QC/OP Clear Maple*
- 3272 QC/OP Amber on Maple **E**
- 3292 QC/OP Blonde on Maple
- 3302 QC/OP Clear Walnut
- 3312 QC/OP Natural Walnut
- 3322 QC/OP Dark Mahogany on Walnut
- 3352 QC/OP Medium Walnut
- 3362 QC/OP Dark Walnut
- 3372 QC/OP Medium Mahogany on Walnut
- 3382 QC/OP Graphite Walnut

Rift-cut open-pore finish choices

- 3602 RC/OP Desert Oak
- 3612 RC/OP Warm Oak **E**
- 3692 RC/OP Espresso Oak

Full-fill finish is a medium-gloss finish that completely fills the grain texture, yet allows the grain pattern to be seen. The wood has a lustrous, satiny look, and it is smooth to the touch. This finish is available on the wood worksurface or field-installed top only.

Flat-cut full-fill finish choices

- 3064 FC/FF Graphite Walnut
- 3404 FC/FF Clear Cherry (Aged)
- 3414 FC/FF Natural Cherry **E**
- 3424 FC/FF Medium Cherry
- 3524 FC/FF Clear Maple*
- 3544 FC/FF Blonde on Maple
- 3574 FC/FF Amber on Maple **E**
- 3704 FC/FF Clear Walnut
- 3714 FC/FF Natural Walnut
- 3724 FC/FF Dark Mahogany on Walnut
- 3754 FC/FF Medium Walnut
- 3764 FC/FF Dark Walnut
- 3774 FC/FF Medium Mahogany on Walnut

Quarter-cut full-fill finish choices

- 3224 QC/FF Clear Maple*
- 3274 QC/FF Amber on Maple **E**
- 3294 QC/FF Blonde on Maple
- 3304 QC/FF Clear Walnut
- 3314 QC/FF Natural Walnut
- 3324 QC/FF Dark Mahogany on Walnut
- 3354 QC/FF Medium Walnut
- 3364 QC/FF Dark Walnut
- 3374 QC/FF Medium Mahogany on Walnut
- 3384 QC/FF Graphite Walnut

Rift-cut full-fill finish choices

- 3604 RC/FF Desert Oak
- 3614 RC/FF Warm Oak **E**
- 3694 RC/FF Espresso Oak

**To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase advertising stock. Please use form number 09-0000756 for 3042,05-0001370 for 3222 and 3224.*

Select Surfaces

For information on products within Select Surfaces, including accent paints and fabrics from DesignTex, Gabriel, Kvadrat, and Pollack, please refer to the *Surface Materials Reference Manual* or visit steelcase.com/surface-materials under the Select Surfaces section.

Premium Veneers

A selection of Premium veneers in this collection are available on most Steelcase brand products. The collection will be available as close to standard leadtimes as possible. However, because adequate supplies of veneer and solids must be secured, all orders will be scheduled individually. Leadtimes will vary based on Premium veneer and Premium solids availability at the time the order is placed. The collection is Graded-In as Wood Group 2 and Wood Group 3, and supported like standard veneers to make ordering easy. Please see the Steelcase surface materials section on village.steelcase.com for sample information and product line availability. All premium veneers are in clear-coat.

Quarter-cut open-pore finish choices

Wood Group 2

- 3032 QC/OP Dark Thin Line Bamboo
- 3052 QC/OP Ribbon Sapele

Wood Group 3

- 3832 QC/OP Figured Anegre
- 3842 QC/OP Figured Makore

To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase advertising stock. Please use form number 09-0000755 for 3032, form number 09-0000757 for 3052, form number 09-0000758 for 3832, and form number 09-0000759 for 3842.

E = Established

Composite Veneer

Composite veneers are an engineered wood intended to create specific grain patterns and characteristics. They are pre-stained and finished with Steelcase's Clarity water-borne UV topcoat, which protects the environment while providing durability and clarity. Only open-pore finishes are available on composite wood. Composite veneer and matching edge bands are available on most Steelcase brand products. Composites, for use as a solid nosing substitute, are not available. Steelcase does not recommend mixing composite veneers with natural solid nosings because composite and natural wood grain and color matching are rarely compatible. Composite veneers are Graded-In as Wood Group 1 pricing.

Composite veneers are not available on Answer trims.

Flat-cut open-pore finish choices

- 3JDX FC/OP Oak Composite
- 3JFX FC/OP Maple Composite
- 3JHX FC/OP Cherry Composite
- 3JXX FC/OP Walnut Composite

Quarter-cut open-pore finish choices

- 3F8X QC/OP European Walnut Composite
- 3GAX QC/OP Gold Teak Composite
- 3GFX QC/OP Rosewood Composite
- 3GGX QC/OP Zebrano Composite
- 3HGX QC/OP Oak Composite
- 3HVX QC/OP Walnut Composite
- 3JEX QC/OP Maple Composite
- 3JGX QC/OP Cherry Composite
- 3ZNX QC/OP Night Cerused Oak Composite

Natural Veneer

Natural veneer is available in the Select Surfaces offering. Natural veneer may have extended lead-times. Place your order as you normally would for any other finish, calling out the appropriate finish code. Natural veneers are Graded-In as Wood Group 1 pricing.

The following finishes are available through the natural veneer offering:

Flat-cut open-pore finish choices

- 35A2 FC/OP Blanch Maple
- 37A2 FC/OP Thunder Walnut

Quarter-cut open-pore finish choices

- 32A2 QC/OP Blanch Maple
- 33A2 QC/OP Thunder Walnut

Rift-cut open-pore finish choices

- 36A2 RC/OP Volcanic Oak

Planked Veneer

Planked veneer is available in the Select Surfaces offering. Planked veneer may have extended lead-times. Place your order as you normally would for any other finish, calling out the appropriate finish code.

The following finishes are available through the planked veneer offering:

Wood Group 1

- 3P41 OP Planked Cherry
- 3P51 OP Planked Maple
- 3P61 OP Planked Oak
- 3P71 OP Planked Walnut

Tip: Known for its uniqueness, planked veneer has intentional and natural variations that include, but are not limited to: character marks, grain pattern, color, and natural color aging.

Custom Surfaces

Customiz stain is a service that allows you to create your own stain colors and finishes on standard veneer. Customiz stain color is available on all product lines that offer wood veneer.

A \$500 stain-matching fee applies on CUSTOMIZ requests (Exception: The \$500 fee does not apply on matches to Coalesse standard finishes or for a low-gloss finish request on a standard color). The \$500 fee covers the cost of formulating the Customiz color finish and applies regardless of whether or not an order for product is placed.

In addition, an approval form must be signed to indicate customer acceptance of Customiz match. A \$1,500 initiation fee will be charged prior to first order entry. This initiation fee activates the finish for unlimited use on any Steelcase product for an 18 month time period. After the 18 month time period has lapsed, the Customiz finish may be reactivated for another 18 months for a \$1,000 fee at any point within five years after the \$1,500 initiation fee was paid. If the finish is not reactivated within five years after the \$1,500 initiation fee was paid, the finish will be culled and the customer will need to pay the \$1,500 initiation fee again. All style number related Customiz charges products are no cost as of April 2014. The matching and initiation fees are not discountable.

Customiz stain takes 10 days to formulate. Consult the *Surface Materials Reference Manual* for more information. Custom veneers are also available and must be quoted by Steelcase specials group. Customiz stain on custom veneers takes 2 to 4 weeks to formulate.

Requirements and information on ordering a Customiz stain color are found in the *Surface Materials Reference Manual*.

Plastic

Steelcase Surfaces

- Applies to:

E = Established

The standard application direction of fabric on Answer panels, skins, and Hutch kit tackboard is warp horizontal. Standard Steelcase fabrics were designed for this application direction.

The optional application direction of fabrics on Answer panels, skins, and Hutch kit tackboard is warp vertical. This is most commonly used on COMs designed for warp vertical application.

For more information about the warp direction of fabrics, see the *Surface Materials Reference Manual*.

Wood Veneer Grain Directions

The appearance of wood veneer may change slightly depending on the angle from which it is viewed. This natural phenomenon is called polarization, and it can be seen on natural veneer, and to a lesser extent on composite veneer. Polarization is often noticed on worksurfaces installed at a 90-degree angle with each other. Please refer to the following illustrations for an understanding of grain direction on your installation.

Lock and Keying for Universal Steel Storage Products	708
Maintenance Agreement Renewals	710
Style Number Index	712

Lock and Keying for Universal Steel Storage Products

All locking products are standard with factory-installed, keyed-random locks. Consecutive, specific, and random keying are available as field-installed options. *Exception: Individual locking drawers are only available with field-installed locks.*

Locks consist of a factory- or field-installed lock cylinder and a factory-installed lock face ring.

Two types of locks are available — the standard keying system (FR series) and the master keying system (XF series). All the locks in the XF series can be opened with a single master key.

Factory-Installed Keying

Factory-installed locks are always key random (standard) or master key random (option). Key random means that the locks will be assigned arbitrarily at the factory with key numbers ranging from FR305 to FR454 (Master keying numbers: XF1001 to XF1150). All locks within a unit will be keyed alike.

Tip: Random keying can mean that different furniture units will have the same key number. If you must have all locks keyed differently, you should specify field-installed, key specific or key consecutive lock cylinders.
▶ See below.

Key Random

Required to Specify

Master key random	+\$26	Specify with master key random.
--------------------------	-------	---------------------------------

Field-Installed Keying

Field-installed locks are only available on products that include factory-installed lock mechanisms.

Specify "plug" when specifying furniture, and the product will ship with a plastic plug in place of the lock cylinder.

Front-removable lock cylinders must be specified separately. You must also order a special lock tool to install or remove lock cylinders in the field.

Tip: Lock tools are reusable. You do not need to order additional lock tools with every furniture order.

Lock cylinders will be shipped separately so that you can install the locks when you are ready.

Three keying choices are available for field installation—random (standard), specific, and consecutive. All three are also available with master keying, which means that all locks can be opened with a single master key.

Key random means that the locks will be assigned arbitrarily at the factory with key numbers ranging from FR305 to FR454 (Master keying numbers: XF1001 to XF1150).

Tip: Random keying can mean that different furniture units will have the same key number. If you must have all locks keyed differently, you should specify key specific or key consecutive lock cylinders.

Key Random

Key specific means that you can specify any key number from FR305 to FR454 (Master keying numbers: XF1001 to XF1150). This option can be used to key all the furniture units in a workstation or department the same.

Tip: Designate the quantity per key number in your specification.

▶ See example at right.

Key Specific

Key consecutive means that you can specify lock numbers in a consecutive order to ensure that no two locks have the same key number until the key sequence repeats. You must select a beginning key number from FR305 to FR454 (Master keying numbers: XF1001 to XF1150).

Key Consecutive

Example of a typical lock cylinder specification is shown below:

10	LOCK9201FR	FR320
5	LOCK9201FR	FR350
15	LOCK9201XF	XF1100
30	Total	
1	877102003SR	standard lock tool
1	877102002SR	master lock tool

Field-Installed Lock Cylinders

Tip: Lock price is included in price of furniture with locks.

Tip: For replacement lock cylinders, refer to Service Parts.

Standard Includes		Required to Specify
<ul style="list-style-type: none"> Lock cylinder: 9201 Polished Chrome or 9250 Ember Chrome Two keys 		1 Style number 2 Options, if selected (see below)

Options	U.S. Price	Required to Specify
Key specific	No cost	Select key number from FR305–FR454.
Key consecutive	No cost	Specify <i>key consecutive</i> and select beginning key number from FR305–FR454.
Master key random	+\$26 each	Specify <i>master key random</i> .
Master key specific	+\$26 each	Specify key number from XF1001–XF1150.
Master key consecutive	+\$26 each	Specify <i>master key consecutive</i> and select beginning key number from XF1001–XF1150.

Maintenance Agreement Renewals

About Maintenance Agreement Renewals

Steelcase maintenance agreement renewals provide an extension of our enhanced support system that features software/firmware enhancements, prioritized technical support, expedited shipping for hardware replacements, and warranty extension on technology components when outside of warranty.

Renewal Lengths and Bundling Option

Maintenance agreement renewals are available for 1, 2, and 3 year terms.

Customers with multiple maintenance agreements will be able to bundle some or all of their applicable Steelcase technology products into a single maintenance agreement.

How to Order

Maintenance agreement renewals follow a special ordering process that requires a customer specific quote generated by Steelcase. Please contact MAAs@steelcase.com for complete renewal process information or with any questions.

Tip: When selecting the 2 year renewal option, the list price is 10% less per year compared to the base price. When selecting the 3 year renewal option, the list price is 25% less per year compared to the base price.

Note: A maintenance agreement renewal may be ordered for one, two, and three year periods, after original purchase as long as there is an active agreement in place. Maintenance agreement renewals cover up to four years from the unit's original shipping date.
