Product Details

Embold is a family of seating that encompasses a variety of seating needs and configurations.

Chair frames are available as solid maple wood or painted metal.

Plastic, solid maple wood, and solid surface arm caps are available on wood or metal chair frames.

Two arm cap shapes are available to specify—overhang and no overhang.

Overhang arm caps

have an intentional handed overhang designed to help users grip the chair during ingress and egress. Overhang arms are recommended for use in clinical areas.

Tip: Solid surface overhang arm caps have a slightly different aesthetic than the solid maple or plastic arms and are non-handed for both styles.

No overhang arm caps have a sleek minimal profile.

Space between seat and back allows for easy cleaning along the entire back.

Curved back design supports multiple seating postures and offers comprehensive back support.

Back has a gentle flex for comfort.

The back can be specified with one upholstery or contrasting (multiple) upholsteries. Contrasting back upholsteries can be specified for the upper and lower back or the inner and outer back. 66"W and 88"W multiple seat units have a vertical center seam on the back.

Tip: Only one color scheme can be selected for the back. All backs have center horizontal seam and zipper.

Monolithic back color scheme should be selected when choosing one upholstery for the entire back.

Contrasting upper back and lower back color scheme should be selected when choosing contrasting upholsteries for the upper and lower back.

Contrasting inner back and outer back color scheme should be selected when choosing contrasting upholsteries for the inner back and outer back.

No scheme can be selected for seat, as it is only available in one upholstery.

Fabrics with a repeating pattern will not remain aligned between the curved corners (inner or outer corner) and the top outer edges of the chair. Misalignment can also occur around the vertical center seam on multiple seating units.

Optional high back can be added to provide additional upper back support. High back is available on the single seat 21"W and 32"W seats, and on the easy access 21"W and 32"W seats. The high back adds approximately 9" to the height of the chair.

High back will have attachment bracket centered on the back of 21"W chairs. There are two attachment brackets on the back of 32"W chairs. Bracket comes with bracket cover and its finish is specifiable. High back can be ordered retroactively and installed in the field but cannot be removed without damaging chair upholstery.

Multiple seating units can be configured in various ways to create different seat widths by adding or removing midarms.

Midarms can be added to loveseats and multiple seating units to designate seats. Midarms also create different seat width configurations. Midarms attach to the under seat structure and fit through the crumbsweep between the back and seat. Midarm can be specified separately to be retrofitted in the field for a new configuration. Moving or removing a midarm cannot be done without tools. Refer to installation instructions.

Midarms can only be specified in the center on loveseats. Multiple seat units can have midarms specified in a variety of positions. **► For better understanding of possible arm configurations, please see Embold Configurations on page 76.**

Arm caps for midarms are available in plastic, solid maple wood, and solid surface. Midarm caps are available with or without an overhang and are non-handed for both styles.

Midarm overhang arm caps have an overhang on both sides.

Midarms are upholstered and are specified separately from the seat. Midarms rest on the top of seat upholstery and do not puncture or damage seat upholstery.

Minimum midleg placement is dependent on seating configuration. Midlegs are required every 44"W on multiple seat units. Two midlegs are required for an 88"W multiple seat unit without any midarms. All configurations on an 88"W multiple seat combination unit (**HSBM88C**) requires two midlegs, which come standard.

Midleg is only available in the center position on the loveseat and is not needed for structural support.

Midlegs can be added for aesthetic purposes in some applications.

Midleg can be specified separately to be retrofitted in the field for reconfiguration. Moving or removing a midleg cannot be done without tools. *Tip: Support plates, midarms, and midlegs should be ordered as options when specifying the seating units, but would need to be ordered separately for future reconfigurations in the field.*

Footrest is standard on the easy access chairs and is located on the front and back of the chair. Footrest is anodized aluminum.

Embold, continued

Moisture barrier is available as an option on the seat only.

Non-marring, black plastic glides are standard on both wood and metal chairs.

Adjustable glides are standard on legs. Optional wallsaver glides are available. Glides are interchangeable and can be retrofitted in the field. Wallsaver and standard glide options are available on midlegs as well as standard chair legs.

Standard Adjustable Glide

Wallsaver Glide

Tip: When specified on seating, wallsaver glides will be applied to the rear legs and standard glides will be applied to the front legs.

Midlegs are required every 44" on multiple seat units. All 66"W and 88"W multiple seating units require at least one midleg. A minimum of one midleg is needed for multiple seat units with one midarm. Midleg matches design profile of standard legs and has a black plastic glide.

Support plates may need to be added or removed for future reconfiguration of midarms or midlegs in the field.

Product Details

Midarms can be added to multiple seating units to divide the seat into various sizes. Midarms can be added to existing Embold loveseat and multiple seating units for further seat definition. Moving or removing a midarm cannot be done without tools. Adding midarms to an existing product may require ordering an additional support plate for attachment to the seating unit. Midarms can only be added to certain locations on loveseats and multiple seating units.

▶ See *Embold Configurations* on page 76 for further information on how to configure seating with a midarm.

Arm caps for midarm are available in plastic, solid maple wood, and solid surface. Midarm caps are available with or without an overhang. Both midarm cap styles are non-handed. Embold Configurations

For Loveseat and Multiple Seating Units

Embold offers flexibility through midarms and midlegs on loveseats and multiple seat units. Midarms and midlegs allow for organizations to reconfigure these units over time to serve new needs. Midlegs are required every 44" on multiple units, so configurations must always include one leg for structural support with the exception of an 88"W seat with no midarms. 88"W seat units with no midarms require two midlegs. Midarms are not required on any unit, but come standard on the multiple seat bariatric combination unit (**HSBM88C**). Some configurations may require additional support plates or midlegs to be ordered to support a new configuration.

Midarms allow for more prescriptive seating and can be specified on any loveseat or multiple seating unit. Additionally, a midarm can be specified separately and retrofitted on a loveseat or multiple seating unit.

Midarms and midlegs can also be reconfigured or removed to create new seating configurations.

Support plates may need to be added or removed for future reconfiguration of midarms or midlegs in the field.

Two arm cap shapes are available to specify—overhang and contour.

Overhang arm caps have an intentional overhang designed to help users grip the chair during ingress and egress. Overhang arm caps are recommended for use in clinical areas. Overhang arm caps are non-handed.

Contour arm caps follow the curvature of the chair frame, while providing a gripable and cleanable plastic surface.

Back and seat cushions are available in the same upholstery or contrasting upholstery. Contrasting upholstery is considered any two fabrics that are not identical (including same fabric in different finishes). To maximize yield and cost, utilize back and seat cushions in the same exact fabric.

Fabrics with a repeating pattern will not remain aligned between the curved corners (inner or outer corner) and the top outer edges of the chair back.

High back has minimal stitching in center of back to keep upholstery taut.

Seat cushion contains minimal waterfall seams to promote cleanability.

Loveseat seat cushion does not contain a vertical seam separating the two seats.

Moisture barrier is available as an option on the seat only.

Spherical glides are standard on legs and designed to help protect cove molding.

Regard Electrical Components

Distribution and Access

Regard is designed to support technology. Electrical needs can be solved in a variety of ways.

A modular power system is available to plug into the power strips. This system can be ordered as a complete kit for each frame size or built up as components if power is being daisy chained from one frame to another, or if two circuits must be specified.

Users can access power strips that are incorporated into the contour arms, in-line tables, and desk and booth cabinets, or mounted to the underside of the base frames. These power strips can be plugged into the building, hardwired, or plugged into the modular power system.

Power strips can be placed in worksurfaces, utility arms, and under the frame. They are powered by a modular system.

Power kits can be placed on the underside of the frame to collect and distribute power throughout the frame with one building interface. Modular harnesses are used to distribute power through the application.

Product Details

Power strips provide user access to outlets and are available in corded or hardwire option. Power strips are available in drop-in or frame mounted styles. Receptacle options available include standard power, tamper and spill resistant, hospital grade, and USB configurations. All corded options are available with OCP (over current protection) which is a requirement in California. *Tip: As installed, furnishings that feature integrated hospital grade receptacles do not meet Article 517 of the National Electric Code requirements for hospital grade furnishing. These furnishings are not intended to be used in general patient care areas or critical patient care areas.*

Corded power strip can plug into a modular receptacle kit or into a building receptacle. Connection must be accessible.

Corded power strips can also be plugged into a modular power system.

Corded power strips have a 6'L or 10'L cord and a 15-amp grounded plug. California requires over current protection on corded power strips.

Hardwire power strips are available for Chicago and other municipalities that may require it. They include 10' of flexible conduit. California does not require over current protection on hardwire power strips.

Corded and hardwire power strips can be mounted at any point along the underside of the frame.

Drop-in power strips are for use in the contour arm, in-line table, desk cabinet, and booth cabinet. California requires over current protection on drop-in power strips.

Drop-in power cut-outs must be specified to accommodate the drop-in power strips.

Power cords and harnesses can be managed under the frame. Cable ties are included with the harness and kit components. *Tip: Other wire clips and cord managers can be found in the Answer Solutions Specification Guide (32WCP, 999CHT, TS5LEGCLP).*

Modular power can either be specified in complete power kits or as a separate component to connect from one base to another, or when two circuits are needed.

Modular power can be mounted at any point along the underside of the frame.

When the Surround mobile tablet is installed on the frame, power cannot be mounted to the front edge of the frame. *Tip: Power strips are not recommended in middle of seat cushion.*

Modular power can be specified to accommodate multiple power strips.

Power kits collect and distribute power to power strips throughout the base frame using one building interface.

Power kits attach to steel frame with included brackets and face outward.

Modular harnesses are used to distribute power when power kits are used.

Modular harnesses are available to jump from one frame to another. Frames must be ganged together using style number **HS4FG** when jumping power between frames.

Modular harnesses are available in lengths from 12" to 42" to accommodate connection of power kits at different ends of the frame or to jump from one frame to another when ganged. Modular harnesses are compatible with one-circuit and two-circuit receptacle kits.

Power infeeds include bracket for mounting to the frame and can be attached to either end of the power kits.

Power infeeds can connect to power kits or branching connectors only.

Hardwire-to-modular power infeeds bring the power from the building power source to the base frame.

Hardwire-to-modular power infeed is available in 9'L. The hardwired end is connected by an electrician to a junction box wherever it is located in the building. The harness is routed to the bottom of the frame and connected to a power kit. Non-PVC is standard.

Power kits include the necessary receptacle kits, brackets, connectors and harnesses to accommodate specified frame sizes and power module quantity needs.

Power kits are single circuit only. Modular power should be ordered as components when two circuits are needed.

Power kits do not include base power in which must be specified separately.

Power kits are available with one, two, three or four power module options depending on your frame size and power need.

Vertical cable risers can be used to hide cords or power conduit coming from the floor to the frame. Vertical risers are bolted to the floor at any location under the frame. Attachment hardware is included.

Connections

Drop-in power strips are shipped with all hardware included and can be removed without tools.

Frame-mounted power strips are mounted to bracket without tool.

Receptacle kits include one power module and one bracket that is mounted to the underside of the tube-steel frame.

Hardwired base power-in must be secured to the frame with a strain-relief bracket that is included with the base power-in style number.

Wiring and Cabling

All power components are non PVC.

All electrical components are UL listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Hardwire power is also available for cities where codes require it.

Underwriters Laboratory (UL) listed. These products have been designed to meet U.S. and Canadian national electrical and energy codes and most local building codes. Local electrical codes vary. How to Calculate Power Needs

Use This to Determine How Many Power-Ins You'll Need

When planning a power network, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

If your usage is not known in advance:

The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in.

If your usage is known in advance:

Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60 amps (20 amps times 3 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.

▶ See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

The backpack storage area and overall chair width require 23³/₄" of continuous floor space when used with tables. The minimum distance between table bases is 49" to allow two chairs to be pushed under the worksurface. This does not apply to five-arm base models.

Planning with Node by Steelcase

For Classroom Environments

Pedagogy, technology and space, when carefully considered and intentionally designed, can establish new protocols for advanced learning solutions.

Planning Tips

- 1 Illustrate multiple modes for each drawing to:
 - a) ensure enough space is available for each reconfiguration
 - b) allow the user to understand what's possible
 - c) ensure that sight lines are maintained when the furniture is moved
 - d) confirm that jurisdictional codes are followed for each layout (eg: International Building Code, American Disability Act, etc.)
- 2 Give permission to act differently by including wall guard and enough space to move, supporting simultaneous multi-modal activities.
- 3 Provide both analogue and digital tools in the solution such as whiteboards, personal whiteboards, interactive whiteboards or media:scape.
- 4 Address the needs of classroom and personal storage for both students and teachers. Incorporate this information into each mode to ensure space is adequate.
- 5 Include zones for mentoring, assessment, and/or coaching for teacher-to-student and/or student-to-student interaction.
- 6 Annotate the drawings with design principles to confirm they are being addressed.

Planning with Node by Steelcase

For Healthcare Environments

Clinicians, patients, family, technology, and space should be carefully considered and intentionally designed to create impactful and meaningful healthcare experiences.

Planning Tips

- 1 Demonstrate ability for a clinician to perform three key behaviors:
 - a) input information using a mobile device.
 - b) share information with the patient and family member.
 - c) connect with patient by moving surface aside for physical exam
- 2 Encourage customers to think differently about the other objects within the exam space to encourage collaboration and mutual participation with all participants.
- 3 Provide both analogue and digital capabilities for both teaching and learning with the clinician, patient, and family member.
- 4 Optimize real estate by considering a chair-based exam for many exam room applications.

Retail Exam Space

Wellbeing Hub

Room Dimensions: 13'11" x 11'3"

Wellbeing hubs offers a blended space to perform a physical exam and consultative experience.

Room Dimensions: 9'6" x 12'

Retail exam spaces maximize real estate by accommodating the physical exam, consultative experience, and clinician work area.

▶ See *Table 1004.1.1 Maximum Floor Area Allowances per Occupant, 2009 International Building Code.*

Planning Tips, continued**Pediatric Exam Space**

Room Dimensions: 11'6" x 10'

Pediatric exam spaces are about building trust and connection by accommodating clinicians, parents, and children with a more consultative experience.

▶ See *Table 1004.1.1 Maximum Floor Area Allowances per Occupant, 2009 International Building Code.*

Move 490 Series by Steelcase

Move chairs are guest chairs that also stack. Live dynamic seat, open cantilever arm design, light weight, and strength make Move a logical choice for multipurpose areas. Move's simple design complements a broad range of work settings.

Arms are cantilevered and will easily clear the front edge of a worksurface or table. The open cantilever design of the arms allows alternative postures and sitting positions.

Steel frame is monochromatic.

Seat and back are available in plastic or with an upholstered cushion.

Plastic glides have a hard plastic insert.

Upholstered back is available on selected styles.

Casters have hard, dual wheels that roll smoothly on carpets. Soft, dual-wheel casters are available for use on hard floor or chair mats. Casters are available in black only.

Tip: Do not roll the chair across asphalt during installation as this may damage the casters.

Product Details

Chairs and stools have a leg-base and are available with glides or casters, and with or without arms.

Stackability for leg base chair models is five high on the floor. Stools do not stack.

Plastic glides with stainless steel inserts are recommended for carpeted surfaces.

Soft felt glides for use on non-carpeted surfaces are available as an option.

Transport and storage dolly is available to stack, move, and store up to 10 chairs.

Programs & Services

▶ See the *Surface Materials Reference Manual* for further detail about programs and services offered for seating.

Select Surfaces For information on products within Select Surfaces

, including accent paints, signature plastics, and fabrics from Designtex, Gabriel, Kvadrat, and Pollack, please refer to the *Surface Materials Reference Manual* or visit www.steelcase.com/selectsurfaces.

The Customer's Own Material (COM) Program

offers the opportunity for customers to select fabrics that are not offered through the standard Steelcase surface materials program for use on Steelcase products. Through the COM program, Steelcase will test your materials for application on Steelcase products. Once approved, you can place your order. Steelcase will facilitate the entire ordering process and give you a production schedule. Steelcase will order the COM fabric directly from the textile manufacturer. For up-to-date information regarding fabric test results for all COM fabrics and details regarding yardage requirements for most Seating lines, visit the COM Web site. To locate the COM Web site:

- Visit www.steelcase.com

Soil retardants are treatments that provide long-term soil and stain resistance to a fabric without affecting the shade or the integrity of the fabric. The following Steelcase Textiles are available pre-treated with soil retardant. (You do not need to select the soil-retardant option for these fabrics and incur the upcharge.)

For information on soil retardant fabrics on Select Surfaces, please refer to the *Surface Materials Reference Manual*. Soil-retardant treatment is available on all other seating fabrics at an additional upcharge per seating unit. To order this option, please select "Soil-Retardant Treatment" under "Optional Accessories."

For soil-retardant treatment on COMs, please select "Soil-Retardant Treatment" under "Optional Accessories." Minimums or additional yardage may be required. Please contact the vendor directly for specific information.

Extended lead times may be necessary for this service.

Fire Codes

▶ See *Surface Materials Reference Manual*.

Steelcase offers Fire Code Seating modification (FCS) on some seating models. The most rigorous fire codes in the nation have been developed in California, and the Steelcase FCS modification is designed to meet those codes. Fire Code Seating (FCS) indicates that a product is constructed to meet the strict fire code requirements of high public occupancy areas such as theaters, meeting rooms, and lobbies. The FCS standards will meet the State of California Bureau of Electronic and Appliance Repair, Home Furnishings, and Thermal Insulation Technical Bulletin 133 (Cal TB 133). Boston adopted the California Bureau of Electronic and Appliance Repair, Home Furnishings, and Thermal Insulation Technical Bulletin TB 133 test standard in 1992.

Local codes may have special requirements for upholstery.

Player 475 Series by Steelcase

Player chairs are guest chairs that also stack. Strength features in the back, arms, and back legs make Player a logical choice for high-traffic areas, and its simple, classic design complements a broad range of work settings.

Arms slope downward and will easily clear the front edge of a worksurface or table. Arms are available in smooth or textured finish.

Steel frame is monochromatic.

Back and seat, including outer back, are fully upholstered. High-back and thick-seat options are available.

Plastic glides with a hard plastic insert are standard.

Casters have hard, dual wheels that roll smoothly on carpets. They are 2" in diameter for increased mobility. Soft, dual-wheel casters are available for use on hard floor or chair mats. Casters available in black only. *Tip: Do not roll the chair across asphalt during installation as this may damage the casters.*

Product Details

Chair models are available with a leg-base or a sled-base. Stools are available with a leg-base. The leg base arms are available with casters. Chairs and stools are available with several features such as arms, tablet arms, high back, and thick seat.

Stackability for leg-base models is six high on the floor and eight high on the transport and storage dolly. Leg-base models with casters are not recommended to stack as damage to arms may occur. Sled-base models, stools, and chairs with tablet arms will not stack.

High-back option, available on all Player chairs and stools, adds 2½" to back height. Top edge is slightly rounded. Stackability is not affected.

Thick-seat option, available on all Player chairs and stools, increases the thickness of the seat cushion by approximately 1/2". Stackability is not affected.

Tablet arm is available right hand and left hand and is shipped knocked down (K.D.). Tablet arm tilts for easy entrance and exit from chair. Tablet arm measures 25 1/2" x 13 1/2". Tablet arm is not available to order separately for installation on existing chairs.

Plastic glides, with stainless steel inserts on leg-base Player chairs, are recommended for carpeted surfaces only.

Soft felt glides are available on Player chairs for non-carpeted surfaces.

Alignment device is available to temporarily link chairs together for evenly spaced rows. Chairs can be unlinked easily. Spacing between chairs linked with alignment device is 5 7/8".

Ganging device is available to link chairs on a more permanent basis. It attaches to the chair's side frame. Spacing between chairs linked with the ganging device is approximately 9".

Transport and storage dolly is available to stack, move, and store up to eight chairs with or without arms. Without the dolly, chairs will stack up to six high. Sled-base models, stools, and chairs with tablet arms will not stack.

Fully loaded transport dolly measures 32 3/4"D x 25 1/2"W x 55 3/4"H.

Through the COM program, Steelcase will test your materials for application on Steelcase products. Once approved, you can place your order. Steelcase will facilitate the entire ordering process and give you a production schedule. Steelcase will order the COM fabric directly from the textile manufacturer. For up-to-date information regarding fabric test results for all COM fabrics and details regarding yardage requirements for most Seating lines, visit the COM Web site. To locate the COM Web site:

- Visit www.steelcase.com

Soil retardants are treatments that provide long-term soil and stain resistance to a fabric without affecting the shade or the integrity of the fabric. The following Steelcase Textiles are available pre-treated with soil retardant. (You do not need to select the soil-retardant option for these fabrics and incur the upcharge.)

Bariatric stacking arm chair is available with a 26" seat width and with straight or wall-saver legs.

Easy access chairs have a 24" seat height and include a foot rest. They are non-stacking with straight legs and available with 18"W and 22"W seats.

Wood back is maple and is available on all chairs.

Thicker seat option, available on all Sorrel seating, increases the thickness of the seat cushion by approximately 1/2". Stackability is not affected.

Leg guards are available as an option on all chairs and coordinate with the frame finish.

Soft felt glides are available as an option for use on non-carpeted surfaces.

Different fabrics can be specified on the seat and back.

Moisture barrier is available as an option on seat only.

Two transport and storage dollies are available. The standard dolly is used to stack, move, and store up to 10 standard 18"W chairs. The bariatric dolly holds up to six bariatric chairs. Dollies do not accommodate wall-saver styles or 22"W chairs. Approximate dimensions for 10 stacked 18"W standard chairs on a dolly are 36"D X 24"W X 71"H.

Ganging brackets are available to link chairs in the field and must be specified separately.

When chairs are ganged, the spacing between the front of the arms is 1" and the spacing between the front legs is 4³/₈". The spacing between the rear legs is 5³/₄".

Product Details

Left and right for all features and options are determined when facing the front of the chair.

Two seat widths are available for all configurations—23"W and 26"W.

Empath recliners are available with fully upholstered arms.

Empath recliners are available with a rounded seat and back cushion option. Seat and back must both have rounded corner option selected or both have square corners.

Back recline mechanism operates independently from the footrest and features infinite stop positions from upright to full recline.

Footrest lever is standard on the left side facing arm. For most secure posture, open prior to reclining the back and close after returning back to the upright position.

Backrest recline paddles are integrated into the urethane arm to provide intuitive and easy use. The paddles are long, providing the right interface whether sitting upright or reclined and are on both sides. Simply squeeze one or the other or both to operate the back recline mechanism.

Backrest recline paddles are integrated into the fully upholstered arms in a bezel on the left-side facing arm. An additional right-side facing recline paddle can be added for dual recline mechanisms.

Upper arms are urethane over molded foam with aluminum die cast inserts. They feature an integrated grip and the backrest recline paddles. The gentle curve on the inside provides comfort and safety and the long, integrated grip from front to back on the outside provides support, especially when getting in or out of the chair. The arms are cushioned yet supportive, resilient, and easy to clean.

Upper arms can also be specified as fully upholstered through a separate style number. These arms are available as fixed, right side facing flip-down, left side facing flip-down, or dual flip-down arms.

Fully upholstered arms can be ordered with or without plastic arm caps that will lay on top of the upholstered section.

Central lock system features easy activation pedals at the front of the chair and on both sides. Use from either side by pushing down to lock and pushing down slightly again to unlock. Easily identify if the chair is secure simply by looking at the pedal and hearing an audible click. When activated, the system locks both the wheel rotation and swivel on three of the four casters to ensure the chair will not inadvertently move.

Central lock system comes standard with urethane arm recliners and as an option on fully upholstered arm recliners.

Individually locking casters come standard on Empath with fully upholstered arms. Individually locking casters are plastic and available on all chairs with fully upholstered arms. Individually locking casters are not available on Empath with molded urethane upper arms.

Metal legs are an available option and are powder coated aluminum. Metal legs are 4" tall and are adjustable up to 3/4".

Footrest features a plastic scallop on 23" wide versions and upholstered scallop on 26" wide versions providing comfort where feet and shoes touch most. Scallop also helps facilitate safer exiting of the chair when footrest is closed by allowing heels to go farther underneath.

Bumper along the bottom of the arm panels acts to protect the chair and provides an ending point to bottom of the chair.

Flip-down arm assists with patient transfer into or out of the chair and is available on the left, right, or both sides. Arms self-lock when lifted back to the upright position.

Tip: IV pole, IV pole holder, and drainage bag is not available on folding Empath fully upholstered arms.

Flip-down arm release strap is located on the back of the arm for caregiver operation. Simply pull strap and fold arm down.

Tip: For urethane arm only.

For fully upholstered arms, the flip-down arm release is located on the back of the arm for caregiver operation. Press down on release lever and fold arm down.

When fully upholstered arms are folded over for patient transport, the transfer surface is molded plastic and fabric to create a snug fit to reduce gapping.

Urethane Empath arms and fully upholstered Empath arms use two different tablet arms which are not interchangeable. Tablet arm on urethane Empath arm swivels 270° when up and folds down to the side of the chair when not needed.

Simply rotate up to lock into up position. To lower, press release button on tablet arm and rotate down. Tablet surface is 9³/₄" x 19³/₄" and can be specified on units with at least one fixed arm. Tablet arm location, left or right side (shown), drives the footrest lever placement—footrest lever will be on the arm panel opposite the tablet. Tablet arm adds approximately 2" to the width and 3¹/₂" to the depth of the recliner when up and in front position and 4" to both the width and depth when in the down position.

Tablet arm on fully upholstered Empath arms swivels 270°. The tablet surface is 9³/₄" x 19³/₄" and is thermo-form. The tablet arm can be applied to the right-side facing arm or the left-side facing arm. Footrest lever will be on the left-side facing arm panel. Tablet arm adds approximately 2³/₅" to the width of the recliner. Tablets on fully upholstered Empath arms do not fold down to the side of recline. Tablet arm always remains in upward position.

Tablets can only be specified on fixed arms and cannot be specified on fold-down arms.

Tip: IV pole, IV pole holder, and drainage bag is not available on folding Empath fully upholstered arms.

Directional steering system helps the chair track straight while in motion, improving control in hallways and around corners. System allows caregivers to turn steering on or off and is independent of central lock. Activation pedal is conveniently located on the back of the recliner. Press down to engage two directional casters. Press down slightly again to disengage, allowing chair to move directly sideways or any other direction required within tight spaces. Directional steering is not available for chairs with metal legs.

Push bar is conveniently located and ergonomically shaped to enhance caregiver grip and maneuverability.

Pull out footrest easily slides out from underneath the chair to support a patient's feet while seated.

IV pole fits into the IV pole holder and is ordered separately. It is 3/4" diameter and height adjustable. The pole features a two loop hanger at the top.

IV pole holder is positioned on the back of the arm panel and accommodates 1/2" to 3/4" IV poles. It can be mounted on the left- or right-side facing. IV pole holder option does not include IV pole; it can be ordered separately.

IV pole holder is not available on a fully upholstered Empath flip-down arm.

Trendelenburg foot is foot activated from either side and allows the caregiver to recline the chair so a patient's feet are above the head.

Drainage bag hanger accommodates various drainage bags and lays flat when not in use. It is available on all models and can be configured as left facing, right facing, or on both sides of the arm.

Tip: Possible interference exists when a drainage bag hanger is specified on the same side as a flip-down arm or the footrest lever and a drainage bag is attached. Care should be exercised in these configurations to help avoid inadvertent damage to the bag. There is no interference between the flip-down arm or footrest lever and drainage bag hanger itself (without a bag attached).

Drainage bag holder is not available on a fully upholstered Empath with flip-down arm.

Square headrest

Round headrest

An optional headrest is available on Empath recliners. The headrest is square or round and can be removed by zipper.

Both headrest shapes are available on both square and rounded seat and back cushion styles.

Heat and massage option is UL approved. Both functions feature three settings allowing the user to adjust for personal preference. User hand held control pendant has a flexible cord and stores on the side of the back when not in use.

Seat cushion is available in standard and soft options. When softer seat is selected, seat foam is approximately 15% softer.

Frame and inner structure, including the arm panels, seat pan, back frame, mechanism, and chassis are completely constructed of welded steel for long term durability.

Up to four different fabrics can be specified: back (A), seat (B), sides (C), and front (D). The headrest (E) is a separate specifiable option.

Moisture barrier is available as an option on the seat only.

Empath Recliners

Tip: Left and right for flip-down arms, tablet, drainage bag hanger, and IV pole holder are determined when facing the front of the chair.

Tip: Different fabrics for the seat, back, sides, and front can be specified. If the fabrics are in different price groups, calculate list price by adding the price groups for each surface together and dividing by four. For example, if specifying seat and front fabric both in group 2, sides in group 4, and back in group 6, add the list price in price group 2 twice (seat + front), price group 4 once (sides), and price group 6 (back) once then divide by four.

Tip: Tablet can be located on a fixed arm only. It is not available on dual flip-down arm models. If specified on right flip-down arm models or on the left side facing arm of fixed arm models, the footrest lever will be placed on the right side facing arm panel, opposite the tablet.

Tip: Directional steering, push bar, and pull out footrest are ordered as options.

Tip: IV pole option does not include pole holder (and vice versa). Must order each option separately.

Tip: Possible interference exists when a drainage bag hanger is specified on the same side as a flip-down arm or the footrest lever and a drainage bag is attached. Care should be exercised in these configurations to help avoid inadvertent damage to the bag. There is no interference between the flip-down arm or footrest lever and drainage bag hanger itself (without a bag attached).

Mineral Recliners

Mineral recliner seating is designed to provide big chair comfort in a compact size.

Headrest provides continuous support in the seated position and various reclined postures.

Seat cushion and back are upholstered. Elastic web straps, which are connected to the steel frame, provide additional seat and back support.

Arms panels are enclosed and upholstered. Arm caps have a beveled front grip to help ease of entry and exit from the chair.

Backrest recline actuator controls the reclining function of the chair.

Footrest control lever opens and closes the footrest and operates independently from the backrest recline actuator to provide maximum control and comfort.

Frame is constructed of welded steel for long-term durability.

Optional wood legs are also available.

Fold-down arm assists with patient transfer to or from another surface.

Footrest is scalloped to help prevent feet from slipping off the ends in the raised position and help facilitate exiting the chair in the closed position.

Casters are standard and each feature a total lock system to lock both wheel and swivel with easy action.

Actual Dimensions

Features	Overall			Seat			Arm Height	Fully Reclined Depth
	Depth	Width	Height	Depth	Width	Height		
Reclining chair	30"	29½" and 32½"	46"	18½"	23" and 26"	20½"	26"	69"

Product Details

Left and right for all features and options are determined when facing the front of the chair.

Two seat widths are available for all configurations, 23"W and 26"W.

Back recline mechanism facilitates a near full flat recline. Pull and hold actuator to recline back and return to upright. Release actuator to keep back at desired position.

Footrest lever is standard on the left side facing arm. For most secure posture, open prior to reclining the back and close after returning the back to the upright position.

Tablet arm is 11" x 20" and swivels 270°. It can be mounted on the left or right side (shown) of fixed arm models. If left mount is specified, the recline levers will be positioned on the right side of the unit when facing the front of the chair.

Heat and massage option is UL approved. Both functions feature three settings allowing the user to adjust for personal preference. User hand held control pendant has a flexible cord and stores on the side of the back when not in use.

Fold-down arm assists with patient transfer to or from another surface. The arm self-locks when lifted into the upright position.

Flip-down release tab is located at the back of the arm for easy access and operation.

Push bar attaches to the back to assist in maneuverability.

Pull out foot rest easily slides out to support a patient's feet while seated.

IV pole holder is positioned on the back of the arm panel and accommodates 1/2" to 3/4" diameter stainless steel IV poles. It can be mounted on the left or right side.

Tip: Height adjustable, 3/4" diameter stainless steel IV pole is available through customer service (part 22158701SR).

Arm caps are available in solid wood or plastisol.

Drainage bag hanger accommodates foley bags and other drainage bags and closes flat when not in use. It is best specified on the arm opposite the recline levers but can be mounted on the left or right side. On flip-down arm models, it will be positioned on the opposite arm of the flip-down (controls side).

Wood legs are available as an option and include non-adjustable plastic glides.

Up to four different fabrics can be specified: back (A), seat (B), sides (C), and front (D).

Moisture barrier is available as an option on the seat only.

Tip: Left and right for flip-down arms, tablet arm, IV pole holder, and drainage bag hanger are determined when facing the front of the chair.

Tip: Different fabrics for the seat, back, sides, and front can be specified. If the fabrics are in different price groups, calculate list price by adding the price groups for each surface together and dividing by four. For example, if specifying seat and front fabric both in group 2, sides in group 4, and back in group 6, add the list price in price group 2 twice (seat + front), price group 4 once (sides), and price group 6 (back) once then divide by four.

Tip: Tablet can only be specified on fixed arm model. If mounted on the left, recline levers will be placed on the right arm panel when facing the front of the chair.

Tip: Tablet arm option can be specified in conjunction with the IV pole holder and/or drainage bag hanger.

Tip: On flip-down arm models, the IV pole holder and/or drainage bag hanger will be positioned on the arm opposite of the flip-down arm.

Surround Configuration Charts

Surround is a frame-based modular collection of components designed to maximize the user experience. Each Surround frame can support various combinations of components to accommodate patient room and other various architecture. Product configuration is determined during specification.

Tip: Understand the dimensions of the architectural space to determine the frame.

Tip: Unit weights include one-tier storage where applicable.

Tip: Specify the maximum frame dimension to maximize experience and options.

Tip: All components must fit within the frame dimension (seat, back, arms, and storage).

Tip: Left and right is determined when facing the unit.

Tip: Understand the dimensions of the architectural space to accommodate components that may extend outside frame dimensions.

Tip: Seat and back must be the same width.

Tip: Low arm and high-recline arm are available in left- or right-facing positions.

Tip: High-recline arm placed on end of unit extends 3¾" from the frame at the outermost point.

Tip: Storage end table can be specified in one- or two-tier option.

Tip: Storage end table mounts only to the right or left side of the frame unit.

Tip: Two-tier storage requires the specification of an adjacent arm on frame.

Tip: Storage cannot be specified adjacent to other storage.

Tip: Storage width must match storage size specified on frame.

Tip: Power, two front glides and two directional back wheel casters, and mobile tablet can be specified on all units.

Tip: Unit weights are approximations and may vary between units.

Application Topics

The dimension of the architectural space accommodates components that may extend outside frame dimensions.

All components must fit within the frame dimension (seat, back, outer back, arms, and storage).

Seat cushion width specification determines back cushion and structural outer back widths.

When only one arm is specified, the opposite sides of back, outer back, and seat will be upholstered in their respective upholstery.

If a sleep surface is required, specify 60 1/2"W, 66"W, 71 1/2"W, or 77"W seat.

Sleep surface is standard with integrated instructions for use.

Sleep surface extends 2" past the seat.

Mobile tablet can easily be positioned to not interfere with sleep surface during deployment.

Adding two-tier storage requires the specification of an adjacent arm.

Low arm specified adjacent to storage allows for easier access than high-recline arm.

Power location and power type in the arm must be specified.

High-recline arm placed on end of unit extends 3 3/4" from the frame at the outermost point.

High-recline arm is recommended to be specified to allow reclining posture to face wall containing media, such as a monitor or television.

► See page 559 for *Fabric Application Direction Guidelines* to ensure fabric is specified in the correct direction.

For a comprehensive list of patterns and price grades in Steelcase Health offering, visit steelcasehealth.com/resources/grade-in.

What is the issue?

Some textiles are simple and look the same regardless of how you apply them to a product. Other fabrics are patterned, textured, or have luster that will have a distinctly different appearance applied in a different direction on a chair. Because of these differences, and the fact that there are limits to how some fabrics can be applied to Steelcase Health products, it is important to understand fabric application direction when ordering a product to avoid being disappointed.

Talking about direction

Fabrics come on rolls. The long yarns that run down the length of the roll are called the “warp” yarns. These yarns are used to define the direction you are viewing the fabric as it is applied to a chair. Fabric directionality is determined by how the fabric comes off the roll.

It is NOT determined by the way the pattern looks on the product. For example, the image below shows the fabric applied warped horizontal although the stripes appear vertical.

Terminology

Steelcase uses the terms warped horizontal and warped vertical. There are other terms within the industry that are used that have the same meaning:

- Warped horizontal is also referred to as: railroaded or across roll
- Warped vertical is also referred to as: woven way, down roll, or top out

Why is it important?

Dealers must specify fabric application direction when ordering COMs and Steelcase Health Select Surfaces fabrics. We require the dealer to specify the direction because we do not know which way customers want to see a pattern on the furniture. Therefore, it is critical to know how the pattern is run on the roll to ensure that Steelcase Health builds and ships each order to the customer's expectation each and every time.

How do I know which way the fabric comes off the roll?

Most textile companies will swatch their fabrics in a warp vertical (woven way, down roll) direction. Some exceptions might be made to address patterns especially with stripes. Typically, when a fabric is swatched in a warp horizontal (railroad or across roll) direction, the direction is noted on the swatch card or fabric sample. If in doubt of a fabric direction, we encourage you to contact the textile vendor for clarification.

Vinyl

Vinyl generally only passes on Steelcase Health product in a horizontal or across roll direction. This is due to physical properties of the material. If a vinyl is applied in the opposite direction, too much stretch in the material can compromise the overall aesthetics of the final upholstery. If a patterned vinyl is being specified and the vinyl must be run in a vertical direction, pre-approval must be arranged through Steelcase Health. Steelcase Health will consider the request and a decision will be made based on the specific vinyl and product combination. Contact Steelcase Health's Customer Care line.

Required Action Steps before Specifying

1. Verify by using Steelcase's COM website that the fabric is approved on the product.
2. Verify the direction that the fabric can be applied. Occasionally a fabric is only approved in one direction.
3. Confirm with the customer how they want the fabric to look on the furniture.
4. Confirm using the swatch card or vendor's website the direction the sample is shown.
5. Now you're ready to place the order.
