

Ology Height-Adjustable Bench

Optimize space. Enhance wellbeing.

As organizations seek to balance space compression with employee wellbeing, the integration of height-adjustable benches will continue to grow. Ology™ height-adjustable benches support the physiology and biology of workers in any health-conscious work environment, regardless of size, layout or footprint.

PROTECTING WORKFORCE BIOLOGY

80% of infectious diseases can be transmitted by touch. Ology addresses the most frequently touched surfaces with optional antimicrobial protection that is up to 99% effective in inhibiting the growth of microorganisms.

IMPROVING WORKPLACE PHYSIOLOGY

Every aspect of Ology has been designed to promote user movement and wellbeing, including two controller options—Simple Touch and Active Touch.

Ology's Simple Touch controller allows users to effortlessly move the desk up or down without taking their eyes off their work, while Active Touch reminds workers to change posture with Active Motion, subtle desk movements that remind users to maintain posture. Users create a profile with preset desk heights and preferred intervals of sitting and standing, and the Bluetooth-enabled controller seamlessly pairs with the Rise mobile app so users can take their presets with them and track their level of activity over time.

The integrated rail supports ergonomic tools such as lighting, monitor arms, screens and worktools.

The power access door offers effortless access to three power outlets and two USB ports that provide two amps of power per port.

The soft edge embedded in the worksurface provides support for wrists and forearms to reduce stress on the neck and shoulders.

Basic-height lifting columns are available to support additional applications and lower price point.

Combo benches allow the choice of extended-height, basic-height or fixed-height lifting columns per workstation.

Single-sided benches are available to work in aiseways and around building columns.

PRIVACY OPTIONS

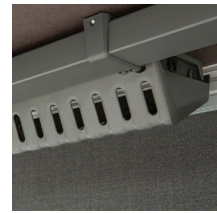

Centered screens are available for Ology benches and easily connect to the cable tray. Screens meet two overall heights, 42" and 48". Infills can be positioned at the end of a run or in line to conceal power and data infeed.
