Class A1 products will not contribute to fire in any stage, including fully developed fire. For this reason, they are assumed to be capable of satisfying all requirements of all lower classes as well.

Satisfying the same criteria as class B for the SBI-test according to EN 13823. In addition, under conditions of a fully developed fire these products will not significantly contribute to the fire load and fire growth.
### Applications

**Residential:** with optional Hopper shade, with optional backrests and with optional floor protection felt for delicate surfaces. Indoor or outdoor, as a kitchen table or as an eye-catching garden set-up.

**Project:** ideal to place several tables next to each other and create a long row. Educational projects, hospitality, public areas, ...

### Floor fastening

Hopper picnic is furnished with an optional floor anchoring set ø 9 mm:

- four jugged stainless steel plates to be fixed with bolts.

For an even more rigid anchoring system, Hopper legs can be ordered with holes ø 12 mm.

### Important

Do not throw away the packaging material. You need it to attach the legs to the tabletop.

1. Leave the box on the pallet.
2. Remove the lid of the box.
3. Take the legs out of the box.
4. Put the lid back on the box.
5. Put the tabletop on top of the box.
6. Assemble the Hopper picnic.

### Maintenance

*Find maintenance instructions at the downloads section of extremis.com for:*

**Oiling the wood with Extremis Wood Protector.** We recommend oiling the wood once or twice a year. 1x before the summer and 1x after the summer as protection for the winter.

- In order to smoothen the surface again after a thorough cleaning, lightly sand your wood with 80 grit sanding paper or a sanding pad.

**USAGE ADVISE**

### F.a.q.

**Q:** Do you need to oil the wood?

**A:** Just like other types of wood, Iroko will gradually become rougher and start to turn grey as a consequence of exposure to the sun and rain. Small cracks and crevices can also appear as part of this process. We strongly advise everyone to treat the furniture with our Wood Protector. This 100% natural oil controls the moisture level within the wood, which makes the planks stay stable for longer, and the layer of oil also helps to prevent spilled liquids from being absorbed, so that stains tend to stay superficial. It is best to repeat this treatment at regular intervals.

**Q:** Won’t those wide boards curl up after a while?

**A:** Iroko hardwood & Hellwood are very stable types of wood and Class I. Nevertheless, the tabletop is completely supported by a galvanised frame to which each board is attached separately. The wood has no structural function.
