

Introducing Nooi

Ample versatility comes in stackable, linkable form with Nooi by Wiesner Hager. This flexible chair sits well in populated cafés, waiting spaces or anywhere in between. Its innovative interlocking frame lets you join numerous chairs together or stack up to 15 fast.

Simple yet unique, Nooi provides the functionality and comfort users want.

About Nooi

Cool + contemporary

Designed in Europe and made in America, Nooi gives you creative freedom to ensure a consistent look throughout the building architecture.

Plentiful possibilities

Take your pick from different styles and heights: standard frame linking chairs (with or without arms); café chairs; sled base chairs; or bar-height and café-height stools. The shell features a high-gloss exterior and textured interior in 10 color combinations. Add an upholstered seat or back cushion to further optimize design and comfort.

Efficient + mobile

Setting up Nooi is quick and easy. Place chairs individually or attach multiple together in a row. When joined, the clever interlocking system displays fewer visible legs for a clean aesthetic.

And when it's time to pack up, store Nooi upright in stacks of 15.
