

Overhead Tent

Architecture + Space Division

Steelcase

Overhead Tent provides a dynamic and airy layer of privacy to social and collaborative spaces. Its soft and light form adds visual interest to any space while providing comfort and shielding, allowing people to feel a sense of privacy while meeting or socializing in the open.

Features

Aluminum Frame

A flexible aluminum frame and spine provides the stable framework for the wave-like shape while adding a unique visual aesthetic.

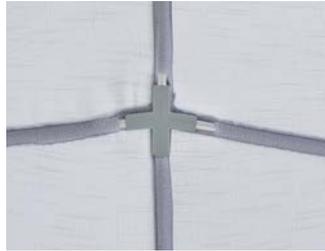

Easily Movable

Built-in handles on the freestanding base makes it easy to move Overhead Tent around a floor plan, while allowing for variations in height and width.

Intuitive Assembly

A single layer of fabric, aluminum poles and two bases make it easy for two people to quickly assemble an Overhead Tent – no tools needed.

Connectors

Plastic connection points are strategically placed to secure the frame, helping to keep the shape intact.

Sustainability

The fabric can be replaced to change the colour of Overhead Tent while re-using the existing poles and structures.

Availability and Manufacturing

Steelcase Overhead Tents are manufactured in Reynosa, Mexico, by Steelcase for the EMEA market (Europe, Middle East and Africa).

Surface Materials

The organic, wave-like shape combined with the sheer materiality of Overhead Tent adds a light and airy visual aesthetic to the modern workplace.

Fabric

Overhead Tent is available in three sheer options:

Poles and Frame

Connectors

The standard lead time offers the following options: Sheer White or Sheer Platinum with Platinum Metallic base.

All other colors and fabric combinations are available with a longer lead time.
