Availability

Electronic price list updated with release 202.A (U.S.) dated June 16, 2025.

This specification guide reflects PL202 pricing. All contract list prices will be PL202 plus 4.72% added to the list prices shown (round to two decimal places).

All specifications subject to change without notice. Reference the electronic catalog/Hedberg for current pricing.

Transitional products in this specification guide are **maintained for existing customers only** and are likely to be phased out over time. These products are indicated with a . Products that are scheduled to be culled are indicated with an , followed by the last order entry date.

Surface Materials

The surface materials team has announced the launch of the Finish Library, found at www.steelcase.com/finishlibrary/.

For NASPO ValuePoint Contract Pricing

Calculate in the following order to avoid rounding errors:

- Multiply the base price and each option by the 4.72% factor.
- Round each to the nearest penny (round to two decimal places).
- Add base and options for total list price.

Ten Tips: How to Get the Most Out of This Book

Tip 1

Watch the tabs on the right-hand edges of the pages. They'll always indicate which chapter you are in.

Tip 2

Use the Statement of Line pages for an overview of the available components, their sizes, and page references for additional information. Each *Understanding* chapter includes a statement of line after the table of contents.

Tip 3

Find cross references by looking for page numbers flagged with an arrow.

Tip 4

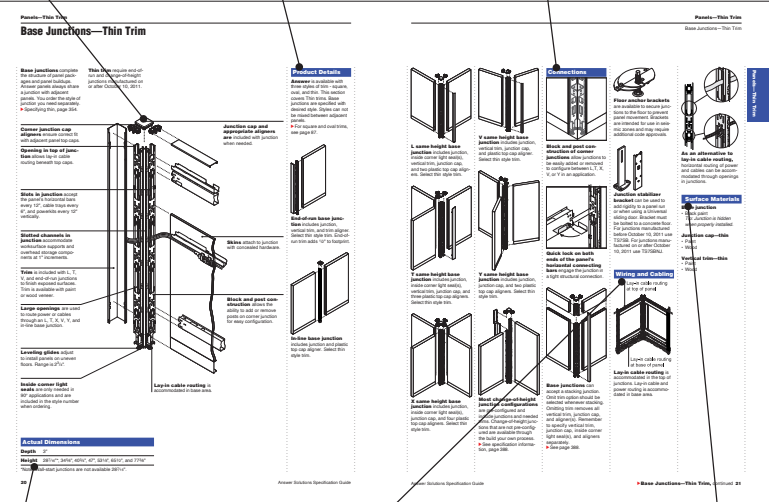

Study the product detail pages in the *Understanding* section to learn everything an expert knows about specific products. Each product detail page in this section contains the following features, where applicable:

- Product Drawing
- Actual Dimensions
- Product Details
- Connections
- Wiring and Cabling
- Surface Materials
- Application Topics

Product Drawing shows you what the product looks like and points out important features.

Product Details gives specific information on the product and how it is used.

Connections describes how the product is assembled or how it attaches to another product.

Actual Dimensions table lists the dimensions of the product.

Wiring and Cabling details the power and cable-management and cable routing capabilities of the product.

Surface Materials lists what material is used for each part of the product.

Other Specification Guides

Steelcase offers a comprehensive portfolio of furniture and solutions. For the full offering of products, refer to the individual product specification guides. These can be accessed at the www.steelcase.com web site or at village.steelcase.com

Computer Tools

Electronic Catalog

Accurate sales quotations and purchase orders for Steelcase products are created with specification software that uses Steelcase Electronic Catalog data. Use the data to specify and price style numbers and options for every Steelcase product. The data is updated bimonthly by Steelcase and provided to software programs including: the Hedberg Business System, SmartTools—Steelcase's design and specification software (for more information on SmartTools, please email SmartTools@steelcase.com), the ProjectMatrix Project Symbols libraries, as well as 20-20 CAP Studio.

Furniture Symbol Graphic Data

Steelcase creates 2D and 3D furniture symbols (with attributes) for planning and initially specifying Steelcase products. This data is incorporated into several add-on software packages that work in either a Microstation or an AutoCAD drafting environment.

Digital Publications

You can access these digital publications at www.steelcase.com or village.steelcase.com.

Air³

Air³ is a modular freestanding meeting room. Its internationally patented opening roof system features an advanced fire safety system developed specifically for sprinklered office environments.

► Specifying, pages 54–60

Louvred roof controlled by motion sensor as well as user control buttons.

Air circulation fan.

Exterior and interior side panels are upholstered acoustic panels.

Front and back panel glass are tempered glass.

Service hoop control panel side includes touch button controls for lighting, air circulation, and roof.

Service hoop power side includes three NEMA 5-15 3-prong power outlets and two data connection cutouts.

Sliding glass door can be fitted to open right to left, or left to right, at time of installation.

Service hoop horizontal bar includes three LED lights, two heat detectors, monitor sensor, and fan.

Pod Dimensions

OB1AIR29	14' 4"	13' 4"	8' 4"	14' 1"	13'	7'	2085 lb

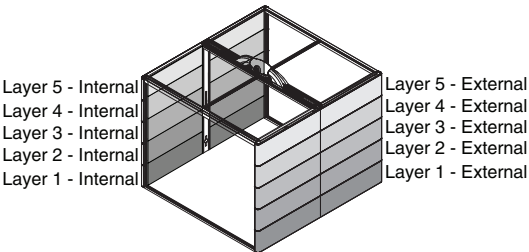

Tip: Minimum height recommended for a sprinkler covered space is 9'3" to allow for 18" clearance between the top of the open roof blade and a sprinkler head above it. These are recommendations as it is still up to the local authority having jurisdiction to identify their building requirements.

**Internal height when roof blades open is 6'9".*

Air25 configuration

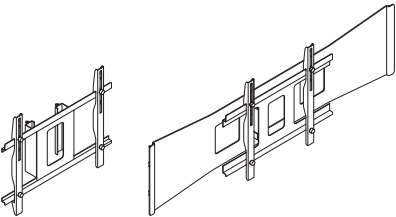

Air27 configuration

Air29 configuration

Panel positions account for both glass and fabric panels and are determined when standing outside of the pod with a right to left opening door.

Optional whiteboards can be installed in place of internal fabric panels on layers 3 and 4. Dimensions are 50³/₄" x 34³/₄".

Monitor brackets are available in two different styles and both support a monitor up to a maximum weight of 55 pounds:

- Over upholstery monitor brackets—mounted directly to the fabric panels on layers 3 and 4.
- Hoop mounted monitor brackets—attached to the power side of the service hoop.

Space Layout Constraints

Do not obstruct exit corridor. Ensure visibility to on site alarm strobes is not blocked. If sprinklers are not required interior to the unit, be advised that local codes typically prohibit obstructions within 18" (457.2 mm) of the existing building sprinklers. Ensure final placement of the unit does not block airflow inlets or outlets of the building or unit ventilation systems.

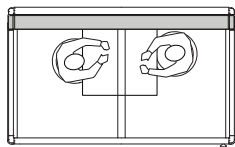

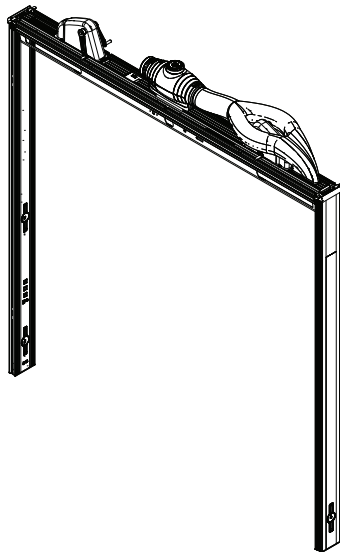

Electrical Connections

All Air³ units come standard with a 3-prong, 9' electrical cord. However, the units can be hardwired at installation. If hardwired, the hardwired connection must be routed to a junction box in the floor, wall, or ceiling via a conduit whip. Orangebox does not provide the conduit whip to make the power connection to the building. It is the responsibility of the qualified site electrician to supply and install a suitable power connection to the building in accordance with local codes.

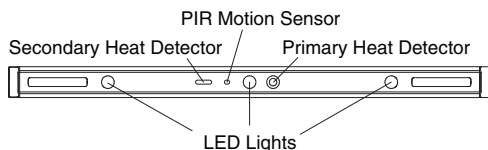

The assembly directions and user guide describe the enclosures which contain the electrical services such as power, lighting, and airflow. Lighting, fan, outlets, and sensors share one circuit within the unit. The enclosure may accommodate a single 15 Amp connection. The maximum loading of the components within the enclosure is 1.8 Kilowatts at 120 VAC.

Power usage when occupied is 100W (not including any plugged-in external equipment) per hoop.

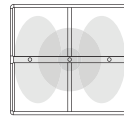

Electrical Components

The service hoop contains all the electrical services, including power, lighting, and airflow.

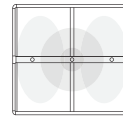

Service hoop horizontal bar includes three LED lights, two heat detectors, motion sensor, and fan.

Three LED lights are used for illumination. The lights are 4000K with a max brightness of 1300 lumens.

Passive inferred (PIR) motion sensor turns on the power to the pod when activated. Power is shut off within the pod after five minutes of inactivity.

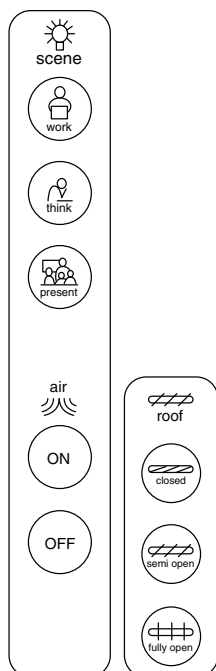

Primary heat detector will cut all power in the pod and open the roof fully if heat at 135°F (57°C) is detected.

Secondary heat detector acts as a failsafe fusible link and will cut all power in the pod and open the roof fully if heat at 150.8°F (66°C) is detected.

Service hoop power side comes standard with three NEMA 5-15 3-prong power outlets, two data connection cutouts, and two cable ports with removable center grommet for cable management.

Service hoop control panel side includes touch button controls for lighting, air circulation, and roof.

The patented louvred roof has three settings: fully open, semi open, and closed. When the pod is unoccupied, the roof is always open. When entering the pod, the passive inferred sensor (PIR) senses movement and closes the roof to create acoustic privacy. When the pod is occupied, it is possible to select either 10° (semi) or 90° (fully) open position manually for enhanced airflow. The PIR turns the power off after five minutes and the roof automatically opens.

Occupancy sensor activates the lights and fan. The sensor operates at low voltage and utilizes both ultrasonic and infrared sensing to avoid false triggering.

Airflow and Handling

Ventilation fans are rated at 330 cubic feet of air per minute (CFM) and 23 dBA.

Tip: Fan CFM ratings alone cannot be used to determine the actual system ventilation rate.

Building and Fire Code Compliance

Seismic considerations: For seismic considerations, the building's Structural Engineer of Record (SEOR) must be consulted. Seismic structural analysis report prepared by a licensed professional engineer may be required for specific locations.

Fire suppression: Sprinkler requirements are an important consideration for product assembly. Local codes may impact the number and location of mandated sprinklers. It is important to check with the local authorities to ensure product installation meets local requirements. If required, sprinkler location options within the unit are identified in product-specific assembly directions.

Fire alarms: National Fire Protection Agency (NFPA) 72 requires a fire alarm to be at least 15 dB above ambient to ensure occupants can hear the alarm. This is an on-site requirement. This may require a visible and/or audible notifier within the unit. If the unit is equipped with a fire detection system, some jurisdictions may require it be connected to the building's fire detection system.

Energy efficiency: ASHRAE 90.1 and California Energy Commission (CEC) Title 24 identify lighting controls and power density requirements. This is an on-site requirement. Ensure this unit in its final environment adheres to these standards by confirming with local authorities.

Camper

Louvered roof is controlled by a motion sensor as well as user buttons.

Service hoop control panel side includes touch button controls for lighting, air circulation, and roof. Control panel side of the hoop is on the door side.

Service hoop power side includes 3 NEMA power outlets as standard. USB A & C and Data and HDMI can be selected as an option. Power side of the hoop is opposite of the door.

Service hoop horizontal bar includes LED lights, smoke detector, motion sensor, and fan.

Frame comes standard in 7207 Black paint.

Exterior side panels come with fabric, laminate, or plywood.

Fascia is available in paint or fabric.

Exterior contrasting panels can be selected where one panel per wall can be a contrasting fabric, laminate, or plywood.

Door handle is available in natural oak or black oak.

Power access is through floor or ceiling.

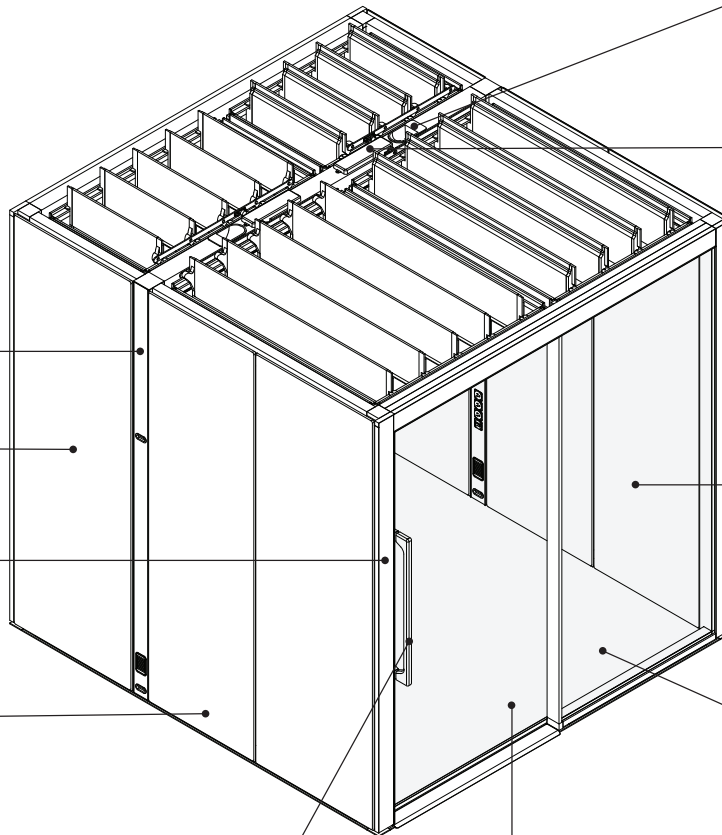

Air circulation fan comes standard.

Interior wall panels default to fabric. One panel per wall can be a contrasting fabric or laminate. Interior panels cannot have two hard surfaces meet at corners.

Panel glass has three different glass configurations available. Glass is 8 mm tempered glass.

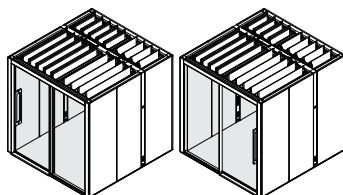

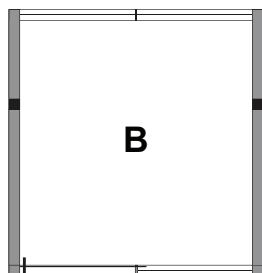

Tip: Styles ending with an NB will have a glass infill on the front of the unit to offset the door from the side wall by 12".

Sliding glass doors, right- or left-handed style numbers available. Handedness is indicated by door position when facing unit.

For **CD05CLS**, the glass will replace interior wall 3, panel D and exterior wall 3, panel A.

For **CD05CRS**, the glass will replace interior wall 3, panel A and exterior wall 3, panel D.

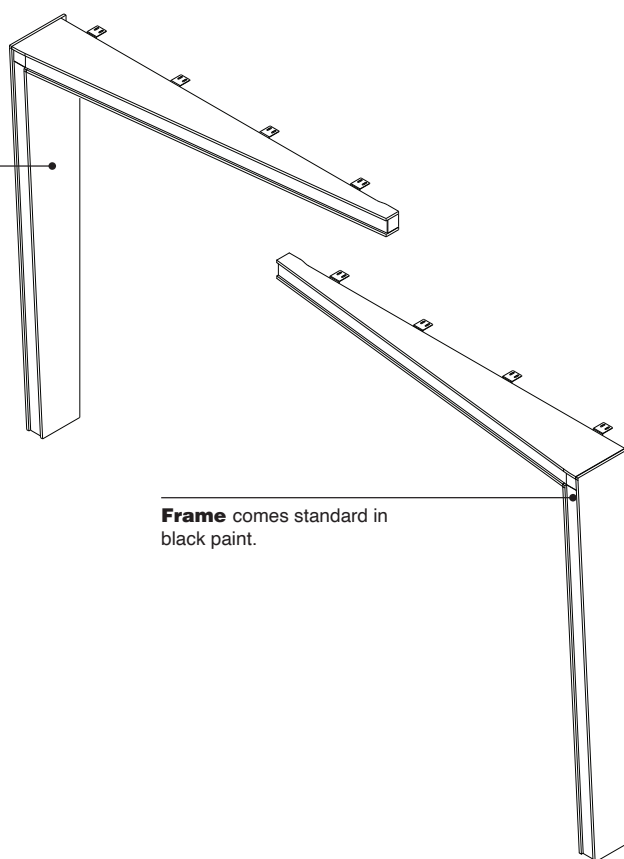

CD05 style with an NB suffix have a glass infill on the front of the camper that offsets the door by 12". This infill allows for the unit to be AODA compliant in Ontario, Canada.

Campers & Dens

Kink

Interior and exterior are available in laminate, fabric, or plywood.
Tip: Kinks can only be applied to the front door wall. Handedness matches the door opening direction.

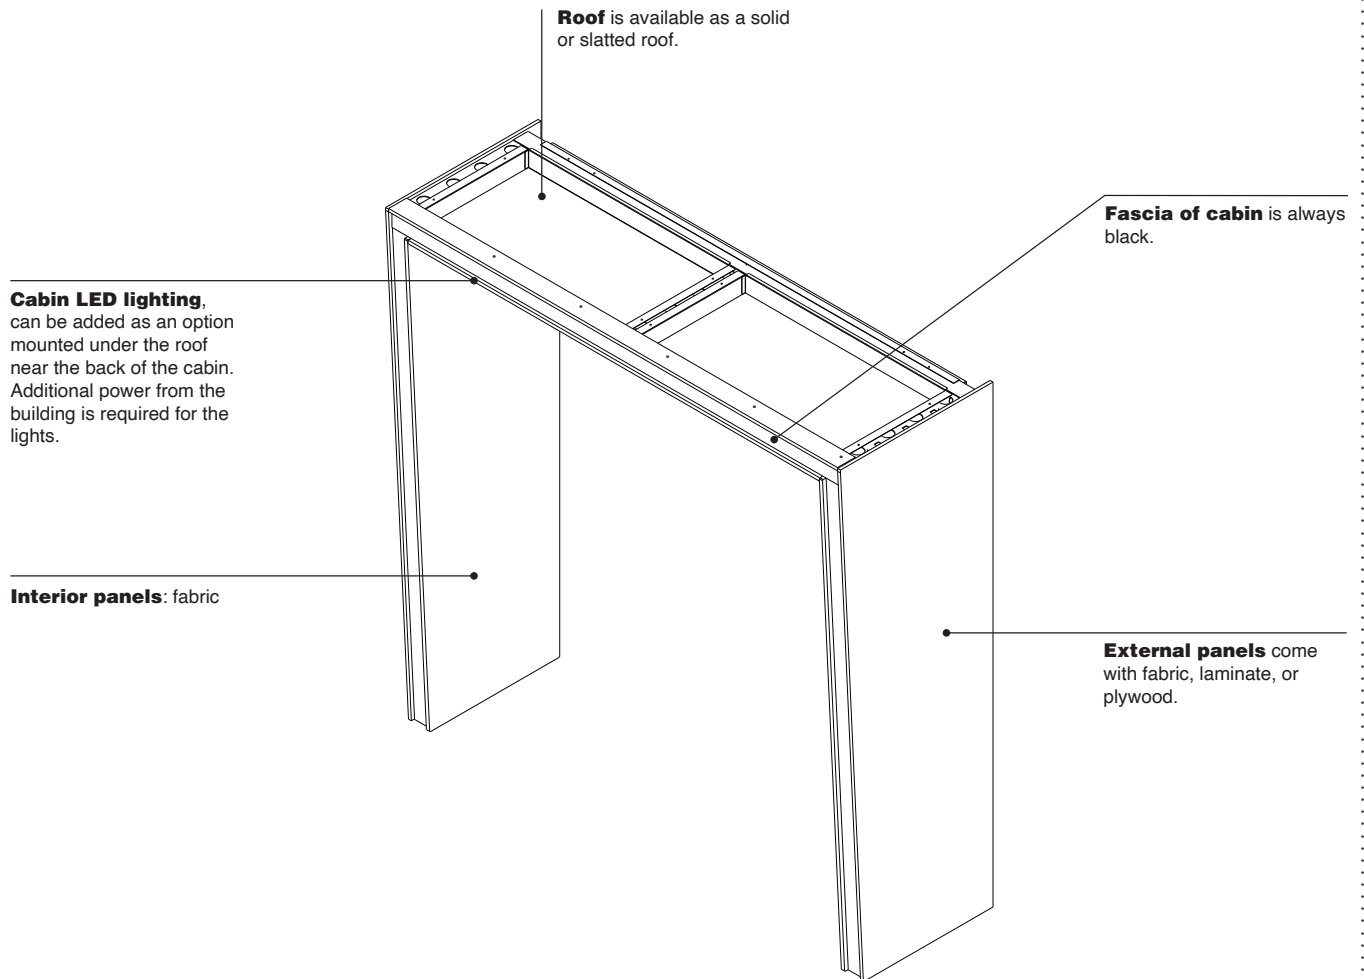

Frame comes standard in black paint.

Contrasting fabric is available between the seat, the inner back, and the outer back.

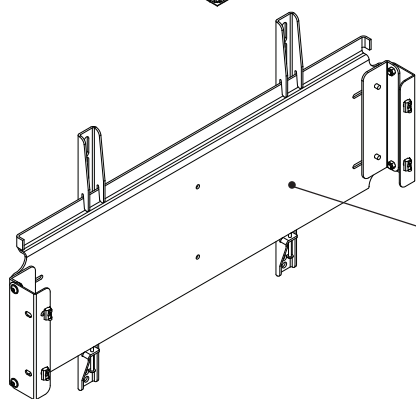

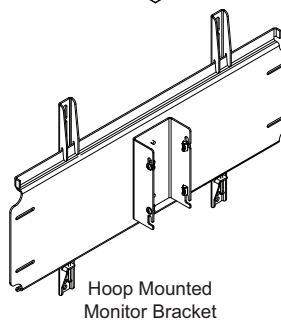

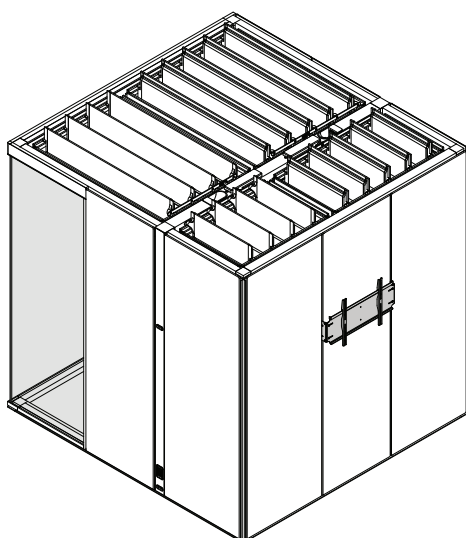

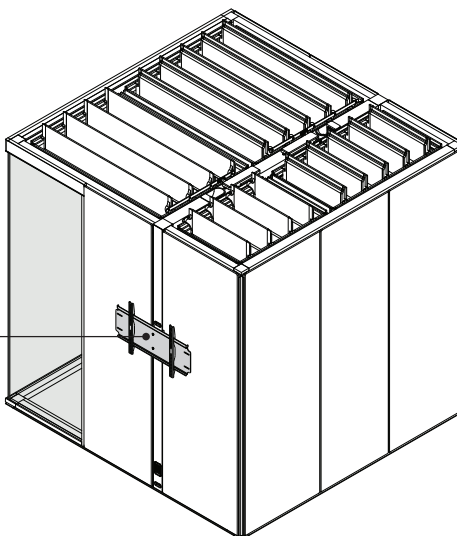

Double

Campers & Dens

Monitor Brackets

Mount height is flexible and can be determined during the installation.

Monitor brackets mount to hoop on the interior or exterior of the camper.

Off Hoop (Panel) Mounted Monitor Bracket

Off hoop (panel) mounts are centered on a panel.

Space Layout Constraints

Do not obstruct exit corridor. Ensure visibility to on site alarm strobes is not blocked. If sprinklers are not required interior to the unit, be advised that local codes typically prohibit obstructions within 18" (457.2 mm) of the existing building sprinklers. Ensure final placement of the unit does not block airflow inlets or outlets of the building or unit ventilation systems.

The product contains a magnet in the door-post assembly.

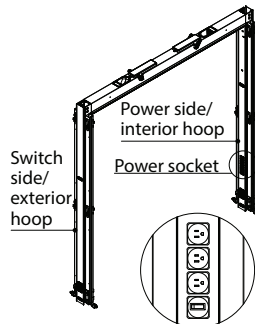

Electrical Connections

The camper includes a 9-foot cord attached to the power side of the hoop on the outside of the pod powering the pod and one set of outlets on the interior power side of the camper. Power cords can accommodate either floor or ceiling sources. All power cords can be rerouted to the inside of the pod for floor power located inside the pod.

The power placement in the floor should be located on the exterior of the camper on the power side of the hoop. The power cord can be re-routed to the inside of the camper, if required, at installation. Additional floor power is required for accessories in awning and cabin.

The assembly directions and user guide describe the enclosures which contain the electrical services such as power, lighting, and airflow. Lighting, fan, outlets, and sensors share one circuit within the unit. The enclosure may accommodate a single 15 Amp connection. The maximum loading of the components within the enclosure is 1.8 Kilowatts at 120 VAC. Power usage when occupied is 100W (not including any plugged-in external equipment) per hoop.

Electrical Components

The service hoop contains all the electrical services including power, lighting, and airflow.

Power Options

Power is located on the power-side of the interior of the service hoop. This is the side that is opposite of the camper door.

Tip: The hoop can be reversed at installation so that the power is located on the same side as the door.

The standard includes three power outlets. The power is located beneath the worksurface. USB A+C can be added as an option in place of one of the power outlets.

	Standard	Optional
Power Outlet		
Isolator Switch		

HDMI, data ports, and cables can be added as an option. If selected, these ports are located on the service hoop at the worksurface height.

Building and Fire Code Compliance

Seismic considerations: For seismic considerations, the building's Structural Engineer of Record (SEOR) must be consulted. Seismic structural analysis report prepared by a licensed professional engineer may be required for specific locations. Seismic bracket kit is available with style number **OB1CDSBK**.

Fire suppression: Sprinkler requirements are an important consideration for product assembly. Local codes may impact the number and location of mandated sprinklers. It is important to check with the local authorities to ensure product installation meets local requirements. If required, sprinkler location options within the unit are identified in product-specific assembly directions.

Fire alarms: National Fire Protection Agency (NFPA) 72 requires a fire alarm to be at least 15 dB above ambient to ensure occupants can hear the alarm. This is an on site requirement. This may require a visible and/or audible notifier within the unit. If the unit is equipped with a fire detection system, some jurisdictions may require it be connected to the building's fire detection system.

Energy efficiency: ASHRAE 90.1 and California Energy Commission (CEC) Title 24 identify lighting controls and power density requirements. This is an on-site requirement. Ensure this unit in its final environment adheres to these standards by confirming with local authorities.

On the QT

On the QT phone booths were designed to provide compact enclosed space in open plan workspaces to allow work to be carried out more effectively with reduced distractions.

► Specifying, pages 142–150

Frame constructed of aluminum.

Cover caps frame the glass door and glass wall. Available in a range of paint finishes.

Front and back panel glass are clear laminated glass.

Occupancy light illuminates red when booth is in use.

Fan built discretely into the roof panel.

Interior cladding is polyester felt.

Lighting positioned near the front of the booth for optimal work lighting.

Front and rear cladding is laminate as standard, with option of fabric, painted steel, plywood, or whiteboard.

Threshold height is 5" min to 7" max.

Seat designed with ergonomic focus to promote comfortable longer term use.

Tablet included as standard.

Angled seat face creates a comfortable pivot space to enter the booth and sit.

Product Details

Left hand (LH) and right hand (RH) are determined by the location of the door hinge when entering the booth.

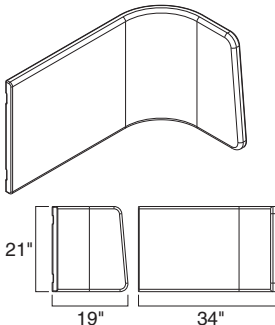

Front and rear are determined based on the user seated position. "Front" will indicate the wall the user faces, while "rear" will indicate the wall behind the user.

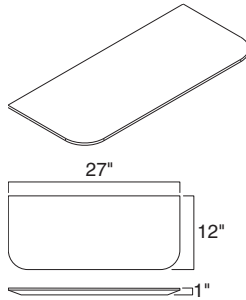

Baffles can be optioned to add an additional layer of visual and acoustic privacy. These fully upholstered baffles are available as a privacy screen or lean pad.

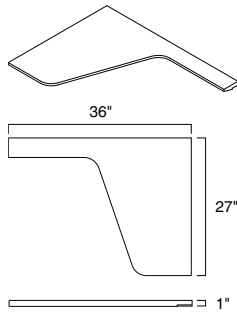

Privacy screens install to the front of the phone booth and sit above worksurface height.

Lean pads install to the rear of the phone booth and sit at shoulder/head height.

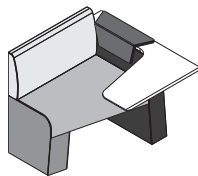

Shelf can be specified in both the short and tall phone booths. When specified, the shelf height is 28³/₄" in the short booth and 41³/₄" in the tall booth.
Tip: Shelf should not be optioned if an On the QT furniture unit (OB1QTF01 or OB1QTF02) is specified.

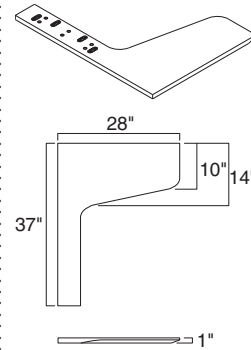

L-shelf can be specified in the tall phone booths only. When specified, the shelf height is 41³/₄".

All worksurfaces come standard in High-Pressure Laminate.

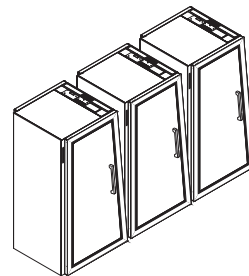

Contrasting upholstery option available on lounge furniture units with four specifiable upholstery surfaces.

Each furniture unit comes standard with an integrated worksurface in laminate.

Occupancy light is available as an option. When the phone booth is in use, the occupancy light will illuminate red. When not specified, illumination will not occur.

Do not obstruct exit corridor. Ensure visibility to on site alarm strobes is not blocked. If sprinklers are not required interior to the unit, be advised that local codes typically prohibit obstructions within 18" of the existing building sprinklers. Ensure final placement of the unit does not block airflow inlets or outlets of the building or unit ventilation systems.

Electrical Connections

Hardwired units: Electric power is delivered through a hardwired connection which must be routed to a junction box in the floor, wall, or ceiling via a conduit whip. Orangebox does not provide the conduit whip to make the power connection to the building. It is the responsibility of the qualified site electrician to supply and install a suitable power connection to the building in accordance with local codes.

The assembly directions and user guide describe the enclosures which contain the electrical services such as power, lighting, and airflow. Lighting, fan, outlets, and sensors share one circuit within the unit. The enclosure may accommodate a single 15 Amp connection. The maximum loading of the components within the enclosure is 1.8 Kilowatts at 120 VAC.

Cord and plug units: The unit is provided with a flexible power cord which is to be plugged directly into a building's hardwired electrical receptacle. A minimum spacing of 4" between the receptacle and the assembled unit is needed to protect the plug from damage.

Total cord length is 12' from the point of connection at the power distribution unit (PDU). Exposed length will be dependent on exit location.

Short phone booth:

- 116" when exiting from front
- 77" when exiting from rear

Tall phone booth:

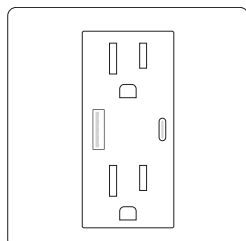

- 103" when exiting from the front
- 64" when exiting from the rear

Power usage: when occupied is 30W (not including any plugged-in external equipment).

Electrical Components

Occupancy sensor activates the lights and fan. The sensor operates at low voltage and utilizes both ultrasonic and infrared sensing to avoid false triggering. Three minutes after the booth is vacated, all features will power down.

One LED light panel is used for illumination. The light is 3000K and 450 lux at worksurface height.

When selected, unit includes two power outlets, one USB A, and one USB C port. Each outlet will supply 3 Amps max with a total of 4.5 Amp max draw collectively.

An isolator switch is located directly below the power outlets and can be used to turn off all power to the booth.

Airflow and Handling

The air handling ventilation system is designed to provide a minimum of 10 air changes per hour when the unit is occupied, per Business & Institutional Furniture Manufacturer's Association (BIFMA) Guidance for Pods (2020) and American Society of Heating Refrigerating and Air Conditioning Engineers (ASHRAE) 111 Testing, Adjusting, and Balancing of Building HVAC Systems.

On the QT has been designed to perform 35 (short booth) and 30 (tall booth) air changes per hour (ACH).

Ventilation fans are rated at 21.9 CFM and 21.5 dBA.

Tip: Fan CFM ratings alone cannot be used to determine the actual system ventilation rate.

Building and Fire Code Compliance

Seismic considerations: For seismic considerations, the building's Structural Engineer of Record (SEOR) must be consulted. Seismic structural analysis report prepared by a licensed professional engineer may be required for specific locations.

Fire suppression: Sprinkler requirements are an important consideration for product assembly. Local codes may impact the number and location of mandated sprinklers. It is important to check with the local authorities to ensure product installation meets local requirements. If required, sprinkler location options within the unit are identified in product-specific assembly directions.

This may require a visible and/or audible notifier within the unit. If the unit is equipped with a fire detection system, some jurisdictions may require it be connected to the building's fire detection system.

Product Details

Two-tone contrasting upholstery option is available through specifying inner and outer contrasting colorways.

Tip: Inner/outer selection must stay in the same fabric family.

Patterned fabric works best when specified on the seat only. Patterns should be avoided on the upper and lower body due to predominant double stitch seams making pattern matching unachievable.

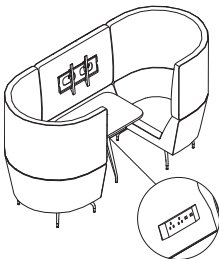

Reveal seam matches seat as standard but can match body finish or "other." Other allows specification to be independent of the seat and body finish selection.

Tip: Reveal seam not allowed to match seat when patterned.

Tip: Reveal seam may only be vinyl if body is also vinyl.

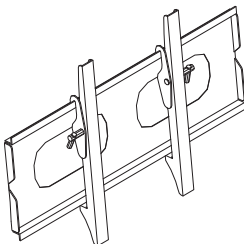

Power and Media

Power integrated in lower screen when optioned on media den units.

- 4 power outlets
- 2 power, 1 CAT6 data, 1 dual USB-A outlets
- 2 power, 1 CAT6 data, 1 HDMI outlets
- 2 power, 2 CAT6 data outlets

72" cord length exits through bottom of lower screen and comes fitted with a standard NEMA 5–15 plug.

Tilting monitor brackets available as an option on media den units. Monitor bracket supports a single screen up to 32" and 44 pounds.

Power and Media

Round power modules are available as an option on table tops, table bases, and arm:

- 2 power outlets
- 1 power, 1 dual USB-A outlets
- 1 power, 1 HDMI outlets
- 1 power, 1 CAT6 data outlets

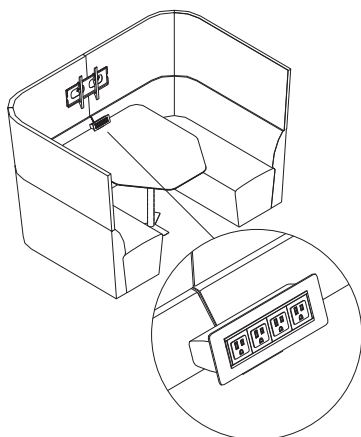

Table mounted power is available as an option for booth style numbers:

- 4 power outlets
- 2 power, 1 CAT6 data, 1 dual USB-A outlets
- 2 power, 1 CAT6 data, 1 HDMI outlets
- 2 power, 2 CAT6 data outlets

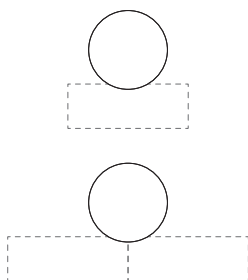

120" cord length exits through base of the tables and arms and comes fitted with a standard NEMA 5-15 plug.

Tilting monitor brackets available as an option on media den units. Monitor bracket supports a single screen up to 32" and 44 pounds.

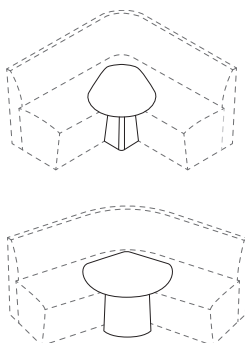

Application Topics

Handedness of units and connection points are determined based on the user sitting position.

Arms can only connect to the outer most ends of a configuration.

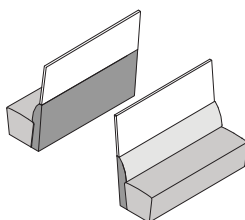

Tables can connect to the center of a single unit or at the junction between units.

Dedicated tables AD-71 and AD-72 can only be specified for use with 90° and 120° units respectively.

Surface Materials

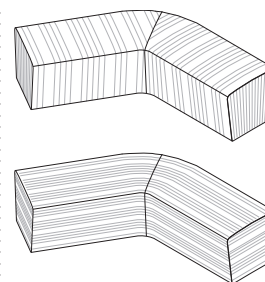

Contrasting upholstery option possible through specifying each surface independently.

The four main upholstery surfaces are:

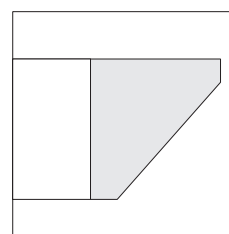

- Seat
- Backrest inner
- Backrest outer
- Screen

Patterned fabric works best when specified on the seat or inner back only. Patterns should be avoided on the outer back and screen due to predominant double stitch seams making pattern matching unachievable.

Away from the Desk is upholstered utilizing the width of fabric rolls. This means when a pattern is specified it will always lie railroad.

The use of patterned fabrics on curved units may result in the "chevron effect". This effect is apparent at the seam of two fabric panels that run in different directions.

Edge profile is tapered as standard on tables and tablets.
