How to Get the Most Out of This Book

Tip 1

Watch the tabs on the right-hand edges of the pages. They'll always indicate which chapter you are in.

Tip 2

Use the Statement of Line pages for an overview of the available components, their sizes, and page references for additional information. Each *Understanding* chapter includes a statement of line after the table of contents.

Tip 3

Find cross references by looking for page numbers flagged with an arrow.

Tip 4

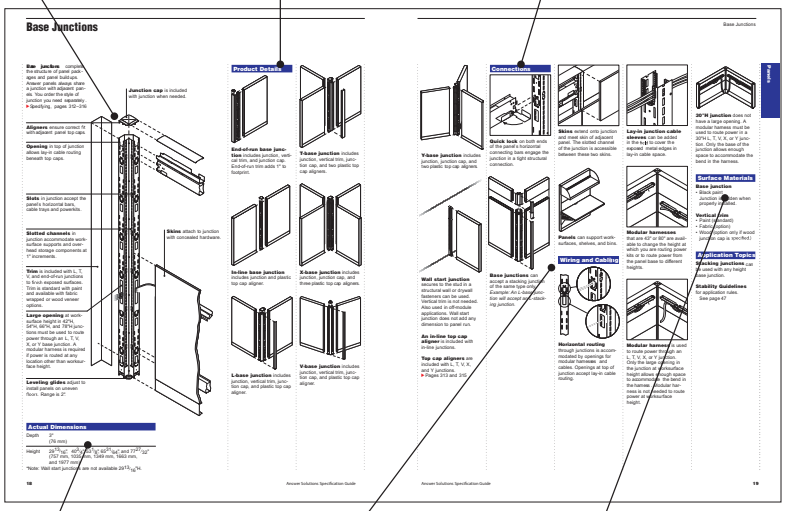

Study the product detail pages in the *Understanding* section to learn everything an expert knows about specific products. Each product detail page in this section contains the following features, where applicable:

- Product Drawing
- Actual Dimensions
- Product Details
- Connections
- Wiring and Cabling
- Surface Materials
- Application Topics

Product Drawing shows you what the product looks like and points out important features.

Product Details gives specific information on the product and how it is used.

Connections describes how the product is assembled or how it attaches to another product.

To determine how many skins are needed to complete a panel, consult the table at the right.

Tip: Remember to order skins for both sides of the panel buildup.

Watch for tips throughout the text that give you explanations and helpful instructions.

Tip 8

Learn what you cannot do by looking for drawings crossed out with an "X."

Tip 9

Requirements for Freestanding Applications

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

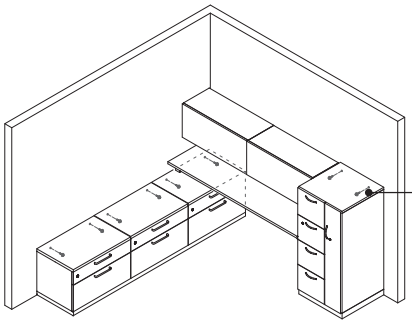

1. Counterweights are not required for lateral files, towers, workstation verticals, cabinets, and bookcases anchored to the floor.

Floor anchor bracket (for TS Series Storage, TS 200 Series Storage, 900 Series Storage, 800 Series Storage and Universal Storage with 3" base) secures lateral files, towers, workstation verticals, cabinets, or bookcases to the floor for stability or to reduce the risk of hazards during earthquakes in seismic zones. Four bracket packages are required for each cabinet.
Note: **Local seismic requirements vary.** *Compliance with local code requirements is the responsibility of the customer or their authorized agent. For a California Office of Statewide Health Planning and Development (OSHPD) approved anchor bracket, contact Steelcase Specials.*
Tip: Anchor bracket cannot be used with pedestals.

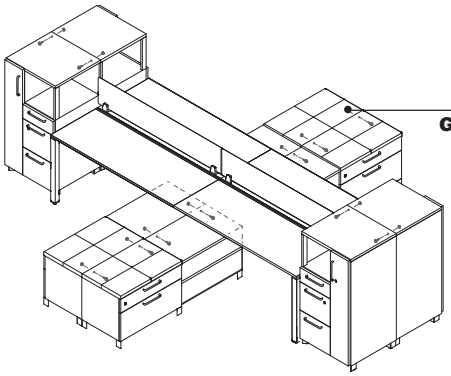

Floor anchor brackets for Universal with FrameOne foot secure lateral files and towers to the floor for stability or in seismic zones to reduce the risk of hazards during earthquakes.
Note: **Local seismic requirements vary.** *Compliance with local code requirements is the responsibility of the customer or their authorized agent.*

Wall Anchors

2. Counterweights are not required for lateral files, towers, workstation verticals, cabinets, and bookcases anchored to the wall.

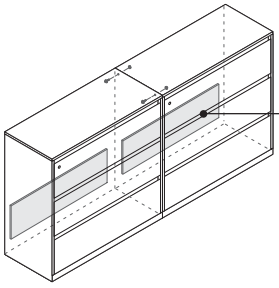

For wall anchoring of lateral files, towers, workstation verticals, cabinets and bookcases, consult with the building's designated design professional (architect or engineer) and work with local codes authorities for approvals to ensure adequate support when product is fully loaded.

Ganging Brackets

3. Counterweights are not required for lateral files, towers, workstation verticals, cabinets, and bookcases ganged back-to-back with ganging hardware.

TS Series towers which do not include ganging hardware, order *8425808SR* from Service Parts.

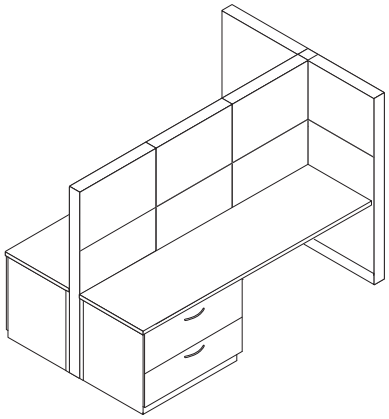

Counterweights

Units ganged side-by-side **require** counterweights.

Requirements for Panel Applications

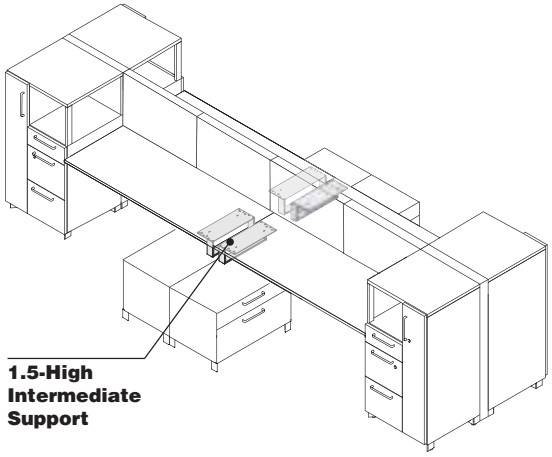

Panel stability guidelines must be met prior to determining counterweight requirements.
▶ See *Panel Stability Guidelines* in the appropriate panel specification guide. (Storage may support panel stability)

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

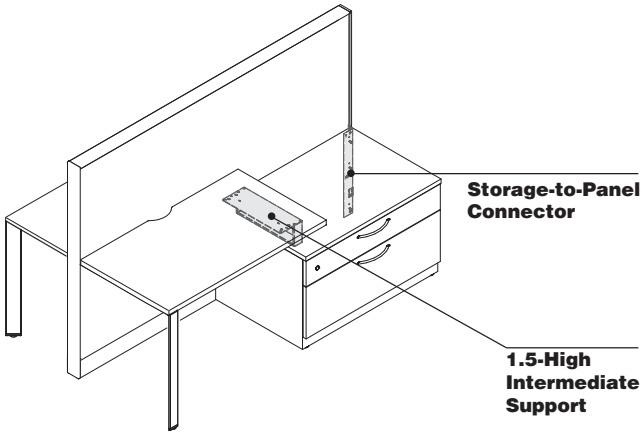

1. Counterweights are not required for Two Drawer lateral files installed right below a worksurface attached to the panel system when the application is mirrored back-to-back (a two-pack minimum).

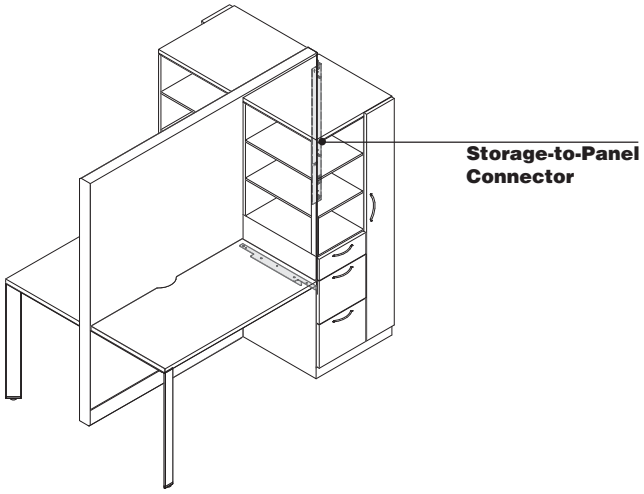

TS Series underworksurface lateral files are only intended for use under a panel-mounted worksurface and cannot be used as freestanding.

2. Counterweights are not required for One-High and 1.5-High lateral files and cabinets used with an intermediate support, when the application is mirrored back-to-back (a two-pack minimum).
Note: This includes storage either perpendicular or parallel to the panel.

3. Counterweights are not required for One-High, 1.5-High, and Two Drawer lateral files and cabinets used with a storage-to-panel bracket to support the panel run if the application is mirrored back-to-back (a two-pack minimum) and the panel run is equal to or greater than 6'.

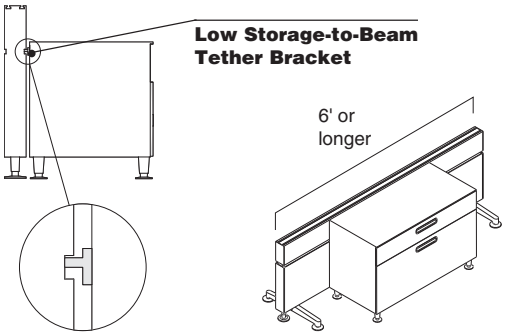

4. Counterweights are not required for towers used with a storage-to-panel connector to support the panel run, if the application is mirrored back-to-back (a two-pack minimum) and the panel is equal to or greater than 5'.

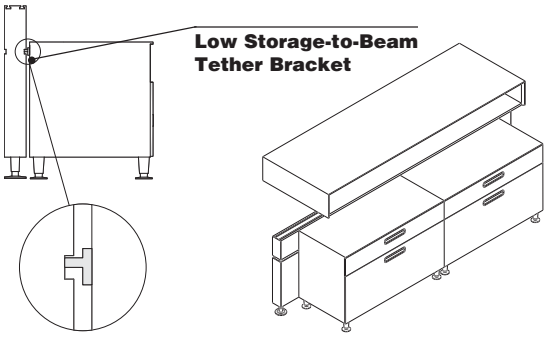

Requirements for c:scape Tethered Applications

c:scape stability guidelines must be met prior to determining counterweight requirements.
▶ See *c:scape Stability Guidelines* in the *c:scape Specification Guide*.

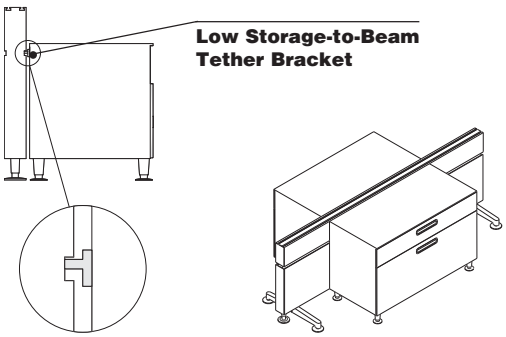

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

1. Counterweights are not required for a One- and 1.5-High lateral files and low storage 48"W or smaller tethered to a c:scape beam when the beam width is 6' or larger.

2. Counterweights are not required for One- and 1.5-High lateral files and low storage tethered to a c:scape beam when the beam has mid storage mounted parallel and the beam length is equal to or greater than the combined low storage width.

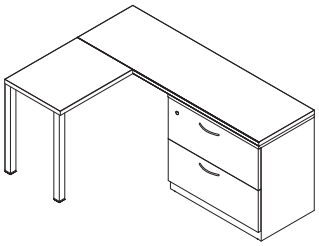

3. Counterweights are not required for One- and 1.5-High lateral files or low storage tethered to a c:scape beam when the storage is the same size and mirrored back-to-back on both sides of the beam.

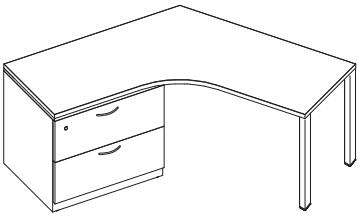

Requirements for Answer Freestanding Desk Applications

Answer Freestanding Desk guidelines must be met prior to determining counterweight requirements.
▶See *Answer Freestanding Desk Stability Guidelines* in the *Answer Freestanding Specification Guide*.

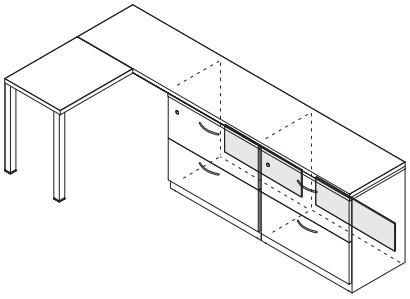

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

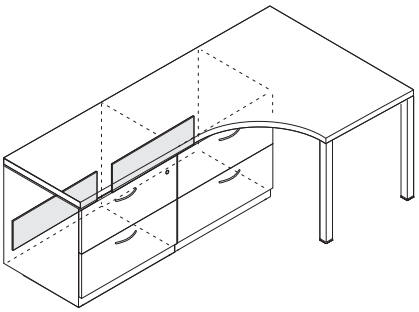

1. A counterweight is not required for a single Two Drawer lateral file attached to desks connected in an L-configuration.

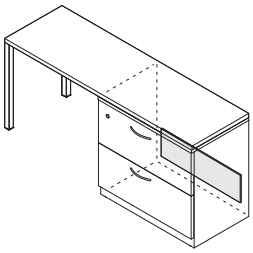

2. A counterweight is not required for a single Two Drawer lateral file attached to a desk made with corner, extended corner, or 120° corner worksurfaces.

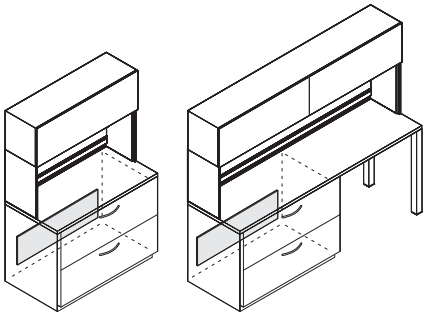

L-configurations with two or more lateral files **require** counterweights in each file.

Configurations with two or more lateral files **require** counterweights in each file.

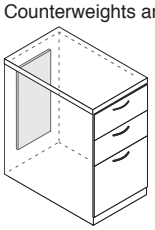

Counterweights are **required** for all lateral files in stand-alone desk or credenza applications.

Hutch kit applications with lateral files always **require** counterweights in the lateral files.

Requirements for Pedestals in Freestanding Applications

Counterweights are required for all freestanding applications.

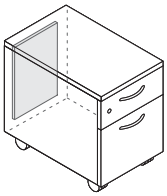

1. Universal fixed pedestals converted to freestanding pedestals require a counterweight and drawer interlock system.

Universal fixed to freestanding pedestal conversion kit includes ⅛"H steel top, counterweight package, and drawer interlock system.

Fixed pedestals, converted to freestanding with a laminate or veneer top, require a counterweight and drawer interlock system. Drawer interlock system is available from service parts.

TS Series fixed pedestals are only intended for use under a panel-mounted worksurface and cannot be converted to freestanding.

Laminate fixed pedestals can never be freestanding.

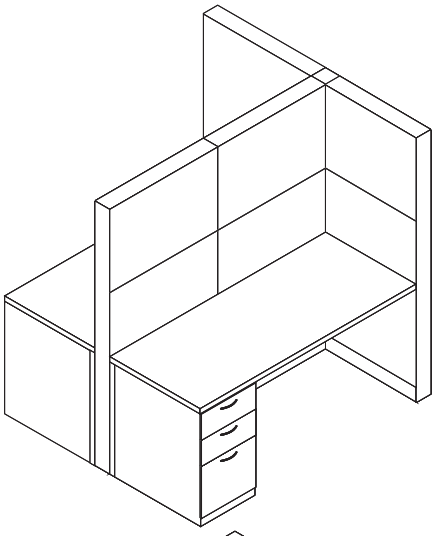

2. Mobile pedestals include counterweight and drawer interlock system as standard.

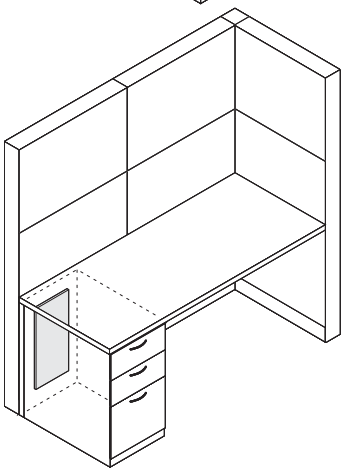

Requirements for Pedestals in Panel Applications

Panel stability guidelines must be met prior to determining counterweight requirements.

▶ See *Panel Stability Guidelines* in the appropriate panel specification guide.

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

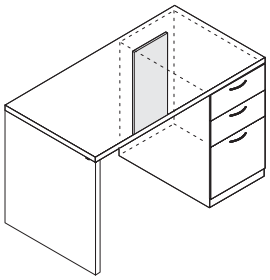

Counterweights are not required for fixed pedestals installed below a worksurface attached in a panel spine application. Single workstation applications **require** a counterweight in each pedestal.

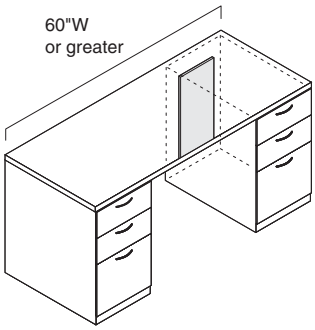

Requirements for Pedestals in Answer Freestanding Desk Applications

Answer Freestanding Desk guidelines must be met prior to determining counterweight requirements.
▶See *Answer Freestanding Desk Stability Guidelines* in the *Answer Freestanding Specification Guide.*

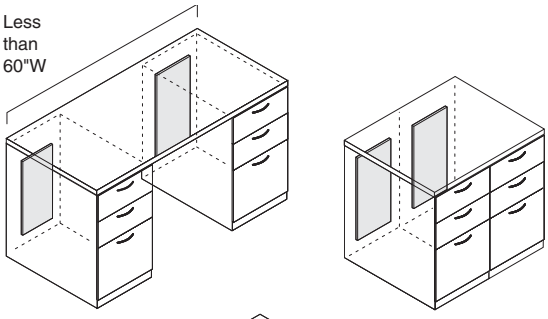

Counterweights are required as shown in the product specification pages unless any of the following conditions are met:

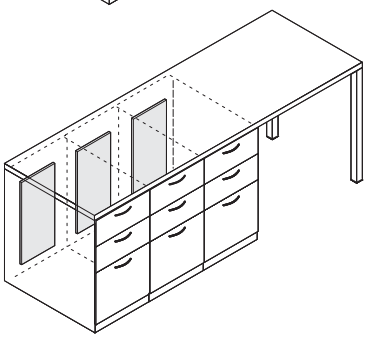

1. Single pedestal desks less than 48"W require a counterweight and an interlock. Single pedestal desks with 30"D pedestals require a counterweight and interlock.
Tip: Interlock is available as a service part for Universal pedestals, 1043575SR for box/box/file and file/file configurations.

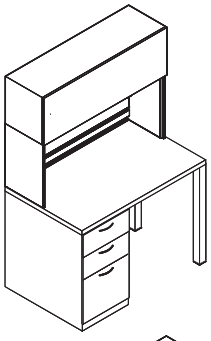

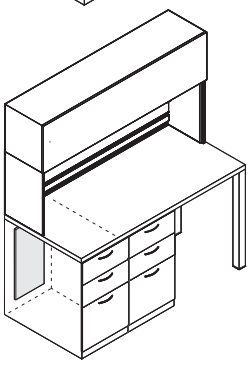

2. Double pedestal desks 60"W and wider only require one pedestal with counterweight.

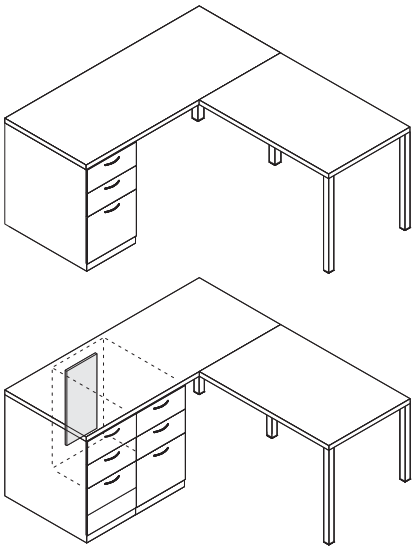

All other desk applications with multiple pedestals **require** a counterweight for each pedestal.

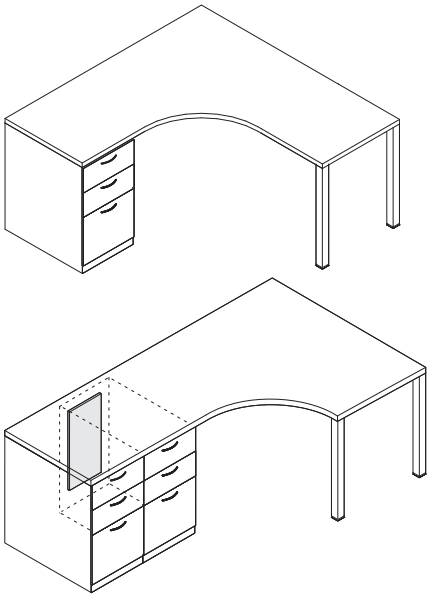

3. Counterweights are not required for a single fixed pedestal in desk with hutch kit applications. Any additional pedestals within the application **require** counterweights.

Requirements for Pedestals in Answer Freestanding Desk Applications, continued

4. A counterweight is not required for a single fixed pedestal attached to a desk attached to another worksurface in an L-configuration. Any additional pedestals within the application require counterweights.

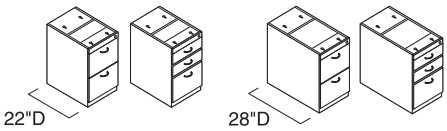

5. A counterweight is not required for a single fixed pedestal attached to desks made with corner, extended corner, or 120° corner worksurfaces. Any additional pedestals within the application require counterweights.

Laminate and wood veneer tops with square-edge profiles are available in place of standard 1"H steel tops. Laminate and wood veneer tops are 3/16" taller than steel tops and will add that dimension to the overall height of the lateral file.

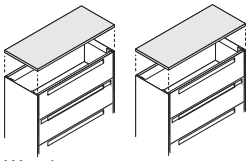

Security top is available as an option for installations where the file will be installed beneath a worksurface, but not physically attached. Thin steel top prevents unauthorized access to the contents of the cabinet. Security top is not structural and can be specified on 28"H files only. Security top reduces overall height of file to approximately 27"H.

Ganging hardware is included to provide alignment by joining adjacent components side-by-side, back-to-back, or both.

Connections

Fixed pedestals are intended to attach under a worksurface for security and support. Three pedestal depths are available to correspond with Universal worksurface depths. Proud-front pedestals exactly match the depth of Universal worksurface. Flush-front pedestals are 7/8" shorter.

Filler conceals the gap that may exist between the face of a panel and the back of a 27"H pedestal. Fillers are also used to provide stability for pedestal and worksurface configurations that are not panel-wrapped.
Tip: Fillers for proud front pedestals conceal a ½" gap. Fillers for flush front pedestals conceal a 1 3/8" gap.

Freestanding applications that don't require attachment to a worksurface should be used with a conversion kit that includes a steel top, counterweight package, and components to convert the locking system to a safety interlock system.
▶Page 245

Field-installed accessories are available, including pencil trays, stationery trays, dividers, and rails.
▶Page 350

Upmount brackets are optional for use on Answer, Kick, Avenir, and Montage. Brackets attach the bin near the top of 54"H panel to enable overhead storage to be used on lower panel heights. Bins using an upmount bracket must be installed on a panel of the same width.

Two upmount bin brackets can be hung side by side in an in-line, T-, or X-application. Bin can be upmounted on slatwall skin as long as there is not another bin or another slatwall skin on the adjacent in-line panel.

Omit brackets option must be specified when bin is being used in hutch kit, or when attaching bin to a horizontal wall attachment bracket. Order hutch kit separately.

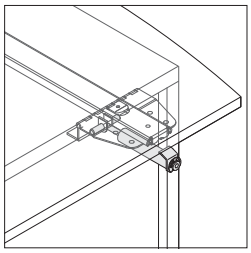

Picture frame door, optional, is available on Universal over the case and in the case bins with flat steel fronts only, and is an aluminum door frame with acrylic or glass inserts. An omit insert option is also available which allows custom material to be field installed in the aluminum door frame.

The acrylic door insert is a white acrylic. A door assist mechanism is not available as an option on a bin with an acrylic door insert due to the light weight door.

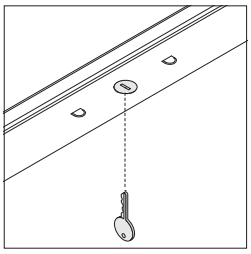

The glass door insert is tempered translucent glass. If a glass door insert option is specified and a door assist mechanism is also required, an assist mechanism must be specified as a separate option to the storage bin. Due to the weight of the glass door insert, it is recommended to specify the optional door assist mechanism.

The omit insert custom material must be ordered from a material vendor. If an omit insert option is specified and a door assist mechanism is also required, an assist mechanism must be specified as a separate option to the storage bin. The weight of a custom insert on a Universal over the case bin can not exceed 10½ pounds. An insert for a Universal over the case storage bin door with an assist mechanism must weigh within the range of 7¼ pounds to 10½ pounds or the assist mechanism will not function correctly. Custom materials being installed in a door insert must comply with local building codes. Consult with local authorities to determine compliance requirements. The use of safety glass is required if installing custom glass in a door insert. To install customer provided material in a picture frame door with the insert omitted, make sure the material is cut precisely to the sizes listed on the dimensions matrix.

▶ See *Dimensions for Custom Field-Installed Picture Frame Door Inserts*, page 63

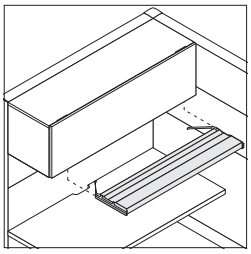

Door assist mechanism, optional, consist of a gas cylinder and spring that provides an assisted open and close of the door. When opening the door, the spring pulls the door to the fully recessed position. When closing the door, the assist mechanism will slowly close the door. Universal bins ship with two assist mechanisms per door when specified.

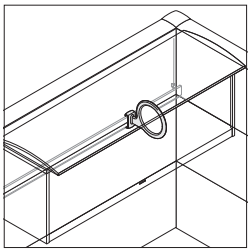

Lock in bin is concealed from view beneath the shelf. Locks are available factory or field-installed. Factory installed locks are standard and available keyed random only. Two-door units are keyed alike. Optional field installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. The height dimension of the bracket (from top of personal shelf to the bottom of the bracket) is 6½"H.

Connections

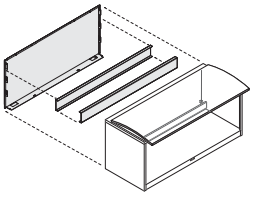

Steel support hooks on end supports insert into the slotted channel of a panel or wall channel and lock into place with a safety catch.

Universal shelf may be mounted at 38"H or lower if another panel-mounted component prevents it from being seated upon.

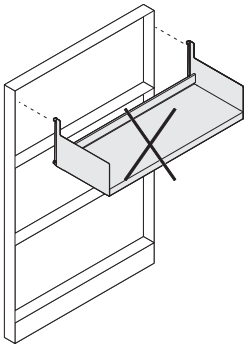

Universal shelves for use on Montage panels have a taller end support to accommodate vertical slots in frame.

Universal shelves cannot mount on a 55"H Montage frame. Contact Steelcase Specials for a solution on a 55"H frame.

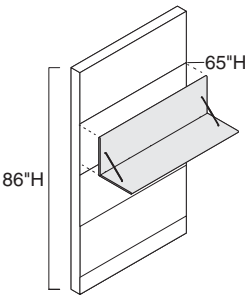

On-module attachment hooks cannot be attached to upmount brackets.

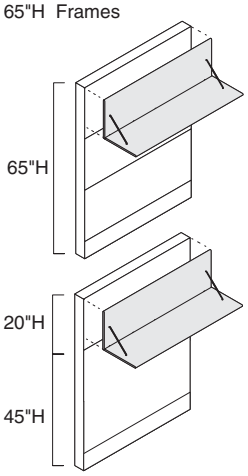

Width of shelf must match the width of the panel or panels that it is attached to with the on-module brackets. Shelves may span up to two frames.

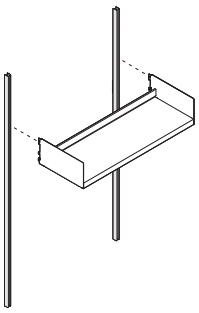

Overhead storage components cannot be attached to Montage frames with glass tiles.

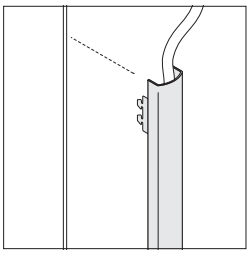

Overhead storage shelves install at 65"H only. They cannot install on a 10"H stacker or any base frame lower than 65"H.
Tip: A special half-height shelf is available, contact Systems Specials Group for an engineering quote.

Horizontal wall attachment brackets can be positioned on wall at height needed.

Connections

Horizontal wall attachment brackets can be used to attach universal sliding door, universal over the case, and universal in the case bins to a building wall. TS Series bins cannot attach to horizontal wall attachment brackets.

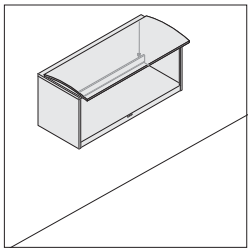

Shelves can not hang off horizontal wall attachment brackets.

Mounting of horizontal wall attachment brackets must include attachment to at least two wall studs, but it is recommended to attach to all studs in wall behind the storage bin. Storage bins that are 24"W or 25"W can only be mounted with horizontal wall attachment brackets if wall is constructed with 16" stud centers.

Wall channel can be positioned on wall at height needed.

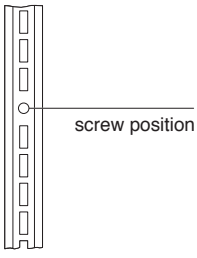

Connections

Wall channels can be used to support shelves, overhead storage bins, worksurfaces, and tackboards. Wall channels can be shared.

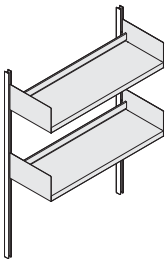

Field install:

- Concrete walls with Hilti type anchors.
- Drywall or plywood with 5/8" thick Toggler R-type 3/16" wall anchors with countersunk flat head screw.
- Steel or wood studs with #10 sheet metal or wood screws of appropriate length with countersunk flat head screw.

Anchors must be used in each screw hole location on the wall channel.

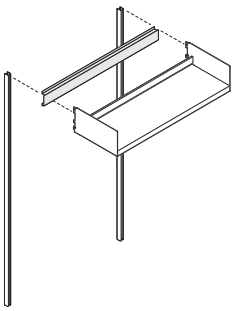

Components attach at 1" increments, but screws block some slot locations.

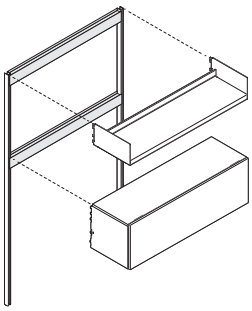

Component limits for each pair of wall channels are as follows:

- Two bins or shelves
- One worksurface and two shelves
- One worksurface and one bin

Horizontal brace is available to reinforce vertical wall channels that support storage bins, shelves, or worksurfaces that are attached to walls. Bins and shelves that are 48"W or less do not require a horizontal brace. All worksurfaces require horizontal braces.

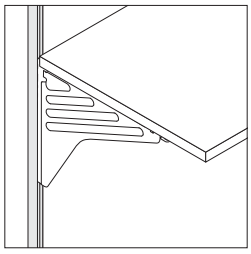

Wall channel horizontal brace is required for EACH storage bin or shelf that is wider than 48". The brace should be placed at the position along the vertical wall channel where the top of the bin or shelf will be placed.

Width of horizontal brace must match width of shelf or storage bin.

Wall channel horizontal brace is also available in 42" and 48" widths and can be used in applications where there is concern regarding the strength of the wall. These braces must also be used with wall-mounted worksurfaces.

Wall hang channels for shelves, overhead storage bins, or tackboards cannot be used with a wall start junction.

Worksurfaces may be attached to wall channels with cantilevers, subject to the following application guidelines:

- All worksurfaces must be 24"D or less.
- Worksurfaces must be supported by a cantilever or legs every 42" or 48". Cantilevers can be shared when worksurfaces are adjacent.
- Wall channel horizontal braces must be installed directly behind all wall-mounted worksurfaces, and also at the top of the wall channels.
- Worksurface-supported pedestals cannot be hung from a wall-mounted worksurface.

On-Module Brackets and Hooks

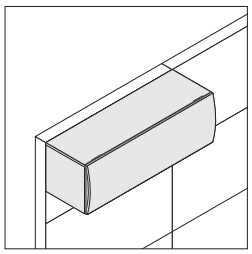

On-module brackets and hooks are used to mount overhead bins and universal shelves to panels with vertical slot patterns. Answer, Kick, Avenir, and Montage panels can support on-module attachment brackets.

Universal personal shelves can attach on-module to all panels except Montage.

Width of overhead storage unit must match the width of the panel or panels that it is attached to. Storage bins or shelves may span up to two panels.

Additional support for stability may be required when shelves and overhead storage bins are attached to panels. Counterbalancing loads on the opposite sides of the panels increases stability.
Tip: See Stability Guidelines *in each corresponding specification guide.*

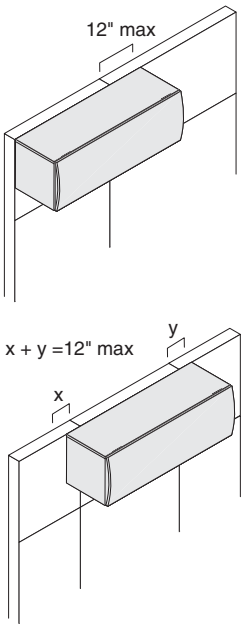

On-module attachment brackets install in panel seams.

On-module brackets can be used above and adjacent to slatwall on Answer and Montage panels.

On-module brackets can be used with a panel stacker on Answer, Kick, and Montage panels. Follow standard panel stacker guidelines for each panel.

Off-module brackets are used with bins up to 12" wider than the panel, allowing them to overhang the panel seam.

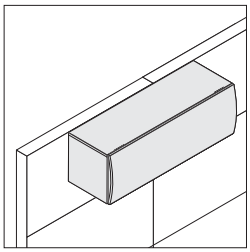

Off-Module Brackets

Vertical off-module brackets, optional, can be used to mount one or two sides of the overhead bin off-module on Answer, Kick, Avenir, Montage, and V.I.A. with vertical-slot-patterned panels. Both of these brackets attach to the on-module bracket that comes standard with the overhead bin. Vertical off-module brackets allow bins to be installed a maximum of 12" off-module. Vertical off-module brackets can be used with 30"W to 60"W Montage bins only.

Vertical off-module brackets can be used above and adjacent to slatwall on Answer and Montage panels.

Vertical off-module brackets can be used with a panel stacker on Answer, Kick, and Montage panels. Follow standard panel stacker guidelines for each panel.

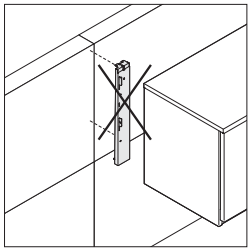

Horizontal off-module brackets, optional, accommodate off-module installations of overhead storage bins on panels with horizontal slot patterns. Enhanced off-module Montage frames can support horizontal off-module brackets. Horizontal off-module brackets can be used with 24"W to 48"W Montage bins only.

Horizontal off-module brackets can be used above and adjacent to slatwall on Montage panels.

Horizontal off-module brackets can be used with a panel stacker on Montage panels. Follow standard panel stacker guidelines for each panel.

Enhanced off-module Montage frames have horizontal slot patterns and must be specified for horizontal off-module Montage configurations.

Horizontal off-module brackets push bin out from panel 5/8" on enhanced off-module Montage panels.

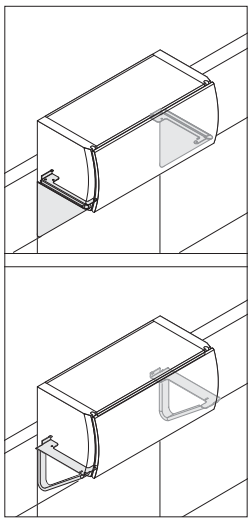

Horizontal off-module brackets cannot span a vertical or joint where two frames come together on enhanced off-module Montage panels. Shift the bin to avoid the joint.

Only two pairs of off-module brackets and associated storage can be mounted per frame.

Upmount Brackets

Basic and open design upmount brackets, optional, attach bins and shelves near the top of 54"H panels.
Tip: Stationary shelf cannot hang from an upmounted bin or shelf.

Upmount brackets, optional, can be used with universal sliding door, universal over the case, and universal in the case bins. Brackets attach bins near the top of 54"H panels. TS Series bins and universal shelves cannot be attached to upmount brackets.

Upmounted bin height is 66"H when installed on 54"H panels. For Montage, the overall upmounted bin height is 68⅝" when installed on a 55"H frame.

Upmount bin width must match the width of the panel or panels that it attaches to. Upmounted bins and shelves cannot be supported off-module.

Upmount brackets can be used above and adjacent to slatwall on Answer and Montage panels.

Upmount brackets can be used with a panel stacker on Answer, Kick, and Montage panels. Follow standard panel stacker guidelines for each panel.

Omit Brackets

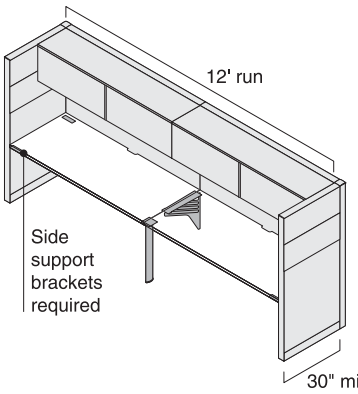

Omit brackets option must be specified when bin is being used in hutch kit, or when attaching bin to a horizontal wall attachment bracket. Order hutch kit separately.

Hutch kit supports bin at 66" height.

Application Rules for Overhead Storage on Answer and Kick Panels

For complete panel specific stability guidelines, see the corresponding panel specification guide.

Answer Panel

Guidelines for Universal Bins. Applies to universal sliding door bin or universal in the case bin on Answer and Kick panels.

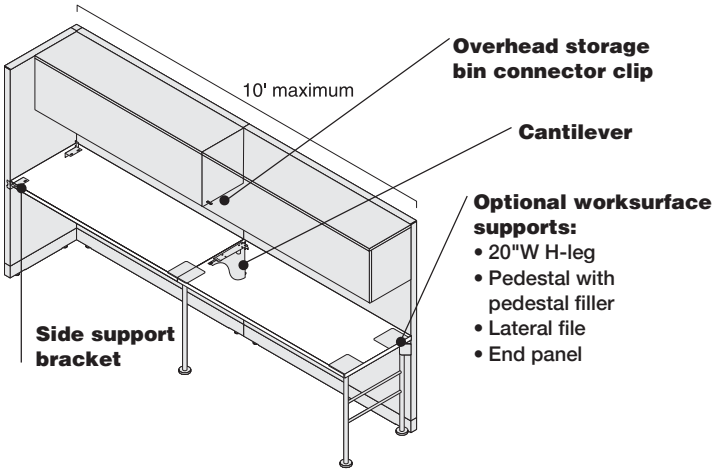

The following application restrictions must be complied with when hanging universal overhead bins on Answer and Kick panels. Otherwise, standard Answer and Kick application guidelines apply.

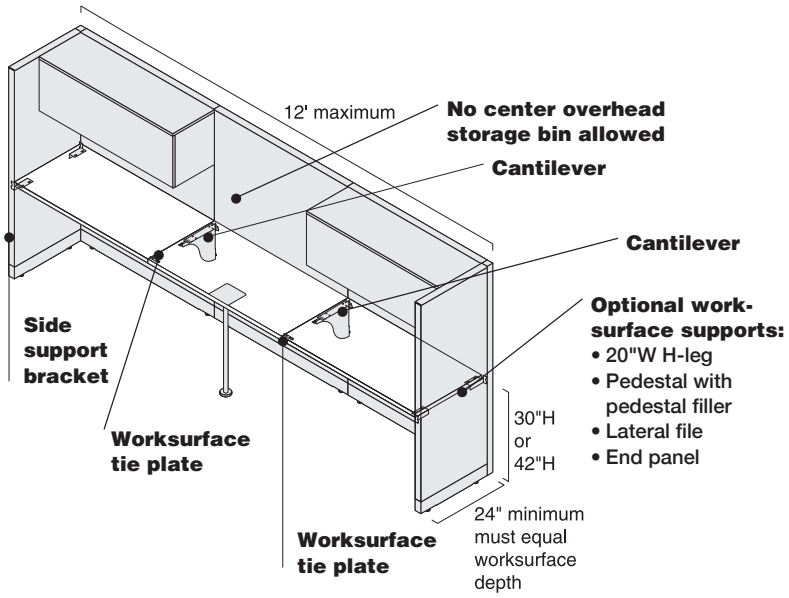

- Universal sliding door bin, universal in the case bins, and universal curved front bins cannot hang on an Answer or Kick panel above the 66"H connection point.
- The maximum panel run length when using a universal overhead bin on Answer or Kick panels is 12'.
- Top of bins and shelves are not designed to support the weight of a seated person. Bins and shelves may be mounted at 38"H or lower only if another panel-mounted component prevents it from being seated upon.
- When ganging binder bins, the use of a tie plate is required.

⚠WARNING

Failure to comply to these guidelines may result in personal injury.

Kick Panel

Universal One-High, 1.5-High, and Two Drawer Lateral Files

One-High and Two Drawer lateral files serve a dual purpose as high-density storage and as an inviting space for guests.
Tip: Using Universal laminate enhanced storage with Universal steel storage is not recommended.

Tip: FrameOne feet and c:scape glides will be field installed.

Lock is standard on lateral files and is located at top left corner of drawer. Locks are standard factory-installed, keyed random.
▶*Lock and Keying*, page 442

Pulls on flush-front lateral files are full width and integral.

Pulls on proud-front lateral files are available in a variety of shapes.

Top is standard 1"H steel on units with steel fronts and standard 1 3/16"H wood veneer on units with wood fronts. Other top options are available.

Drawer fronts are available in steel, laminate, or wood veneer.

Leveling glides adjust up to 3/4" for universal 3" base and up to 1" for c:scape glide and FrameOne foot base to install lateral file on uneven floors.

Drawers are standard 12"H and open full depth for total access to the contents.

▶Page 351

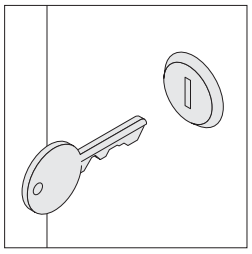

Rails accommodate front-to-back filing of letter-, A4 international-, and legal-size hanging folders. Rail packages accommodate two rows of letter-size files in 30"W and 36"W drawers and three rows of letter-size files in 42"W drawers. See *Storage Capacities* for additional details. Additional rails are available and must be specified separately.
▶For interior dimensions, see page 450

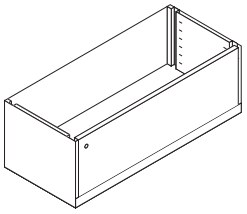

Dividers accommodate side-to-side filing of expandable folders and other objects. Divider packages include three dividers per drawer, 12"H file drawers also include one hanging folder bar per drawer. Additional dividers are available and must be specified separately.
▶Page 352

Safety interlock system allows only one drawer to be opened at a time.

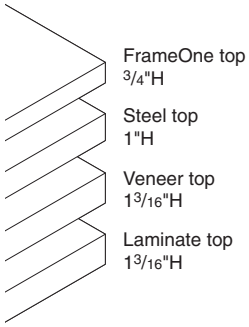

Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.
▶*Lock and Keying*, page 442

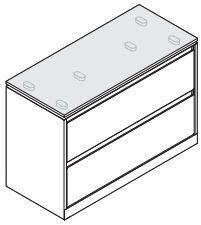

Individual drawer locks are available as an option for an application that would limit access to each drawer. Lateral files include a security shield between drawers to prevent unauthorized access. Individual locking drawers are only available with field -installed locks. Consecutive, specific, and random keying are available. Field-installed lock cylinders must be specified separately.
▶*Lock and Keying*, page 442

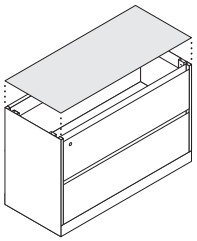

No-top lateral files are available for use with cushion top or beneath a common top shared among several lateral files. Hardware is included to attach case to worksurface. No-top option reduces height of file by 1".

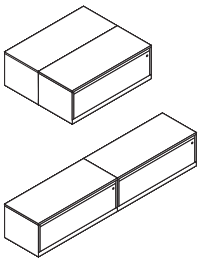

Laminate and wood veneer tops with square-edge profiles are available in place of standard 1"H steel tops. Laminate and wood veneer tops are 3/16" taller than steel tops and will add that dimension to the overall height of the lateral file.

FrameOne top matches the height of a FrameOne bench. A 3/4"H wood or laminate top floats above a painted steel security top using six black plastic spacers. FrameOne top can be specified on 28"H files only, making the overall height 28 1/2"H.

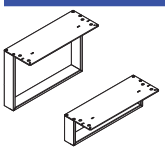

Security top is available as an option for installations where the file will be installed beneath a worksurface, but not physically attached. Thin steel top prevents unauthorized access to the contents of the cabinet. Security top is not structural and can be specified on 28"H files only. Security top reduces overall height of file to approximately 27"H.

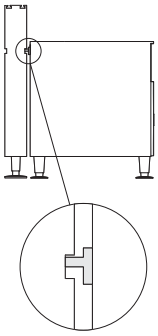

Ganging hardware is included to provide alignment by joining adjacent components side-by-side, back-to-back, or both.

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

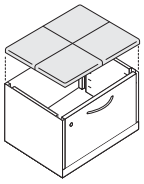

Connections

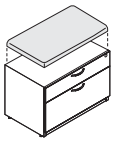

Intermediate support is used with Universal One-High or 1.5-High storage as a worksurface support allowing for nesting of low storage.
▶Page 279

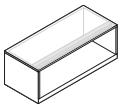

c:scape beam tether bracket connects One-High and 1.5-High storage to provide added stability to the c:scape beam.

Application Topics

Application: Ology left

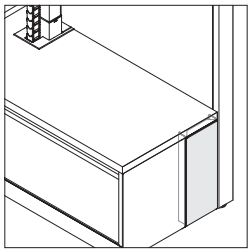

Application: Ology right

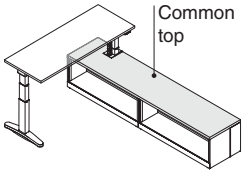

Application is determined by which leg of the Ology desk is located inside the storage.

Shroud is used to finish off the back of the storage when application is used as stand-alone unit.

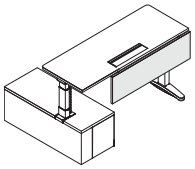

Filler is used in end-of-run applications where end of storage unit will be visible.

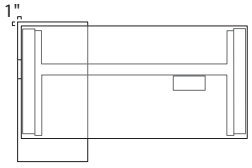

No top option on lateral file is available for use with a common top shared with an adjacent lateral.

Common top for Ology applications, ordered separately, is available in laminate or veneer. Cut-out for Ology leg is available on the left side or the right side of the common top. Ology desk cannot be placed in the middle of the common top.

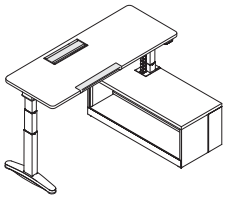

Ology modesty panel or fixed personal/ modesty screens must be undersized and justified to the outside when used with One-High storage unit.

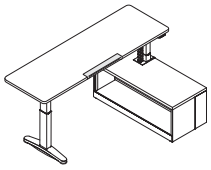

To help avoid pinch points, the Universal One-High open lateral for Ology application extends 1" past the back of the Ology worksurface.

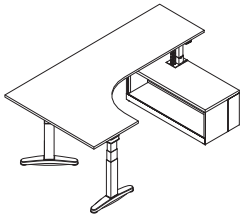

When used with One-High integrated storage, screens used in the modesty position must be a minimum of 18" shorter than worksurface width to allow for pinch point clearances.

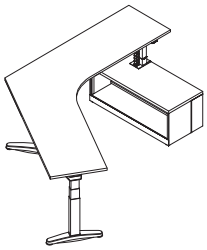

Soft edge and power and data access door can be positioned left or right on Ology desks that are 64"W or wider for use with One-High integrated storage.

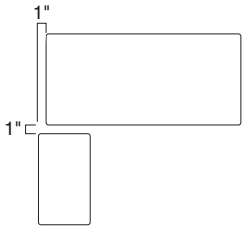

Worksurface overhang can be positioned left or right on desks that are 70" wide or wider.

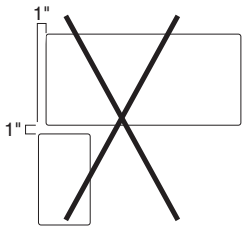

Ology 90° corners that are 70" wide and wider can be used with One-High storage unit.

Ology 120° corners that are 52" wide and wider can be used with One-High storage unit.

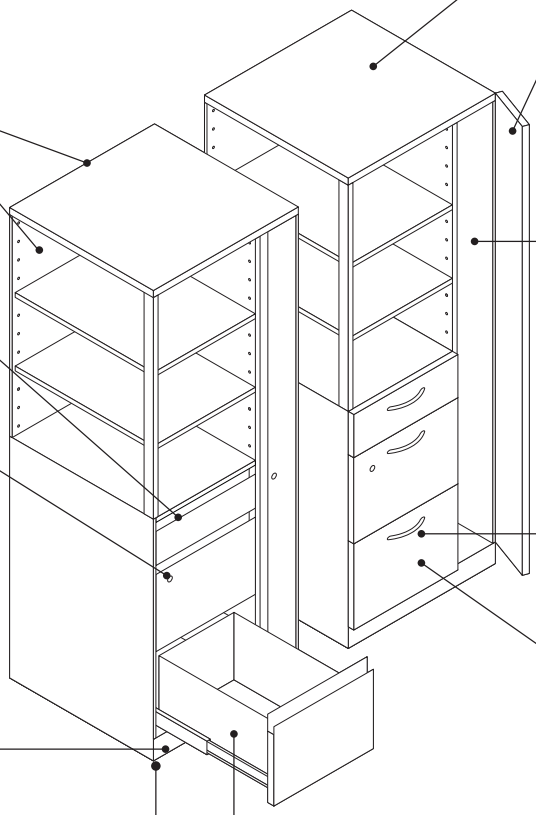

When specifying One-High storage that matches the worksurface depth, only One-High storage should be placed adjacent to the desk.

Pinch point clearances are not maintained when 1.5-High or taller storage is used adjacent to One-High integrated storage that matches the worksurface depth.

Drawer lock in dual door tower, full front tower, vertical drawer tower, and workstation vertical tower is located approximately 36" from the floor and also secures the lift-up door on 65½"H units.

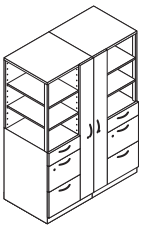

Individual drawer locks are available as an option on workstation verticals for applications where you want to limit access to each drawer. Workstation verticals include a security shield above each drawer to prevent unauthorized access. In 65½"H towers, the lift-up door is controlled by the lock in the drawer directly below. Individual locking drawers are only available with field-installed locks. Consecutive, specific, and random keying options are available. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.
▶*Lock and Keying*, page 442
Exception: Individual drawer locks are not available on towers with 6"H drawers.

Laminate and wood veneer tops with square-edge profiles are available in place of standard 1"H steel tops. Laminate and wood veneer tops are 3/16" taller than steel tops and will add that dimension to the overall height of the tower.

Ganging hardware is included to provide alignment by joining adjacent components side-by-side, back-to-back, or both.

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

Underworksurface Lateral File Fillers

▶Specifying, page 358

Product Details

Lateral file filler can be used in applications where a 27"H lateral file or storage cabinet with no top is used underneath a worksurface. Filler conceals the gap between the face of a panel and the back of the lateral file or storage cabinet. Filler connects to the panel to provide stability for configurations that are not panel-wrapped; use the same application rules as a pedestal with filler. Fillers are available for use with proud-front or flush-front lateral files or storage cabinets with a Universal 3" base only.

24"D filler is used with 18"D storage. 30"D filler is used with 18"D or 24"D storage. Order filler to match nominal depth of worksurface.

Connections

Lateral file fillers can be used with the following:
- Answer panels
- turnstone Kick panels
- turnstone Kick worksurfaces
- Universal Systems worksurfaces
- Answer worksurfaces

Product Details

Two cap mount brackets are available in *Answer Solutions Specification Guide* for use with Universal laminate enhanced overheads and organizers.
▶See *Stability Guidelines* in *Answer Solutions Specification Guide.*

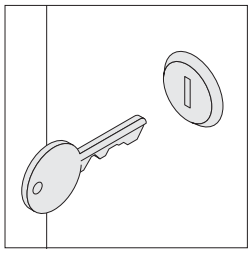

Omit brackets option must be specified when overhead is being used between two towers, with FrameOne stanchions or top cap mounted on Answer, or when attaching overhead to a horizontal wall attachment bracket.

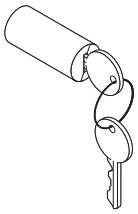

Universal laminate overheads may be mounted at 38"H or lower if another panel-mounted component prevents it from being seated upon.

Overhead laminate storage height accepts standard and A4 binders.

Organizers are available personal or shared. Personal provides storage on one side only. Shared storage is divided down the center, with half storage on one side and half storage on the opposite side. Personal storage has a center divider.

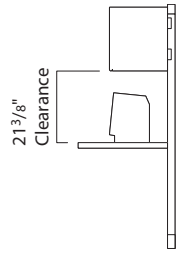

Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only.

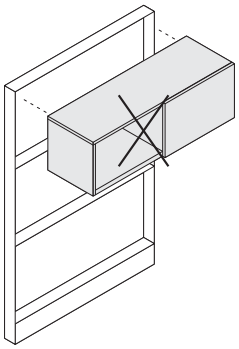

Optional field-installed locks are available with consecutive, specific, and random keying options. Field-installed lock cylinders, LOCKPB9201FR or LOCKPB9250FR, must be specified separately. Answer Beam Application
▶See *Answer Beam and Answer Fence Specification Guide.*

Standard width overheads and organizers are on module to align with Answer beam widths and should be used in parallel application with the beam.

Overheads and organizers for perpendicular application are intended for use only with Answer beam. They are wider than module width to accommodate the width of the beam and remain on module with storage below.

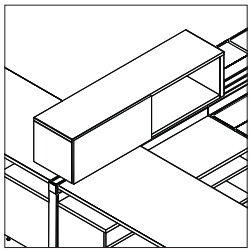

In all Answer beam applications where overhead or organizer are being mounted on Answer beam, select the "no bracket" option. Mid-storage support and stanchion kits for mounting with Answer beam must be ordered separately.
▶See *Answer Beam and Answer Fence Specification Guide.*

Units for single-sided perpendicular application are dimensioned 3" wider than module width to fully overlap the beam and align with on-module storage on the other end.
Tip: Units for single-sided perpendicular application should only be used with Answer beam.

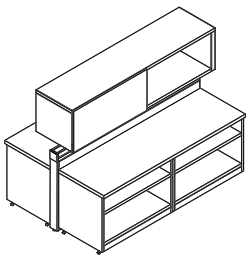

Units for dual-sided perpendicular application are dimensioned 1½" wider than module width to partially overlap the beam.
Tip: Units for dual-sided perpendicular application should only be used with Answer beam.

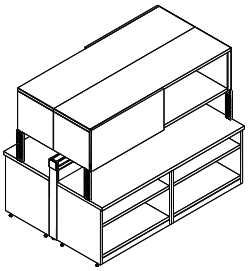

Units for parallel application are on module width and can be used anywhere along a beam.

Low storage or credenzas used to support one end of overheads or organizers must be connected to Answer beam using storage-to-beam connector.
▶See *Answer Beam and Answer Fence Specification Guide.*

When overheads are placed side-by-side in parallel application to Answer beam, it is recommended that the units be ganged. TSBAWAK is the style number for the ganging bracket to use for low and mid-storage in beam applications.
▶See *Answer Beam and Answer Fence Specification Guide.*

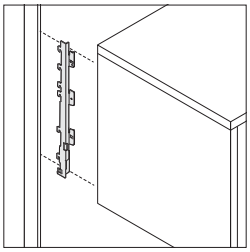

Shared storage in parallel application should always be centered over the beam.

Personal storage in parallel application can be used back-to-back.
Tip: Use centered stanchions and mid-storage supports to support the front edge of overhead units.

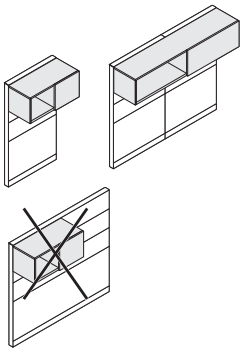

Overheads and organizers in parallel applications must not extend past end of beam.
Tip: Beam-mounted storage is not allowed in freestanding beam configurations.
▶See *Answer Beam and Answer Fence Specification Guide.*

Connections

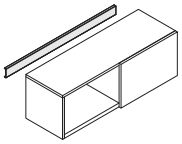

On-module attachment brackets are used to mount overheads on panels of the same width as overheads and are available as an option.

Safety catch locks overhead storage unit to frame to prevent accidental removal.

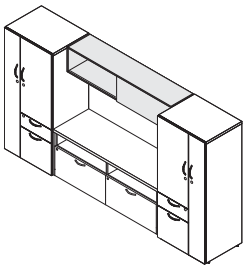

Width of overhead must match the width of the panel or panels that it is attached to when using an on-module bracket. Overhead may span up to two frames.

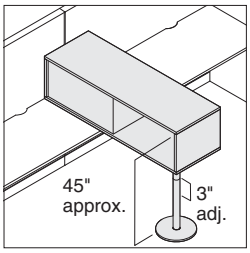

Horizontal wall attachment brackets are available to attach overhead storage to wall of building.

Laminate overheads and organizers up to 48"W can attach on-module to Answer panels. Sizes larger than 48"W cannot be panel mounted. Follow the Answer panel stability rules.

Tip: End-mount brackets are not available for use with Answer panels.
▶See *Answer Solutions Specification Guide.*

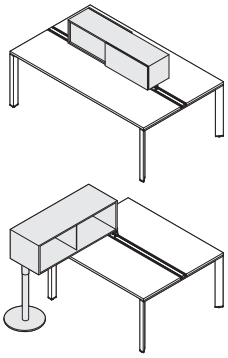

Laminate overheads and organizers can be attached to a structural wall, suspended between towers, or supported by a tower.

Column height at shortest level is 29⅞"H. Column will then adjust upward 3" for leveling. Height from floor to top of box is approximately 45".

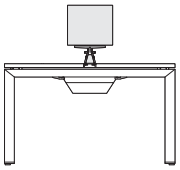

Overhead cabinets can attach so they align with tower, vertical cabinet, and panel heights.

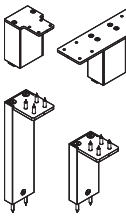

Overhead cabinets and organizer shelves for FrameOne may be used in parallel and perpendicular applications. Brackets are ordered separately.

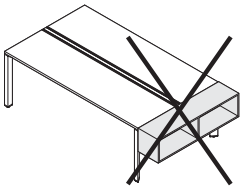

When used in parallel applications for FrameOne, storage attaches to the top of the integrated rail in infinite locations. Storage can span over a dual-sided base and extension.

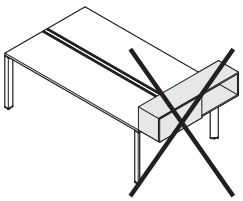

Storage is always centered on the dual-sided bench when used in parallel application.

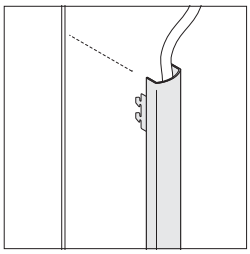

When ganging storage units together for Answer beam application, use ganging bracket AWAK. When ganging overheads and organizers for Answer beam application, use ganging bracket TSBAWAK. Use mid storage supports or stanchion supports when mounting overheads and organizers for Answer beam applications.
▶See *Answer Beam and Answer Fence Specification Guide.*

Universal laminate enhanced overheads and organizers cannot be used as end counter storage on FrameOne.

Directional Laminate and Edge Profile Detail

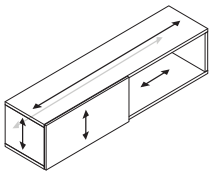

The appearance of laminate may change slightly depending on the angle from which it is viewed. This natural phenomenon is called polarization, and it can be seen on natural veneer, and to a lesser extent on composite veneer. Polarization is often noticed on worksurfaces installed at a 90° angle with each other. Please refer to the following illustrations for an understanding of grain direction on your installation.

900 Series Lateral Files

900 Series lateral files are ideal for high-density paper storage.
▶Specifying, page 400

Top is standard 1"H steel. Other top options are available.

Finished back is standard.

Lock is standard on lateral files and secures all drawers and lift-up door. On 52"H and 65½"H files, lock is located at top left corner of drawer that is third from the bottom. On 28"H and 40"H files, lock is located at top left corner of top drawer. Locks are standard factory-installed, keyed random.
▶*Lock and Keying*, page 442

Drawers open their full depth for total access to the contents and are standard 12"H. 900 Series drawers and lift-up doors have flush fronts.

Base is 3"H and is integral to the case.

Leveling glides adjust up to ⅞" to install lateral files on uneven floors.

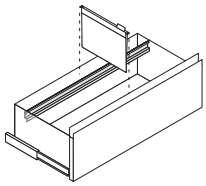

Label holders are included with each drawer. Label holder fits inside the integral pull or can be affixed to the front of the drawer or door. Perforated labels are included and can be created using the template available on www.steelcase.com/label.

Pulls on 900 Series drawers and lift-up doors are full width and integral. They complement Universal Storage flush front products. Pulls are located at the top of a drawer and at the bottom of a lift-up door.

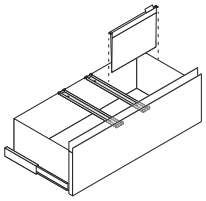

Actual Dimensions

Depth	18"
Width	30", 36", and 42"
Height	28", 40", 52", and 65½"

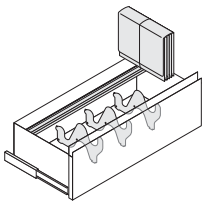

Product Details

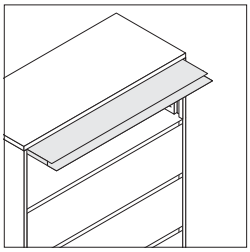

Drawer interiors include one hanging folder bar per drawer, which accommodates side-to-side filing of letter-, A4 international-, and legal-size hanging folders. Alternative interiors are available as options; your specification will apply to all the drawers within a single lateral file. Additional bars are available and must be specified separately.
▶Page 351

Rails accommodate front-to-back filing of letter-, A4 international-, and legal-size hanging folders. Rail packages accommodate two rows of letter-size files in 30"W and 36"W drawers and three rows of letter-size files in 42"W drawers. See *Storage Capacities* for additional details. Additional rails are available and must be specified separately.
▶Page 352

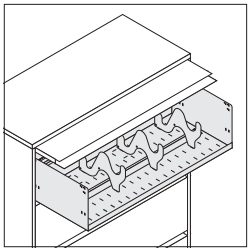

Dividers accommodate side-to-side filing of expandable folders and other objects. Divider packages include three dividers and one hanging folder bar per drawer. Additional dividers are available and must be specified separately.
▶Page 352

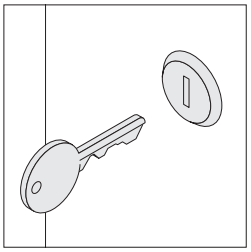

Lift-up door with fixed shelf is standard in the top position of 65½"H cases. Door is 13½"H to accommodate standard-height binders. Door recesses inside the case.

Lift-up door is available with an optional roll-out shelf in place of the standard fixed shelf.

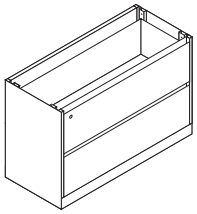

Roll-out shelf includes three dividers and one hanging file folder bar to function as a backstop.

Safety interlock system allows only one drawer or roll-out shelf to be opened at a time.

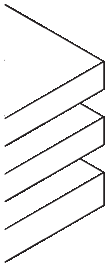

Locks are available factory- or field-installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.
▶*Lock and Keying*, page 442

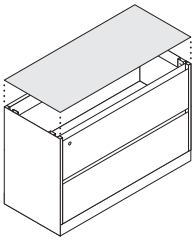

Individual drawer locks are available as an option for applications where you want to limit access to each drawer. Lateral files include a security shield above each drawer to prevent unauthorized access. In 65½"H cases, the lock in the drawer below controls the lift-up door in the top position. Individual locking drawers are only available with field-installed locks. Consecutive, specific, and random keying options are available. Field-installed lock cylinders must be specified separately.
▶*Lock and Keying*, page 442

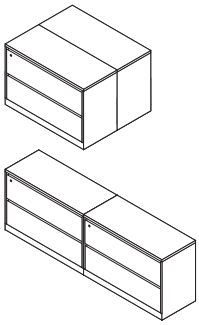

No-top lateral files are available for installations where cases will be installed under a worksurface or beneath a common top shared among several lateral files. Hardware is included to attach case to worksurface. No-top option reduces height of file by 1".

Laminate and wood veneer tops with square-edge profiles are available in place of standard 1"H steel tops. Laminate and wood veneer tops are 3/16" taller than steel tops and will add that dimension to the overall height of the lateral file.

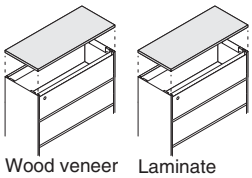

Security top is available as an option for installations where the file will be installed beneath a worksurface, but not physically attached. Thin steel top prevents unauthorized access to the contents of the cabinet. Security top is not structural and can be specified on 28"H files only. Security top reduces overall height of file to approximately 27"H.

Ganging hardware is included to provide alignment by joining adjacent components side-by-side, back-to-back, or both.

Counterweight packages are required to ensure product stability and are ordered as an option or separately. Product specification pages indicate the correct counterweight package for each style number and any exceptions where counterweights are not required.

The programming key and manager key are required if the keyless option is selected on the personal console.

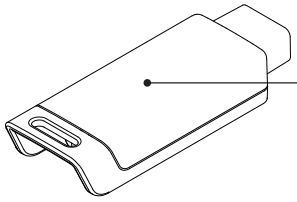

▶Specifying, page 409

The programming key is used during installation to program the lock out of the factory setting and into the shared setting. It is also used to pair the manager key to the lock. The shared setting is intended for open spaces where multiple users may be utilizing that space throughout the day. The assigned setting is intended for owned spaces where only one user will have access to the locking unit.

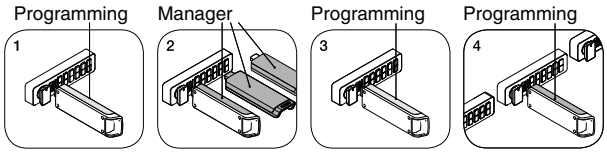

The manager key is used to override the lock when a passcode is forgotten or the battery loses power. The manager key can be paired at any time. One manager key may be paired to infinite locks; however, each lock may only pair with up to six manager keys.

The user key is ADA compliant and is available for users that require additional assistance in operating the keypad on the lock.

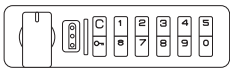

How to Program

1. Insert the programming key. A two-toned beep will be heard and the LED light will start to flash.
2. While the LED light is flashing, insert one manager key at a time. A beep will be heard for each manager key that is programmed.
3. Insert the programming key. A two-toned beep will be heard and the LED light will stop flashing.
4. Repeat previous steps for each lock.

Tip: The locks will arrive in the factory setting. During the process of pairing the manager key(s), the locks will be programmed into the shared setting.

Product Details

The lock is metal and contains a CR2032 battery.

The lock battery is accessed from the bottom of the lock unit. The battery may be removed and replaced if necessary. A philips screw driver (cheese head M2x4) is required to remove the two screws.

Lamp life of a fluorescent lamp that turns on and off once a day will last longer than a lamp that turns on and off many times a day. Environmental effects can shorten the life of a lamp, such as: moisture or higher humidity, higher or colder than normal temperatures, excessive vibration, and power surges.
Tip: If the light begins to flicker, or shuts down immediately, the sensor is indicating the lamp is at the end of its life and needs to be replaced.

Worksurface front

Daisy Chaining

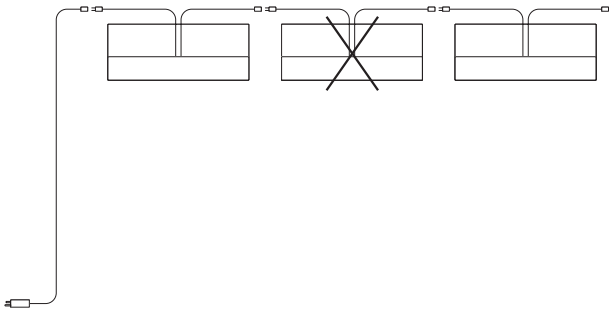

For Standard, Utility2, and Bottomline Lights

Daisy chaining shelf lights together extends power from one fixture to another within workstations to help keep receptacles clear for other uses.

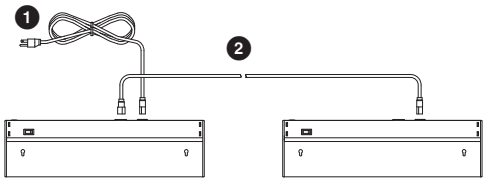

For Standard shelf lights, starter cord is required with daisy chain cords to bring power to the first shelf light in a daisy chain so there's no need to designate where each fixture will be used within the chain.

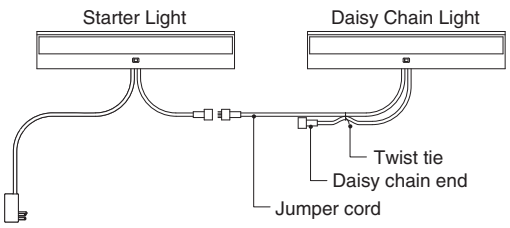

Power will not be interrupted in a chain even if one of the shelf lights is turned off or its lamp has burned out. That's because the path of power through the chain doesn't pass through the lamps or switches.

For Utility2 lights, connect the power cord ❶ between the first light and the wall receptacle. Connect the jumper cord ❷ between the lights. Maximum distance betweeen receptacles for 78" jumper is 74".
Tip: Connect up to 10 fixtures maximum. Voltage and current rating of fixture is 120 volt, .75 amps.
Starter light is required with daisy chain lights to bring power to the first light in the daisy chain.

For Bottomline lights, starter light is required with daisy chain lights to bring power to the first light in the daisy chain.

Tip: Daisy chaining is not allowed in Chicago. Local electrical codes vary, so you should consult a qualified electrical contractor or engineer for proper installation of all electrical equipment.

Tip: Overhead cabinets and shelves provide a recessed area for shelf lights. They are not designed to conceal cords when daisy chaining.

Tip: When using upmount brackets with overhead storage and daisy chaining lights, use the open design upmount bracket for better cord management.

TS Series Laminate Common Shelves

Tip: For anticipated heavy loads on 42" and 48"W laminate common shelves, a field-installed reinforcing channel (TSATRC39) can be used.

Tip: Standard shelves are 1⅛" thick. However, the actual thickness between Low-Pressure Laminate (LPL) and High-Pressure Laminate (HPL) shelves is slightly different. It is recommended that only shelves of the same type are specified in a given application. In addition, there may be sheen or texture differences when using LPL and HPL in adjacent applications. Please use caution when mixing and matching different shelves types.

Tip: Width includes dimension of laminate common shelf and support brackets. Laminate shelf is undersized by ½" to accommodate two support bracket mounting orientations.

For laminate price group 2 pricing, *please refer to the electronic catalog or Smart Tools.*

Open Line Laminate (OLL)

This service allows you to order non-standard laminate at an additional processing fee of $74 U.S. per unit, plus the cost of the laminate.

High-Pressure Laminate pricing does not include premium or digitally printed patterns from any suppliers. Laminate cost may also vary for basic or standard laminates from other suppliers. Please contact the OLL consultant at 616.475.2426 for pricing. The cost of the laminate will be added to your invoice as a separate line on the acknowledgement.

When processing orders for Open Line laminate on Universal worksurfaces and Universal Storage tops, specify 2900 in the laminate finish field and enter the OLL manufacturer information. Enter the required edge finish as you would a standard laminate.

- TS 200 Series tops

Tip: Wood is not offered as a finish on the value package for High-Density storage cases.

Steelcase carefully selects veneer and solid wood for consistent color and grain structure. Wood is a natural material and variations will occur in color, grain and texture. These variations are part of the inherent natural beauty of wood and are not considered defects.

All wood products will darken with age and exposure to ultraviolet light. This is especially apparent with cherry and maple veneer. We recommend that desk accessories be rearranged periodically to ensure even aging of wood surfaces.

When storing your wood furniture, please follow the following guidelines:

- Do not store products in trailers
- Store products in areas that simulate office temperatures (60°F to 90°F)
- Store products in areas that maintain constant, office-like humidity levels
- Keep product away from light. Cover products to make sure they are not exposed to light.

Veneer

Veneers are matched for proper balance and consistency. Veneers are available flat cut or quarter cut, except for Oak, which is rift cut. Refer to the *Surface Materials Reference Manual* for descriptions of each cut.

Open-pore finish is a medium gloss finish that leaves the wood grain texture visible to the eye and distinguishable to the touch.

▶ See *Surface Materials Reference Manual* for a listing of available veneers for Victor2.

Premium Veneers

A selection of Premium veneers in this collection are available on most Steelcase brand products. The collection will be available as close to standard leadtimes as possible. However, because adequate supplies of veneer and solids must be secured, all orders will be scheduled individually. Leadtimes will vary based on Premium veneer and Premium solids availability at the time the order is placed. The collection is Graded-In as Wood Group 2 and Wood Group 3, and supported like standard veneers to make ordering easy. Please see the Steelcase surface materials section on *village.steelcase.com* for sample information and product line availability. All premium veneers are in clear-coat.

Composite Veneer
Composite veneers are an engineered wood intended to create specific grain patterns and characteristics. They are pre-stained and finished with Steelcase's Clarity water-borne UV topcoat, which protects the environment while providing durability and clarity. Only open-pore finishes are available on composite wood. Composite veneer and matching edge bands are available on most Steelcase brand products. Composites, for use as a solid nosing substitute, are not available. Steelcase does not recommend mixing composite veneers with natural solid nosings because composite and natural wood grain and color matching are rarely compatible. Composite veneers are Graded-In as Wood Group 1 pricing.

Custom Surfaces

Customiz stain is a service that allows you to create your own stain colors and finishes on standard veneer. Customiz stain color is available on all product lines that offer wood veneer.

A $500 stain-matching fee applies on CUSTOMIZ requests (Exception: The $500 fee does not apply on matches to Coalesse standard finishes or for a low-gloss finish request on a standard color). The $500 fee covers the cost of formulating the Customiz color finish and applies regardless of whether or not an order for product is placed.
In addition, an approval form must be signed to indicate customer acceptance of Customiz match. A $1,500 initiation fee will be charged prior to first order entry. This initiation fee activates the finish for unlimited use on any Steelcase product for an 18 month time period. After the 18 month time period has lapsed, the Customiz finish may be reactivated for another 18 months for a $1,000 fee at any point within five years after the $1,500 initiation fee was paid. If the finish is not reactivated within five years after the $1,500 initiation fee was paid, the finish will be culled and the customer will need to pay the $1,500 initiation fee again. All style number related Customiz charges products are no cost as of April 2014. The matching and initiation fees are not discountable.

Customiz stain takes 10 days to formulate. Consult the *Surface Materials Reference Manual* for more information. Custom veneers are also available and must be quoted by Steelcase specials group. Customiz stain on custom veneers takes 2 to 4 weeks to formulate.

Requirements and information on ordering a Customiz stain color are found in the *Surface Materials Reference Manual.*

Lock and Keying Options

Universal Laminate Enhanced Storage

All locking products are standard with factory-installed, keyed-random locks. Consecutive, specific, and random keying are available as field-installed options.

Locks consist of a factory- or field-installed lock cylinder and a factory-installed lock face ring.

Factory-Installed Keying

Factory-installed locks are always key random (standard) or master key random (option). Key random means that the locks will be assigned arbitrarily at the factory with key numbers ranging from FR305 to FR454 (Master keying numbers: XF1001 to XF1150). All locks within a unit will be keyed alike.

Tip: Random keying can mean that different furniture units will have the same key number. If you must have all locks keyed differently, you should specify field-installed, key specific or key consecutive lock cylinders.

▶See below.

Field-Installed Keying

Field-installed locks are only available on products that include factory-installed lock mechanisms.

Order storage with standard key-random locks.
Tip: For products with optional lock colors, make sure to specify the color for both the lock and lock face ring.

Front-removable lock cylinders for field-installation must be specified as a separate purchase order line item. Order LOCKPB9201FR or LOCKPB9250FR for Universal laminate enhanced storage. This line item will trigger the factory to omit lock cylinders from all Universal laminate enhanced storage products.

Lock tool allows for the removal of lock cylinders.

Lock cylinders will be shipped separately so that you can install the locks when you are ready.

Three keying choices are available for field installation—random (standard), specific, and consecutive.

Universal Steel Storage, TS Series Storage, High-Density Storage, TS 200 Series Lateral Files, 900 Series Storage, and Overfile Cabinets

All locking products are standard with factory-installed, keyed-random locks. Consecutive, specific, and random keying are available as field-installed options.

Exceptions: Individual locking drawers are only available with field-installed locks. Overfiles are only available with factory-installed locks.

Locks consist of a factory- or field-installed lock cylinder and a factory-installed lock face ring.

Two types of locks are available—the standard keying system (FR series) and the master keying system (XF series). All the locks in the XF series can be opened with a single master key.

Factory-Installed Keying

Factory-installed locks are always key random (standard) or master key random (option). Key random means that the locks will be assigned arbitrarily at the factory with key numbers ranging from FR305 to FR454 (Master keying numbers: XF1001 to XF1150). All locks within a unit will be keyed alike.

Field-installed locks are only available on products that include factory-installed lock mechanisms.
Exception: Overfiles are only available with factory-installed locks.

Specify "plug" when specifying furniture, and the product will ship with a plastic plug in place of the lock cylinder.
Tip: For products with optional lock colors, make sure to specify the color for both the lock and lock face ring.

Front-removable lock cylinders must be specified separately. You must also order a special lock tool to install or remove lock cylinders in the field.
Tip: Lock tools are reusable. You do not need to order additional lock tools with every furniture order.

Lock cylinders will be shipped separately so that you can install the locks when you are ready.
