

Product pictured is not the exact style of the product studied in this document.

Accord™

Product Environment Profile is an environmental declaration according to the objectives of ISO 14021. Precise, accurate, verifiable and relevant information on the sustainability attributes of Accord. Discover the convenience of Accord — a frameless, mixed-media collaborative board combining the durable dry erase surface of CeramicSteel with a sound-absorbing tackboard.

The model chosen for analysis from Accord range is Style # PVMRGE

Final Assembly Location

Final assembly of Accord is in New Philadelphia, Ohio for the Americas market.

CeramicSteel Recycled Content ⁽¹⁾

- Pre-Consumer: 46%
- Post-Consumer: 6%
- Recyclability⁽²⁾: 47%

Sound-Absorbing Recycled Content ⁽¹⁾

- Pre-Consumer: 35%
- Post-Consumer: 60%
- Recyclability⁽²⁾: 100%

Product Certifications and Labels ⁽³⁾

- SCS Indoor Advantage™ Gold
- VOC emissions: CDPH Standard Method V1.2
- Formaldehyde emissions: Oeko-Tex Formaldehyde Class E1

Material Certifications

- Cradle to Cradle Certified® Bronze
- ISO 14001 Environmental Management
- HDPC
- Declare

Plant Certifications

- ISO 14001 - New Philadelphia, OH

Accord may contribute to the following building standards and initiatives ⁽⁵⁾ in the following ways, depending on options.

Potential contribution area	LEED® Credit	The WELL Building Standard® Feature
Recycled Content CeramicSteel: Pre-consumer: 46%, Postconsumer: 6% Sound-Absorbing Material: Pre-consumer: 35%, Postconsumer: 60%	BPDO - Sourcing of raw materials, furniture and medical furnishings	
CeramicSteel: SCS Indoor Advantage Gold Sound-Absorbing Material: CDPH Standard Method V1.2 compliant	Low-emitting materials	Feature 04
Materials Transparency HPDC (Health Product Declaration Collaborative)	Accord may meet the furniture and medical furnishings credit of LEED. Pre-checked for LEED v4 Material Ingredients Option 1 and Option 2	

⁽¹⁾ Calculations of recycled materials exclude packaging and are based on data provided by professional organizations, suppliers and other available information. Recycled materials are determined by weight and defined in accordance with ISO 14021. This data may include industry averages, ranges or other broadly-based information. Polyvision makes conservative assumptions when compiling this information to provide the most accurate recycled content calculations possible but variability in market conditions or manufacturing processes may result in higher or lower content. This document will be reviewed and updated periodically and is subject to change without notice. Recycled content may include pre- and post-consumer materials:

Pre-consumer materials (or post-industrial recycled materials) are materials diverted from the waste stream during a manufacturing process. Excluded is reutilization of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it.

Post-consumer materials are materials generated by households or by commercial, industrial and institutional facilities in their role as end-users of the final product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.

⁽²⁾ In locations where recycling is available. To be compliant with applicable regulations, Polyvision calculations are based on the materials having physical properties that allow recycling, our evaluation of the ability to disassemble the products and the actual availability of recycling services in the markets where the products are sold. Polyvision offers services to assist customers with end-of-use options including resale, refurbishment, charitable donation, and recycling.
