Surface Materials Reference Manual February 2026

The Finish Library can be found at *www.steelcase.com/finishlibrary/*

Resources—The Fine Print, in the back of this manual, contains a wealth of information about our surface materials.

▶For a list of all trademarks, refer to the last page of this reference manual.

Surface Materials Overview

Steelcase
February 2026

Our Surfaces Offering
Smart, simple, and functional

Color Matters
Three simple ideas helped create a palette that works: the color or hue, the value from light to dark, and our hard surface offering creates a common color logic shared across material types.

Wherever you find inspiration, our hard surface offering has a choice for you: warm or cool; red, green, blue or yellow; light to dark.

As color theory goes, the closer a color gets to neutral the greater its ability to cross over multiple color families. Our neutral palette does that. Add some metallics to the mix and you have neutral colors that work in any space.

Choice Matters
It all works together. And we meant for that to happen. Finishes coordinate – laminate colors and patterns are created to match with or coordinate with paint and plastic colors. Our textiles were designed to work with our hard surfaces.

Choose any architectural elements for a space, and our surfaces will coordinate with them.

Creativity Matters
At the end of the day, it's all about you.

At first glance, the hard surfaces offering may appear to be a group of simple beiges and greys. It is this offering of crisp, clear neutrals are designed to help the design professional by facilitating, not inhibiting, design freedom in their environments. A wide range of textiles offer the ability to make a statement and add color within a space. Anything is possible – well, almost anything – and if there is a need for a unique solution that our regular offering does not address, our Custom Surfaces program can help satisfy your creativity.

The Earth Matters
We live by a set of environmental design objectives to guide our product development work. These objectives include product durability, recycled content and recyclability, elimination of harmful materials and indoor air quality impact, use of sustainably harvested woods, reduction of energy use, and product end of life strategies. These objectives are intended to drive us forward so that each new product will have stronger environmental properties than the one it replaces.

Dovetail by Designtex

Dovetail by Designtex is a price group 2 textile collection that offers a soft color palette with a subtle heathered visual. The colors pair well with our paint portfolio, allowing for monochromatic design. Dovetail by Designtex can be used across a range of products including both seating and vertical applications. For inspiration on how to leverage this material in your space, click here (link to Finish Library palette) https://www.steelcase.com/palettes/dovetail-by-designtex.

SoftNext

Meet our multi-use collection called SoftNext. SoftNext is 100% post-consumer recycled polyester. This textile can be used across a range of products including both seating and vertical applications. SoftNext is a new price group 2 textile that is both visually soft and soft to the touch. It provides subtle color mixing with a beautiful heathered texture and matte finish. For inspiration on how to leverage this material in your space, click here (link to Finish Library palette) https://www.steelcase.com/palettes/softnext.

Café

Café leather is a standard leather available in seven colors. It features a two-tone color design and offers a rich color palette. Its warm and inviting visual provides an updated range of choice within our standard leather offering. Café is a price group leather 1 and is available across seating applications. For inspiration on how to leverage this material in your space, click here (link to Finish Library palette) https://www.steelcase.com/palettes/caf%C3%A9.

Composite Veneer | Eight New Colors

Composite veneers are a natural product utilizing veneers from faster-growing tree species like Obechee. Veneer flitches are laid to emulate veneer species like oak, cherry, maple, and walnut. The faster growth allows for more consistent grain designs with less variations due to knots and slower-growth. Composite veneers are a great option for customers desiring a natural product while needing consistency in color and grain design across multiple products and applications.

New Colors in Foundation | Select Surfaces

Expanding our Foundation palette with new colors in our Select Surface portfolio. These new color introductions were developed by finding inspiration from our comforts of home and our connections to nature. Foundation is a vinyl upholstery that does not contain harmful phthalates or flame retardants. This material has the same performance characteristics vinyl has always been able to provide. Foundation's leather-like grain design provides a highly cleanable material that is ideal for specification in health and learning environments. Performance is not an afterthought, applied by means of posttreatment or topcoat that alters the look and feel of the material, but rather is embedded in the design. As a non-woven fabric, this material is also bleach-cleanable.

New Colors in Stand In | Select Surfaces

Expanding our Stand In palette with new colors in our Select Surface portfolio. These new color introductions were developed by finding inspiration from our comforts of home and our connections to nature. Stand In is a polyurethane (PU) with a leather-like grain design. The material does not contain solvents including PVC, PFAS, heavy metals, or flame retardants. Its coated design makes this an ideal material for highly cleanable performance applications such as health or learning environments. It can be specified across our seating portfolio.

Neutral Paint Colors

We've added a selection of grounding neutrals that balance our paint portfolio and present a set of timeless, warm, and soft tones that often resemble places of comfort. These new neutrals can act as a foundation for bright accents or be layered together in tone-on-tone combinations.

Accent Paint Colors

We've added new accent paint colors that were carefully designed to evoke different aspects of nature's beauty from the world around us. Colors that can seamlessly layer and support other materials, without being the spotlight.

Surfaces Made Simple

Our Surface Materials

Our offering is presented in an easy to understand availability framework.
– Steelcase Surfaces
– Select Surfaces
– Custom Surfaces

Steelcase Surfaces

Timeless, tried and true.

These are the surface choices that make up our standard offering. Steelcase Surfaces are categorized into three life cycle categories:

1) **Active:** Current surfaces that we actively promote: *Classics* – our go-to designs, made for standardization. *Inspire* – surface materials with unique attributes, like aesthetics, environmental properties, etc.
2) **Excluded:** These are Steelcase surface materials that are no longer part of the active offering. While they may still be available for customers who previously standardized on them, they are not recommended for use in new projects. Availability varies by material and product line. Please refer to the product specification guides for detailed information. *Note: These finishes may be excluded from some marketing tools such as sets and swatch cards.*
3) **Transitional:** Surfaces with an identified end of life timeframe. Whenever possible, cull dates have been assigned.

Select Surfaces

Extension of choice.

We have expanded our ability to offer choice by partnering with best-in-class companies, in conjunction with the Steelcase Design Studio, to use their products on ours in a facilitated way. No testing, no calculating yardage, and no adding a line item for the extra textile cost as all of this has already been done. It is our plan to continue to grow this offering so that we may continue to make it easy and beautiful to use Steelcase.

Custom Surfaces

Even with the choices we offer through Steelcase and Select Surfaces, we know that sometimes there is a need to provide customers with a solution that is uniquely theirs.

Custom Surfaces are things like:
• COM (Customer's Own Material)
• Open Line Laminate
• PerfectMatch paints
• Customiz stain

Global Palette Overview

Steelcase
February 2026

Global Palette Overview

Global Palette Overview

A core collection of finishes that is available across multiple geographies and on relevant product lines. The palette offers materials that have been selected to coordinate with one another and are easy to specify. They are globally appropriate, familiar, and available to order on Steelcase product lines around the world.

Why

To improve the overall experience for our global clients and allow them to create a consistent brand wherever work happens. Internal branding plays an important role in corporate spaces and our customers are motivated by a growing desire to have consistent representation of the company culture and values across all geographies – the global palette provides a consistent look and feel to help reinforce a common brand and culture.

Where

Geographies include the Americas – North, Central and South; EMEA – Europe, the Middle East, and Africa; and APAC – Asia Pacific. Not all finishes are available on all product lines, in all geographies. Use the matrices in this reference manual to help with application approval and availability across the different regions. For details on how to order product in each geography, regional specification guides should be referenced.

What

Paint – the foundation for design in a space and consequently, the foundation of materials choice within the global palette. To ensure a balanced and complete offering, we have considered color family, value, range, neutrality, and global trends.

Laminate – an intentional selection of laminates has been selected to coordinate with the global paint offering.

Plastics – from classic neutrals to fundamental color selections, the seating plastic choices coordinate with paints, laminates, and other finishes in the global palette.

Textile/Knit/Mesh – a wide range of color, texture, and patterns are included in the textile/knit/mesh offering, please refer to page 10 for more details.

Other

We will continue to stay close to global material trends and make enhancements to the offering.
For samples, visit your regional Steelcase Marketing Resources site or contact your local Steelcase representative.

Textile Global Palette Collection Overview

Below is a list of finish numbers, by geography, for materials within the global palette. Not all finishes are available on all product lines, in all geographies. Use the matrices in this reference manual to help with application approval and availability across the different regions. For details on how to order product in each geography, regional specification guides should be referenced.

February 2026

Global Color Conversion Matrix by Geography, continued

Below is a list of finish numbers, by geography, for materials within the global palette. Not all finishes are available on all product lines, in all geographies. Use the matrices in this Reference Manual to help with application approval and availability across the different regions. For details on how to order product in each geography, regional specification guides should be referenced.

Tip: Three specific regions are included in the "Americas" - North, Central, and South America.

Tip: The acronym EMEA stands for Europe, the Middle East, and Africa.

Tip: The acronym APAC stands for Asia Pacific.

Note: Gaja, Remix, and Steelcut Trio can be ordered as a pre-approved special on applicable product lines in APAC.

Note: Not all finishes are available on all product lines, in all geographies. For details on how to order product in each geography, regional specification guides should be referenced.

Steelcase Surfaces Program

Steelcase
February 2026

Steelcase Materials Overview

Surfaces

Paint brings color to metal surfaces and provides them with a high-quality finish that is fade and chip resistant.

- **Smooth paints** provide saturated color to painted surfaces. Gloss levels range from 25% to 40%. Gloss levels for Lux Coatings range from 10% to 60%.

- **Textured paints** provide a subtle visual and tactile enhancement to painted surfaces. Textured paints have a 6% gloss level.

- **Metallic paints** bring richness to painted surfaces by the inclusion in the paint of tiny pieces of reflective material. Metallic paints are available, in most cases, with an upcharge. Please see individual product specification guides for these Price Group 2 upcharges. Metallic paints have a 40% gloss level.

- **Architectural paints** are specifically designed for use on Privacy Wall and V.I.A. These Price Group 1 paints have a 20% gloss level.

- **Accessory paints** are available on select product lines and accessory parts. These Price Group 2 high gloss finishes offer an elegant appearance through a gloss level of 85%.

- **1ATT Cast Shadow** is a subtly tinted clear-coat that allows for color range, variability, and uniqueness across parts and products. Weld marks, fingerprints, anodized streaks - and even color haze or shift - should be expected and celebrated. To ensure a full understanding of these variations, a sign-off is required and is available through Steelcase Marketing Resources (Item number 22-0000083D).

Laminates are constructed by uniting two or more layers of resin-saturated paper together and sealing them with heat and/or pressure creating an attractive yet durable worksurface.
Tip: Due to the natural variation of woodgrain color and texture, the match between woodgrain laminates and wood finishes will be a commercially acceptable match, rather than an exact match.

- **High-Pressure Laminate** (HPL) is made up of a paper-thin layer of a decorative or solid impregnated sheet with a clear overlay and three to five additional pieces of impregnated kraft paper. These materials are fused together forming a solid laminate sheet. High-Pressure Laminate is bonded to board substrate using a water-based adhesive. These laminates meet or exceed all NEMA test standards for high-pressure laminates.

- **Low-Pressure Laminate** (LPL) is made up of a paper-thin layer of a decorative or solid sheet fused to particleboard or medium density fiberboard. Low-Pressure Laminates do not meet NEMA specification requirements, scratch resistance, or ball drop tests.

Plastics are used for many product parts, ranging from seating shells and table edges to grommets and wire managers.

- **Systems plastics** include a wide variety of product parts. Some of these parts appear on the product in close proximity to laminates. This is especially true of filler strips, edge bands, and grommets. For this reason, these systems plastics are available in colors to match or coordinate with laminates and paints. Additional systems plastics are designed to coordinate with the textiles, paints, and other surface materials in the program.

- **Seating plastics** are designed for seating shells, including stacking chairs. These plastics are strong, durable, and are available in integral colors to coordinate with other finishes in the Steelcase Surface Materials Program.

Metal finishes are designed for use on specific metal parts such as hardware on selected Steelcase product lines. They offer a high-aesthetic, high-value appearance, and are available in colors to coordinate with other finishes in the Steelcase Surface Materials Program.

Woods include Cherry, Maple, Oak, and Walnut veneers and solids in a palette of light, medium, and dark tones. Additional wood finishes on exotic veneer are available on select products. Wood is a natural material and variations will occur in color, grain structure, and texture.

Premium Veneers

A selection of Premium Veneers in this collection are available on most Steelcase brand products. The collection is Wood Group 3 as part of our Select Surfaces program, and supported like standard veneers to make ordering easy. Please see the Steelcase surface materials section on *village.steelcase.com* for sample information and product line availability. All Premium Veneers are in clear-coat.

Wood Finishes
- **Full-fill finish** is a medium-gloss wood finish that fills the grain texture, yet allows the grain pattern to be seen. The wood has a lustrous, satiny look and it is smooth to the touch. Full-fill finishes are available on worksurfaces only. Finish numbers that end with a **4** have a full-fill finish.
- **Open-pore finish** is a medium-gloss wood finish. The woodgrain texture is visible to the eye and distinguishable to the touch. Finish numbers that end with a **2** have an open-pore finish.

Veneers and Solids

- **Wood** will develop a deep, rich patina over time as the wood ages. Mineral streaks, gum pockets, and pin knots are some of the unique characteristics that are visible in veneers and solids.

- **A solid wood furniture component** is, as the name implies, natural wood throughout the whole wood part. Panel top caps and end trim and worksurface edges are examples of solid wood components.

- **A veneer** is a thin sheet of wood that is used as the outer surface material to achieve a wood aesthetic.

- **Composite veneers** are a natural product utilizing veneers from faster-growing tree species like Obechee. Veneer flitches are laid to emulate veneer species like oak, cherry, maple, and walnut. The faster growth allows for more consistent grain designs with less variations due to knots and slower-growth. Composite veneers are great option for customers desiring a natural product while needing consistency in color and grain design across multiple products and applications.

Wood Seating

- The wood used in the construction of wood seating is either Maple or European Beech. Wood finishes applied to these solid components will match the color of Oak, Cherry, Walnut, or Maple veneers of the same finish name and number, but will not have the same grain characteristic.

Textiles

Textiles feature seating upholstery and vertical surface fabrics in a wide range of designs, colors, and prices.
▶ For the most up to date availability information, please visit *finishlibrary.steelcase.com*

- **Woven/knit textiles** are flexible materials consisting of a network of interlacing natural or artificial fibers.

- **Leather/coated materials** are fabric-like materials made of fiber that are bonded together by chemical, mechanical, heat, or solvent treatment.

Maple

3522	FC/OP Clear Maple*	**3544**	FC/FF Blonde on Maple ℰ
3524	FC/FF Clear Maple* ℰ	**3592**	FC/OP Blonde on Maple ℰ

⊕ = This finish is part of the global surface materials palette. Geographical differences, by product line, may apply.

ℰ = Excluded

Walnut

3062	FC/OP Graphite Walnut	**3754**	FC/FF Medium Walnut ⓔ
3064	FC/FF Graphite Walnut ⓔ	**3762**	FC/OP Dark Walnut
3702	FC/OP Clear Walnut	**3764**	FC/FF Dark Walnut ⓔ
3704	FC/FF Clear Walnut ⓔ	**3772**	FC/OP Medium Mahogany
3712	FC/OP Natural Walnut		on Walnut
3714	FC/FF Natural Walnut ⓔ	**3774**	FC/FF Medium Mahogany
3752	FC/OP Medium Walnut ⓔ		on Walnut ⓔ

Wood is a natural material, and variation will occur in color, grain pattern, and character marks. These can be seen more prevalently in finishes with only a clear coat. Because no stain is used in the clear-coat process, a sign-off will be required prior to orders being accepted for this finish. The sign-off sheet is available through Steelcase Marketing Resources.

Wood Finishes on Quarter-Cut Veneer
Ash

3042	QC/OP Ash* ⓔ

Maple

3222	QC/OP Clear Maple*	**3292**	QC/OP Blonde on Maple ⓔ
3224	QC/FF Clear Maple* ⓔ	**3294**	QC/FF Blonde on Maple ⓔ

Wood Finishes on Quarter-Cut Veneer
Walnut

3302	QC/OP Clear Walnut	**3364**	QC/FF Dark Walnut ⓔ
3304	QC/FF Clear Walnut ⓔ	**3372**	QC/OP Medium Mahogany
3312	QC/OP Natural Walnut		on Walnut
3314	QC/FF Natural Walnut ⓔ	**3374**	QC/FF Medium Mahogany
3352	QC/OP Medium Walnut ⓔ		on Walnut ⓔ
3354	QC/FF Medium Walnut ⓔ	**3382**	QC/OP Graphite Walnut
3362	QC/OP Dark Walnut	**3384**	QC/FF Graphite Walnut ⓔ

Tip: Be conscious if mixing the flat-cut and the quarter-cut in composites; there may be large variation.
Tip: Full-fill finishes are available on worksurfaces only (upcharge may apply).

Wood is a natural material, and variation will occur in color, grain pattern, and character marks. These can be seen more prevalently in finishes with only a clear coat. Because no stain is used in the clear-coat process, a sign-off will be required prior to orders being accepted for this finish. The sign-off sheet is available through Steelcase Marketing Resources.

Wood Finishes on Rift-Cut Veneer
Oak

3602	RC/OP Desert Oak	**3604**	RC/FF Desert Oak ⓔ

Tip: Rift cut open-pore finish choices, known for their color consistency, feature a clear coat finish. Because the veneers are sourced in large lots, overall color within a specific purchase order should have minimal color inconsistency. However, composite customers should know that colors may vary slightly from dye lot to dye lot. This inconsistency may be noticed when replacement pieces are ordered that may be from different dye lots, or when a new product phase is installed. Also note that composite veneers tend to fade and lighten over time, especially with sun exposure.

Tip: Full-fill finishes are available on worksurfaces only (upcharge may apply).

Natural Veneer
Wood Group 1

32A2	QC/OP	Blanch Maple	**35A2**	FC/OP	Blanch Maple
33A2	QC/OP	Thunder Walnut	**36A2**	RC/OP	Volcanic Oak
3342	FC/OP	Black Walnut	**37A2**	FC/OP	Thunder Walnut
3392	QC/OP	Black Walnut			

Wood Group 2

3394	QC/FF	Black Walnut ⓔ	**3734**	FC/FF	Black Walnut ⓔ

Wood Group 3

3082	FC/OP	Washed Walnut	**3084**	FC/FF	Washed Walnut ⓔ

Tip: To ensure an understanding of the color ranges and characteristic variations of wood group 3 natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase Marketing Resources.

Planked Veneer
Wood Group 1

3P41	OP Planked Cherry	**3P61**	OP Planked Oak
3P51	OP Planked Maple	**3P71**	OP Planked Walnut

Tip: Known for its uniqueness, planked veneer has intentional and natural variations that include, but are not limited to: character marks, grain pattern, color, and natural color aging. Because no stain is used in the clear-coat process, a sign-off will be required prior to orders being accepted for this finish. The sign-off sheet is available through Steelcase Marketing Resources.

Premium Wood
Wood Group 3

3832	QC/OP Figured Anegre

Tip: Full-fill finish is not available on premium veneers as a standard. To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase Marketing Resources.

T620	Arctic Ermine		

⊖ = Excluded

⊕ = This finish is part of the global surface materials palette. Geographical differences, by product line, may apply.

Availability Matrices

Use these matrices to get a quick overview of what product lines each material can be applied to. Please see individual specification guides for more specific information on surface material availability.

Legend Explanation

• = **Not available**
No product line components are available for the surface material listed.

■ = **Available**
All product line components are available for the surface material listed.

□ = **Available with exceptions**
Some product line components are available for the surface material listed. However, not all components are available with this material.

▦ = **COM approved**

*PerfectMatch paint is a program that allows you to create your own color on Steelcase painted products.
**1ATT Cast Shadow is a subtly tinted clear-coat that allows for color range, variability, and uniqueness across parts and products. Weld marks, fingerprints, anodized streaks—and even color haze or shift—should be expected and celebrated. To ensure a full understanding of these variations, a sign-off is required and is available through Steelcase Marketing Resources.

Tip: For the most up to date availability information, please visit finishlibrary.steelcase.com.
Tip: Products that are missing from the matrix are not available with these surface materials.
*PerfectMatch paint is a program that allows you to create your own color on Steelcase painted products.
**1ATT Cast Shadow is a subtly tinted clear-coat that allows for color range, variability, and uniqueness across parts and products. Weld marks, fingerprints, anodized streaks—and even color haze or shift—should be expected and celebrated. To ensure a full understanding of these variations, a sign-off is required and is available through Steelcase Marketing Resources.

Tip: Products that are missing from the matrix are not available with these surface materials.
Tip: Not every plastic component is available in every plastic color. The matrix above gives an overview of the plastic colors available on each product line.
Tip: Light color plastic edges are susceptible to degradation due to normal wear and tear. Staining (e.g. ball point pen or clothing dyes such as blue jeans) and dirt effects are more pronounced on light colors and are not considered defects.
Tip: For the most up to date availability information, please visit finishlibrary.steelcase.com.

Tip: Products that are missing from the matrix are not available with these surface materials.

Tip: Not every plastic component is available in every plastic color. The matrix above gives an overview of the plastic colors available on each product line.

Tip: Light color plastic edges are susceptible to degradation due to normal wear and tear. Staining (e.g. ball point pen or clothing dyes such as blue jeans) and dirt effects are more pronounced on light colors and are not considered defects.

Tip: For the most up to date availability information, please visit finishlibrary.steelcase.com.

Tip: Products that are missing from the matrix are not available with these surface materials.

Tip: Full-fill finishes are available on worksurfaces only (upcharge may apply).

Tip: Solid hardwoods cannot be used with wood composites, so no shaped wood worksurface profiles, wood integral pulls, or wood panel trim may be optioned when composite veneer finishes are specified. For more information on composite veneers, please reference the specification guides for the product lines they available on.

*Tip: Known for its uniqueness, planked veneer has intentional and natural variations that include, but are not limited to: character marks, grain pattern, color, and natural color aging. Because no stain is used in the clear-coat process, a sign-off will be required prior to orders being accepted for this finish. The sign-off sheet is available through Steelcase Marketing Resources.

* See *Coalesse Surface Materials Reference Guide* for more information on this finish.

**To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase Marketing Resources.

Tip: Wood used in the construction of chairs comes from maple or European beech. Wood finishes applied to maple or beech will match the color of stains applied to oak, walnut, or cherry; however, they will not have the same natural grain.

Tip: Products that are missing from the matrix are not available with these surface materials.

Amia 482 Series sewn version models with leather or vinyl require an "S" suffix which features an additional stitch detail across the lumbar region on the back cushion.
Brody 488 Series vertical fabrics can be found in the *Vertical Surface Fabric Matrix* on page 122.
Brody Lower Surround with Extension is not available with Brisa, Remix, or Steelcut Trio because they do not meet ASTM E-84 flammability standards.

Test Standards and Technical Information

Steelcase maintains high standards for surface materials through extensive testing conducted in our own and independent laboratories. Our materials meet or exceed all industry standards. We are committed to providing materials of the highest quality that preserve the safety and well-being of our customers.

Test Standards and Technical Info

Test Standards

All Steelcase surface materials are tested to ensure that they meet or exceed all appropriate industry and Steelcase standards. Through testing, we are able to offer our warranty with confidence, knowing that our products are of the highest quality.

Whenever possible, testing is done in Steelcase facilities. Independent test labs, such as Underwriters Laboratories, are contracted to perform tests which require special testing facilities or independent verification of results.

Taber Abrasion Test

Purpose: To establish that Steelcase standard textiles meet or exceed industry standards for wear.

General Description: The Taber Abrasion test is used in the contract furniture industry, but not as often as the Wyzenbeek test.

The test measurement is given in cycles, which indicate how many abrasive revolutions can be applied to a fabric before the first yarn or fibers begin to break.

The Taber Abrasion test is used both for seating upholstery and vertical surface fabrics.

- Steelcase seating upholstery fabrics must pass a minimum of 300 cycles. Many Steelcase fabrics have Taber readings that are much higher, indicating a high capacity for wear.

- Steelcase vertical surface fabrics must pass a minimum of 150 cycles. These fabrics are not subject to the same degree of wear as seating upholstery, and a Taber reading of 150 cycles is acceptable.
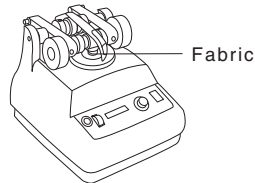

Fabric

The Taber abrasion tester is used for vertical surface textiles to test fabric wear.

Procedure: The test is performed on a Taber Abrasion machine. A square of the fabric to be tested is mounted on a flat, circular specimen holder, which is then rotated against a pair of abrasive wheels. A vacuum system removes abraded particles, and a counter indicates the number of revolutions completed. After a predetermined number of revolutions (or cycles), the specimen is removed and examined for pilling and wear under a microscope. The number of cycles is increased until the sample shows signs of yarn or fabric wear.

Test Results:
▶See pages 136–145 for test results for specific fabrics.

Testing Facility: Tests are performed in the Steelcase laboratories.

Wyzenbeek Abrasion Test

Purpose: To establish that Steelcase standard textiles meet or exceed industry standards for wear.

General Description: The Wyzenbeek test is the most commonly used abrasion test in the contract furniture industry. Steelcase seating fabrics are tested with this method to meet all industry standards.

The test measurement is given in double rubs, which indicate how many abrasions can be applied to the fabric before it begins to show loose threads or other signs of obvious wear.

The Wyzenbeek Abrasion test is primarily for seating upholstery fabrics, but it can also be used to test vertical surface fabrics.

- Steelcase vertical surface fabrics are tested with the Taber Abrasion test only.
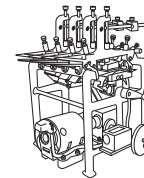

Wyzenbeek Abrasion test is the most common abrasion test used in the contract textile industry. Steelcase uses the Wyzenbeek method for seating upholstery to test fabric wear.

Procedure: Four specimens of the fabric to be tested are mounted on a foam substrate. Each sample is rubbed by an abrading surface on an oscillating cylinder. The abrading surface is wire screen mesh or cotton duck. Two specimens are tested in the warp direction, and two are tested in the fill direction.

A counter indicates the number of double rubs (cycles) completed. The specimen is examined for wear at 3,000 double rub intervals. Testing continues until the sample shows signs of wear.

Steelcase performs this test using cotton duck cloth; results for wire screen mesh tests are available on request.

Test Results:
▶See pages 136–145 for test results for specific fabrics.

Testing Facility: Tests are performed in either the Steelcase laboratories or independent laboratories.

ASTM E-84, Flammability Test

ASTM E-84/UL 723

Purpose: To establish that Steelcase vertical surface fabrics meet or exceed industry standards for fire safety. Important: This is a complete product assembly test. Therefore, an individual fabric alone is not tested by this test method.

General Description: The Flammability ASTM E-84 test determines the comparative burning behavior of exposed vertical surface textiles on assembled products. The test measurement is given as the maximum distance and time a flame travels across an ignited sample and the extent that smoke is generated.

All Steelcase vertical surface fabrics are tested, and must meet or exceed the UL or Building Code standard. When COM fabrics are specified, Steelcase makes no claims of flammability resistance and assumes no liability, unless the fabrics are tested in UL laboratories. Steelcase will not apply any vertical surface fabrics to products unless they meet UL requirements.

Procedure: Textiles are tested on actual products.

A vertical surface textile sample is placed on the product in a fire test chamber 25 feet long. Two gas burners then deliver flames upward against the surface of the sample. The fabric is allowed to burn for ten minutes and is observed through windows in the chamber's sides.

Test Results:
▶See pages 136–145 for test results for specific fabrics.

Testing Facility: Tests are performed in independent laboratories.

California Technical Bulletin 133

Purpose: To establish which Steelcase seating model combinations and standard upholstery meet California Technical Bulletin 133 (TB 133) requirements. Important: This is a complete product assembly test. Therefore, an individual fabric is not TB 133 approved.

General Description: California Technical Bulletin 133 (TB 133) is a full scale fire test for seating products manufactured for use in certain public buildings. The test measures the amount of heat generated and the rate at which it is generated. In addition smoke opacity, carbon monoxide generation, and temperature are measured in the test room, as well as the weight loss of the product being tested. Test criteria have been developed that set limits on each of the measurements that are listed.

When COM fabrics are specified, Steelcase makes no claims of flammability resistance and assumes no liability unless the fabrics and seating model are evaluated in independent laboratories.

Procedure: TB 133 tests furniture that includes all of its essential features. A finished piece of furniture is placed in a test room and ignited by a gas ignition burner.

Testing Facility: Tests are performed in independent laboratories.

California Technical Bulletin 117–2013

Purpose: To establish that all standard Steelcase seating textiles meet or exceed industry standards for flammability.

General Description: This is a simple test that takes place in a standard flammability cabinet. All Steelcase textiles must pass this test. When COM fabrics are specified, Steelcase makes no claims of flammability resistance and assumes no liability, unless the fabrics are tested in Steelcase laboratories.

Procedure: The material is evaluated by placing the fabric over standard polyurethane foam. A lighted cigarette is placed in the crevice formed by the vertical back and horizontal seat cushion. Smoldering resistance is measured by certain criteria to determine compliance.

Testing Facility: Tests are performed in the Steelcase laboratories and independent laboratories.

Weight of Woven Fabric Test

Purpose: To determine the weight of fabrics per linear yard.

General Description: Steelcase weighs woven fabrics to ensure that they meet or exceed industry standards and to ensure product consistency. Fabric weights may vary slightly from lot to lot due to production and processing variations.

Procedure: Fabric is cut to a one square foot size, folded, weighed to the nearest 0.1 ounce, and the weight is recorded. Weighing occurs under standard controlled conditions for temperature and humidity.

Test Results:
▶See pages 136–145 for test results for specific fabrics.

Testing Facility: Tests are performed in the Steelcase laboratories.

Test Standards and Technical Info

Colorfastness to Crocking

Purpose: To establish that the dyes from textiles will not be transferred to other surfaces, such as clothing and other surfaces in the environment, by rubbing or repeated contact.

General Description: This test is applicable to all colored textiles, whether dyed, printed, or otherwise colored. Steelcase tests fabrics for two types of crocking: dry (color transfer from a dry specimen) and wet (color transfer from a specimen that has been saturated with distilled water).

All Steelcase standard textiles meet or exceed industry standards for wet and dry crocking.

Procedure: The colorfastness to crocking tests require two samples of the fabric to be tested (one sample each for the dry and wet tests). Both tests use a standard crockmeter, which holds the sample in place and then rubs it against a white test cloth, for 10 rubs, under controlled conditions.

In the dry crocking test, the sample white cloth is removed at the completion of the test, and any color that has transferred to it is assessed by comparison with the AATCC (American Association of Textile Chemists and Colorists) Chromatic Transference Scale or Grey Scale for Staining.

The same procedure is followed for the wet crocking test, only a specific portion of the test sample is saturated with distilled water before the rubs begin. At the completion of the test the white cloth is removed and allowed to dry before comparison with the AATCC Chromatic Transference Scale or Grey Scale for Staining.

Test Results: Test results are available on request.

Testing Facility: Tests are performed in the Steelcase laboratories.

Colorfastness to Light

Purpose: To establish that Steelcase standard textiles will retain their color after continuous exposure to light.

General Description: The colorfastness to light test is applicable to all Steelcase standard textiles and for colorants, finishes, and treatments applied to textile materials.

Colorfastness for all Steelcase textiles is Class 4 or better, which meets or exceeds industry standards.

Procedure: The colorfastness to light test requires one sample of the fabric to be tested. The specimen is mounted on a holder and a portion of it is covered, to provide comparison to the exposed area. The specimen is then continuously exposed to the light of a carbon arc lamp with a specified output of ultraviolet light at a controlled distance for 40 hours. At the completion of the test the specimen is uncovered, removed, and examined for visible fade.

Test Results:
▶See pages 136–145 for test results for specific fabrics.

Testing Facility: Tests are performed in the Steelcase laboratories.

ACT Textile Performance Guidelines

The Association for Contract Textiles addresses issues related to contract fabrics. ACT member companies focus their business on the contract interiors market. This market is important to Steelcase and we are an associate member of the Association for Contract Textiles.

Steelcase supports the Association for Contract Textiles performance guidelines. The surface materials sampling program shows the ACT symbols because our materials meet or exceed the ACT performance guidelines. Steelcase materials are tested to meet Steelcase test standards and the ACT performance guidelines.

The six symbols give end-users performance information in a visual way.
▶See pages 133–135 for the product application, the minimum test criteria that the materials pass, and a description of the tests. This information comes from the *ACT Textile Performance Guidelines Booklet.*

Flame Resistance

Upholstery—Woven Fabrics

Passes:

California Technical Bulletin 117–2013 Section 1*

Upholstery—Coated Fabrics

Passes:

California Technical Bulletin 117–2013 Section 1*

Panels

Passes:

ASTM E 84 (unadhered method) – Class A or Class 1

Flame resistance refers to a fabric's ability to resist burning.

The flammability test is dictated by the end-use for the fabric.

The two testing methods most commonly used to measure flame resistance are the Tunnel Test (ASTM E-84) and the Cover Fabric Test (used by California Technical Bulletin 117–2013).

In the Tunnel Test, the fabric to be evaluated is clamped (unadhered method) or glued (adhered method) to a substrate. The substrate is placed on the ceiling of the test chamber and ignited by a flame from below. The fabric sample is then evaluated for the density of the smoke formed, the amount of the fuel contributed and the extent of the flame spread. Based on these factors, a rating is established.

To establish that Steelcase vertical surface fabrics meet or exceed industry standards for fire safety, complete product assemblies are tested. Although the ACT testing guidelines are based on testing fabric alone, Steelcase does not test individual fabric alone by this method.

In the Cover Fabric Test, the fabric to be evaluated is placed over standard polyurethane foam and a lighted cigarette is placed in the crevice formed by the vertical back and horizontal seat cushions. Smoldering resistance is measured by the following criteria:

1 Smoldering cannot exceed 45 minutes of test duration
2 Vertical char length cannot exceed 1.8 inches (45 mm)
3 Mock-up specimen cannot transition into open flame

Testing is completed in triplicate and all three mock-up specimens must meet all three criteria in order for the cover fabric to pass the Section 1 test.

*Per the California Bureau of Electronic and Appliance Repair, Home Furnishings and Thermal Insulation, and the Association of Contract Textiles, existing fabrics (prior to January 1, 2015) that were tested under a similar test method (ASTM, UFAC, or NFPA 260) and passed can be used in upholstered furniture and are not subject to additional testing.

Colorfastness to Wet and Dry Crocking

Upholstery—Woven Fabrics

Passes:

AATCC 8 Dry Crocking, Class 4 minimum
Wet Crocking, Class 3 minimum

Upholstery—Coated Fabrics

Passes:

AATCC 8 Dry Crocking, Class 4 minimum
Wet Crocking, Class 4 minimum

Panels

Passes:

AATCC 8, Class 3 minimum

Colorfastness is a fabric's ability to retain color in various conditions.

Crocking refers to the rubbing off of color from a fabric when subjected to abrasion.

To measure for colorfastness to crocking, the fabric to be tested is rubbed with squares of white cotton fabric (both wet and dry) under controlled pressure for a specified number of times. The amount of color transferred to the white test squares is matched to a control chart and a rating is established.

Class 5 = no color transfer
Class 1 = high degree of color transfer

Test Standards and Technical Info

Colorfastness to Light

Upholstery—Woven Fabrics

Passes:
AATCC 16 Option 1 or 3 Class 4 minimum at 40 hours

Upholstery—Coated Fabrics

Passes:
AATCC 16 Option 1 or 3 or ASTMD4329 Class 4 minimum at 200 hours

Panels

Passes:
AATCC 16A or AATCC 16E
Class 4 minimum at 40 hours

Colorfastness to light refers to a fabric's ability to resist fading when exposed to light.

To measure for colorfastness to light, the fabric to be tested is exposed under specific conditions to a controlled light source which simulates the sun's rays. At timed intervals, the test swatch is compared to a gray scale and the degree of fading is rated.

Class 5 = no fading
Class 1 = high degree of fading

Physical Properties

Upholstery—Woven Fabrics

Passes:
Brush pill ASTM D3511, Class 3 minimum

Passes:
Breaking strength ASTM D5034 (Grab Test) 50 pounds minimum in warp and filling

Passes:
Seam strength ASTM D4034
25 pounds minimum in warp and filling

Upholstery—Coated Fabrics

Passes:
Adhesion of Coating ASTM D751 Sections 45-48, 3 lbf/in minimum

Passes:
Tear Strength – Tongue Tear ASTMD2261 – Knits & Woven Substrates, 4x4 lbs
Or
Trap Tear ASTMD5733 - Nonwoven substrates and Nonwoven composites, 15x15 lbs

Passes:
Hydrolysis Resistance – Applicable to Polyurethanes only. ISO1419 (Tropical Test Method C), 5 weeks. Visual Evaluation for no cracking, peeling, or delamination.

Panels

Passes:
Breaking strength D5034 Grab Test
35 pounds minimum in warp and filling

Passes:
Seam strength ASTM D3597-D434
25 pounds minimum in warp and filling

Pilling is the formation of fuzzy balls on the surface of a fabric. Pilling occurs when loose fibers in the fabric are worked to the surface after the fabric is subjected to abrasion.

The Brush Pill Test uses nylon bristles to rub the surface of the fabric to be tested for a specific amount of time. The number of balls or pills that form on the surface of the fabric are counted and the fabric is evaluated in a 1 to 5 rating system.

Class 5 = no pilling
Class 1 = severe pilling

Breaking strength measures a fabric's ability to resist tearing or breaking when subjected to tension.

To evaluate breaking strength, the fabric to be tested is gripped by clamps at one end while weight is applied to pull it from the other end. This test is performed in both the warp and the filling directions. The number of pounds required to cause the fabric to break or tear determines the rating.

Seam strength refers to the condition when fabrics pull apart at a sewn seam.

To measure a fabric's ability to resist seam slippage, a seam is sewn in the fabric to be tested. These sewn fabrics are then clamped at one end and pulled by weights at the other end. The test is performed in both the warp and filling directions. The weight is increased until the seam separates a specified distance. The number of pounds required to cause this separation determines the fabric's rating.

Adhesion of coating is the measurement of the force required to separate the coatings from the substrate.

Tear strength is the measurement of stress exerted to rip the fabric under tension.

Hydrolysis resistance is the evaluation of a polyurethane fabric's ability to withstand exposure to extended periods of heat and humidity.

Abrasion

**General Contract Upholstery—
Woven Upholstery**

Passes: a
ASTM 3597 modified (#10 cotton duck)

Passes:
15,000 double rubs Wyzenbeek method

**Heavy Duty Upholstery—
Woven Upholstery**

Passes: A
ASTM 3597 modified (#10 cotton duck)

Passes:
30,000 double rubs Wyzenbeek method

**Heavy Duty Upholstery—
Coated Upholstery**

Passes: A
ASTM D4157 (ACT approved Cotton Duct
#10 or wire screen)

Passes:
50,000 double rubs Wyzenbeek method

Abrasion resistance is the ability of
a fabric to withstand surface wear from
rubbing.

Wyzenbeek test method (modified)

The fabric to be tested is pulled taut and
rubbed in both the warp and filling direc-
tions using a piece of cotton duck fabric
as the abradant. The number of cycles, or
double rubs endured before the fabric shows
"noticeable wear" is counted. This number
determines the fabric's abrasion rating.

15,000 double rubs = general contract
upholstery
30,000 double rubs = heavy duty upholstery

Please Note:
Multiple factors affect fabric durability and
appearance retention, including end-user
application and proper maintenance.
Wyzenbeek results above 100,000 double
rubs have not been shown to be a reliable
indicator of increased fabric lifespan.

Select Surfaces Program

Steelcase
February 2026

Select Surfaces Material Overview

Select Surfaces Finishes

Materials within Select Surfaces offer established pricing and have been pretested and pre-approved on Steelcase products. The result is an enhanced level of material choice that is also easy to order. Warranty and availability of these materials vary and are at the discretion of each supplier within Select Surfaces. Please check with the supplier for material availability and lead times.

Textiles feature seating upholstery and vertical surface fabrics in a wide range of designs, colors, and prices.

· **Woven/Knit textiles** are flexible materials consisting of a network of interlacing natural or artificial fibers.

· **Leather/Coated materials** are fabric-like materials made of fiber that are bonded together by chemical, mechanical, heat, or solvent treatment.

· **Designtex** is a celebration of imaginative minds and fact-based knowledge coming together to offer performance-based, environmental solutions. As part of Steelcase Select Surfaces, the Designtex collection includes an extensive range of choice through new product introductions, as well as fabrics previously recognized through the Designtex Select Surfaces program. This vast selection of upholstery and vertical surface fabrics provides a unique opportunity to achieve the highest level of design, sustainability, and performance.

· **Gabriel** is a niche company that develops, manufactures, and sells upholstery fabrics out of Europe. With the addition of Gabriel to the Select Surfaces offering, we extend our design choice and improve global consistency.

· **Kvadrat**, also a European supplier, creates high quality, contemporary textiles, and textile-related products. This collection of seating upholstery fabrics builds on our global offering and leverages industry leaders on a global scale.

· **Leather** in our Select Surface offering features three Select Surface leathers through our partnerships with best-in-class suppliers, Moore & Giles and Cortina. These three leathers are intended to celebrate leather as an organic material and highlight the variation that occurs naturally.

Tip: Leathers in Select Surfaces will have natural characteristics including, but not limited to: character marks, aging, patina, grain variation, etc. The intention of the program is to celebrate the natural variation of the material.

Casper Cloaking Technology by Designtex is an innovative window film that combines the science of physics and the art of design to address the workplace dichotomy between data privacy and human transparency. By selectively filtering light emitted from displays, Casper renders these displays opaque when viewed from the outside of a glass-walled room. Casper Cloaking Film protects data while still allowing quality views inside and outside of the room.

Solid surfaces create a seamless visual providing an integrated worksurface or table top option.

· **Solid surface** allows customers to achieve a design aesthetic different from the more traditional options. The introduction of solid surface consists of a curated color palette and is available on a select subset of products.

Wood veneers are slices of hardwood material applied to worksurfaces, storage units, and panel skins that provide beautiful character and depth from naturally occurring grain patterns.

These veneers have established pricing (wood price group 1) and have been pretested and preapproved on select Steelcase product lines. The result is an enhanced level of materials choice that is also easy to order. Colors can be ordered using standard finish codes, but may have extended leadtimes.

· **Composite veneers** are an engineered veneer intended to create consistent grain patterns and characteristics.

Tip: Known for their color consistency, composite veneers feature a clear coat finish applied in the finishing process. Because the veneers are sourced in large lots, overall color within a specific purchase order should have minimal color inconsistency. However, composite customers should know that colors may vary slightly from dye lot to dye lot. This inconsistency may be noticed when replacement pieces are ordered that may be from different dye lots, or when a new project phase is installed. Also note that composite veneers tend to fade and lighten overtime, especially with sun exposure.

Select Surfaces Ordering Information

Ordering Information

Ordering Select Surfaces – Textiles

Fabrics available through Select Surfaces may have extended leadtimes. To specify a Select Surface textile on a product using Hedberg, pick the appropriate grade from your upholstery listing, and enter the corresponding finish in the Product Specification screen:

Textiles

Price Group	Finish Number
1	59DA
2	59DB
3	59DC
4	59DD
5	59DE
6	59DF
7	59DG
8	59DH
9	59DJ
10	59DK

Leather

Price Group	Finish Number
1	59LA
2	59LB

Next, in the Special Fabric Information pop up window, provide the required fabric details, including:
– the fabric vendor code
– the pattern name and number
– the color name and number
– the direction the fabric is to be applied

For a comprehensive list of patterns and price grades that make up the Select Surfaces offering, visit *steelcase. com/surface-materials* under Select Surfaces. Or, visit the finish library at *finishlibrary.steelcase.com* and narrow your search by selecting Select Surfaces in the offering drop down menu.

Ordering Select Surfaces – Casper Cloaking Technology by Designtex

Casper Cloaking Technology by Designtex will have 5-7 days lead-time. The following options are available to order in Hedberg and are approved for use on V.I.A., Privacy Wall, and Glass Selections. The cloaking technology and graphic layer are ordered separately. Please note that both films are sold in linear feet. They are available in two widths: 48" and 56".

Casper Cloaking Technology Layer	CSPCF1
Casper Graphic Film Layer	CSPGF1

Graphic Layer Options

Casper-Big Dot	PF002
Casper-Little Dot	PF003
Casper-Ion	PF004
Casper-Aksel	PF005
Casper-Grid	PF006
Casper-Plus	PF007
Casper-Cell	PF008
Casper-Pixel	PF009
Casper-City Grid	PF010
Casper-Semaphore	PF011
Casper-Sunburst	PF012
Casper-Brush	PF013
Casper-Pinpoint	PF014
Casper-Draft	PF015
Casper-Block	PF016

Graphic Layer Options Exclusively for Steelcase

Casper-Dash for Steelcase	PF017
Casper-Fade for Steelcase	PF018
Casper-Stripe for Steelcase	PF019
Casper-Hatch for Steelcase	PF020
Casper-Brick for Steelcase	PF021
Casper-Triangle for Steelcase	PF022

Tip: To order Casper, you must first set up a new vendor on the vendor master and create a new PO address for decorative films in Hedberg. Please see the Sales and Dealer Guide *for detailed information. Visit* https://village.steelcase.com/docs/DOC–1575.

Ordering Select Surfaces – Solid Surfaces

Solid surface surface allows customers to achieve a design aesthetic different from the more traditional options, providing an integrated top option. The introduction of solid surface consists of a curated color palette. Finishes within this collection may have extended leadtimes. Samples can be ordered through *corian.com*. To order these solid surfaces, enter in the corresponding finish codes:

Price Group	Finish Number	Finish Name
A	2801	Glacier White
A	2873	Linen
A	2875	Bisque
A	2978	Cameo White
A	2979	Silver Grey
B	2972	Antarctica
C	2974	Canvas

An extended collection of Corian solid surfaces is also available as part of the Select Surfaces Program. To order these solid surfaces, enter in the corresponding finish codes.

Price Group	Finish Code
A	29DA
B	29DB
C	29DC
D	29DD

Then enter the solid surface information in the *Special Solid Surface Information* pop up window. If prompted, enter the finish Code **CORIAN0001** based on the solid surface supplier.

These solid surfaces are only available on a select subset of products.
Tip: Additional finishes are available. Please visit finishlibrary. steelcase.com to find product availability as well as finishes available within each price group.

Ordering Select Surfaces – Composite Veneers

Composite veneers may have extended leadtimes. Place your order as you normally would for any other veneer finish, calling out the appropriate finish code. See below for a list of finish codes available through the offering.
Tip: Solid nosings or wood integral pulls are not available for use with composite veneers - specify edge band solutions only. For example, specify Elective Elements' square edge worksurface instead of the solid-nosing waterfall edge.

*Tip: If you desire a stain to be placed on the selected composite, you must use the standard **CUSTOMIZ** request process.*

The following finishes are available through the composite veneer offering:

Composite Veneer Group 1
Composite Flat-Cut Open-Pore

3JDX	FC/OP	Oak Composite
3JJX	FC/OP	Walnut Composite
3LAX	FC/OP	Graphite on Oak Composite
3LCX	FC/OP	Medium Cherry on Cherry Composite

Composite Quarter-Cut Open-Pore

3F8X	QC/OP	European Walnut Composite
3GGX	QC/OP	Zebrano Composite
3HGX	QC/OP	Oak Composite
3HVX	QC/OP	Walnut Composite
3LBX	QC/OP	Clear Walnut on Walnut Composite
3LDX	QC/OP	Natural Walnut on Walnut Composite
3ZNX	QC/OP	Night Cerused Oak Composite

Composite Veneer Group 2
Composite Flat-Cut Open-Pore

3LHX	FC/OP	Espresso on Walnut Composite

Composite Quarter-Cut Open-Pore

3LEX	QC/OP	Desert Oak on Oak Composite
3LGX	QC/OP	Chai on Walnut Composite
3LJX	QC/OP	Ebony on Walnut Composite

Tip: Known for their color consistency, composite veneers feature a clear coat finish applied in the finishing process. Because the veneers are sourced in large lots, overall color within a specific purchase order should have minimal color inconsistency. However, composite customers should know that colors may vary slightly from dye lot to dye lot. This inconsistency may be noticed when replacement pieces are ordered that may be from different dye lots, or when a new project phase is installed. Also note that composite veneers tend to fade and lighten overtime, especially with sun exposure.

Select Surfaces Program

Custom Surfaces Programs

The Steelcase Custom Surface Material Program offers a comprehensive program that is comprised of COM, PerfectMatch paint, Customiz stain, and Open Line Laminate.

Who To Call

This list lets you know who to call when you have questions.

Customer's Own Material

For COM test results, Application Testing Request form, or yardage requirements, visit our custom surface materials website at *steelcase.com/surface-materials* under Custom Surfaces or call 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com, for application and UL approval.

For additional information call 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Testing mailing address
Steelcase, Inc.
Attn: COM Test Lab
Test Request #*
Door 630
901 44th St SE
Grand Rapids, MI 49508
To avoid delays in receiving, please include the test request number on the shipping label.

PerfectMatch Paint

Contact a Steelcase PerfectMatch Paint representative for specific information about this program.

Phone: 616.247.2079
Fax: 616.246.4161

Mailing address
Steelcase Inc.
Attn: PerfectMatch Paint Representative
901 44th Street
Grand Rapids, MI 49508
SCW-08

Customiz Stain Program

Contact a Steelcase Customiz Stain consultant for specific information about this program.

Phone: 616.247.2079

Mailing address
Steelcase Inc.
Customiz Stain Consultant
4100 68th St SE
Caledonia, MI 49316

Canadian dealers, please contact your dealer service representative for the Customiz stain program.

Open Line Laminate

For Open Line laminate test results, application testing, request form, or laminate requirements, visit our website at *steelcase.com/surface-materials* under Custom Surfaces.

For additional information call 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Other Questions

If you have a problem, question, or request, call your local dealer or Steelcase at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com. Outside the U.S.A., Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands, call 616.247.2500.

For information about Steelcase, the name of your nearest Steelcase dealer, or for product literature, call 1.800.333.9939, or visit our website at *steelcase.com.*

Customer's Own Material (COM)

The Customer's Own Material (COM) Program allows customers to select textiles that are not offered through the standard Steelcase Surface Materials Program for use on Steelcase products.

Custom Surface Materials Website

• The custom surface materials website features application test results for all COM, Select Surfaces, Classics, and Inspire Collection fabrics. The website allows you to calculate yardage requirements for most Steelcase and Wood products.
• Access the custom surface materials at *steelcase.com/surface-materials* under Custom Surfaces.

Application Testing/Approval

COM Application Testing or "approved for application" means the COM fabric has been reviewed for manufacturability using the standard manufacturing techniques to achieve acceptable appearance per Steelcase quality standards.

• Confirm that the selected COM has been tested and approved for application on a specific product by checking the custom surface materials website at *steelcase.com/surface-materials* under Custom Surfaces.
• If the COM is approved, you may continue the order process.
• If the COM has failed, you must reselect a fabric.
• If the COM is not listed, Steelcase has not tested that fabric on our products.
• If your material has not been tested, submit a completed COM Application Testing Request form and send test yardage (4.5 yards for seating, 4 yards for vertical surfaces) to:

Steelcase, Inc.
Attn: COM Test Lab
Test Request #*
Door 630
901 44th St SE
Grand Rapids, MI 49508
To avoid delays in receiving, please include the test request number on the shipping label.

• To ensure rapid processing, please use the electronic COM Application Testing Request form found on the custom surface materials website **or** fax a copy of the COM Application Testing Request Form to 616.698.4700.
▶Page 158

All information on the form is required in order to complete testing. COM tests cannot be performed if information is incomplete. Contact your requested fabric vendor for any missing information.
• Test results will be returned (by fax or e-mail) in four working days from receipt of fabric and completed form.

Steelcase reserves the right to reject or reverse any COM approval that does not meet the manufacturing requirements in actual production. COM approval may be rejected or reversed because not all application testing is based on actual production conditions and because some materials vary in fabrication.

UL Approval with COM

COM materials that are approved for application to panel systems might require UL approval after application test approval. UL approval does involve fees and extended leadtimes.

All vertical surface COMs tested and approved with a content of 100% polyester meet a minimum of class C/UL1286. If class A or B fire rating is indicated, a burn test must be performed. All vertical surface COMs with a blended fabric construction require a UL burn test. For further UL information, contact a COM Consultant at 616.475.2426.

COM Yardage Requirements

• For the most accurate yardage requirements, use the calculator found on the custom surface materials website. *Helpful hint: The calculator on the custom surface materials website provides the same yardage requirements used by Steelcase purchasing.*

Yardage requirements will change depending on:
– width of fabric
– fabric repeat
– application direction
– product style number
– quantity of products being manufactured

• Certain fabric treatments and backings require additional yardage or yardage minimums. Please contact the vendor for specific information.

• COM fabric vendors require fabric purchases in half- or full-yard increments, and the Steelcase COM calculator will automatically round all final yardage calculations to the half yard. *Helpful hint: COM leather is calculated by the square foot, but purchased by the hide. The customer is responsible for purchasing the minimum hide requirement.*

Custom Surfaces
Programs

Customer's Own Material (COM), continued

Application Direction

Most textile companies will swatch their fabrics in a warp vertical (woven way, down roll) direction. Some exceptions might be made to address patterns especially with stripes. Typically, when a fabric is swatched in a warp horizontal (railroad or across roll) direction, the direction is noted on the swatch card or fabric sample. If in doubt of a fabric direction, we encourage you to contact the textile vendor for clarification.

SEATING:

Warp Horizontal
(Railroaded)

Warp Vertical
(Woven Way)
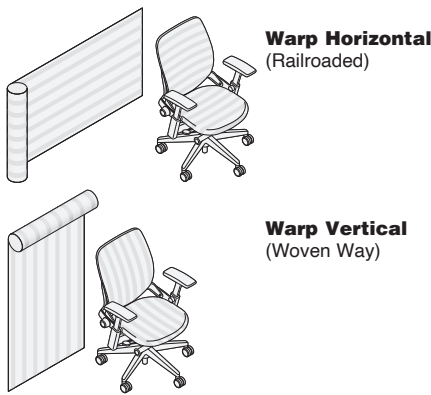

- **Dealers must specify fabric application direction on all COM orders.**
- COMs for seating are most often applied in the warp vertical (woven way, downroll) direction. Some exceptions include patterns with stripes, fabrics that are sampled in the warp horizontal (railroad, across roll) direction, and solid vinyls.
  Tip: COM vinyl requires upholstering in the warp horizontal application direction.
- ▶ See page 169, *Fabric Application Direction Guidelines,* for more information.
  Tip: Please verify the orientation of your fabric with your textile supplier. In many cases, the appearance of the design (horizontal or vertical) is not the same as the warp direction that is standard for the pattern. You can check sampling or the supplier's website for application direction.

VERTICAL SURFACES:

Warp Horizontal

Warp Direction

66" Fabric Width

Warp Vertical

66" Fabric Width
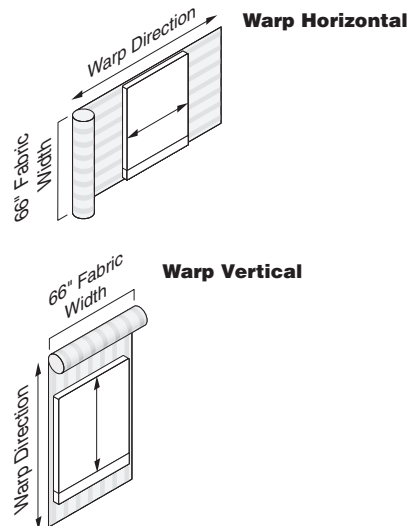

Warp Direction

- **Dealers must specify fabric application direction on all COM orders.**
- The application direction of COMs on vertical surfaces varies by product and sometimes by style number. Please check the custom surface materials website for the approved application direction for your particular COM.
- ▶ See page 171, *Fabric Application Direction for Systems, Casegoods, and Architecture*, for more information.

COM Pricing

- Confirm COM is tested and approved.
- Use the COM or COL (Customer's Own Leather) price group found under Surface Materials Options within each product spec guide.
- Add the cost of the fabric to the COM or COL price group.

How to Order

To order a COM on a Steelcase product:
- Confirm the COM is tested and approved (see Testing/Approval section)
- Use "5999" as the fabric finish number.
- Mark the purchase order with:
  - COM vendor name
  - Pattern name
  - Pattern number
  - Color name
  - Color number
  - Specify application direction (confirm with the customer how they want the fabric to look on the furniture)
    V = warp vertical
       (down roll, woven way)
    H = warp horizontal
       (across roll, railroaded)
- Order will acknowledge with the cost of the COM as a separate line.

Steelcase To Purchase Service

Steelcase will facilitate the ordering, scheduling, and shipment of COMs directly from the supplier. There are no additional charges for this service.

Steelcase is the only party that may purchase COMs for all Steelcase and Steelcase Wood Division products.

Leadtimes

Materials are not stocked by Steelcase; and are available to promise and subject to supplier leadtimes. Additional material processing and leadtimes will apply. Orders with COMs are at risk for production move out due to supplier delays.

COMs are not available through any rushed schedule.

Warranty

COMs are not covered by the Steelcase warranty. Materials specified through our Graded-In and Custom Fabric program are warranted differently by each supplier and do not fall under Steelcase warranty. Additionally, if the material is found to be covered under a supplier's warranty, Steelcase is not responsible for additional costs from replacement products or labor.

COM Notes

Application Direction
▶For application direction information, please see page 156.

Pattern Alignment
Pattern repeat is the measurement, in length and width, of a single unit of repeating pattern. When the pattern repeats itself, you are likely to see horizontal and vertical lines in the fabric applied to a skin. This usually occurs in a fabric where there is a significant pattern. Pattern repeat side by side or top to bottom may not be an exact alignment.

Scrap Disposal
Steelcase is committed to contributing to a healthy environment through our disposal procedures. We reserve the right to choose the most environmentally friendly manner to dispose of all COM scraps without notification.

Steelcase will not issue credit for any differences in yardage between the estimated amount provided and the actual amount ordered and acknowledged.

Contact

For COM test results, Application Test Request form, or yardage requirements, visit the custom surface materials website at *steelcase.com/surface-materials*, under Custom Surfaces.

For additional information call 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Seating COM

- 4.5 yards of material are required for application review on all seating lines.
- Fabric will be cut woven way (down roll/warp vertical), unless otherwise stated:

warp vertical (woven way)

warp horizontal (railroaded)
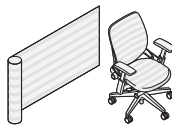

Vertical Surface COM

- Four yards of material are required for application review on all tackboards and panel systems.
- Additional yardage is required to complete UL testing. Please contact a Steelcase COM consultant for details.
- Fabric will be cut warp horizontal (across roll/railroaded), unless otherwise stated:

warp horizontal
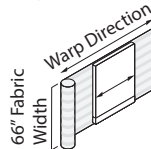

warp vertical

Note: Dealers must specify desired fabric application direction on all COM orders.

Review Time

Application review takes 4 working days upon receipt of the material and this completed request form at Steelcase.

Notification

Requester will be notified of results via fax or email.

Send COM test yardage and this request form to:

Steelcase, Inc.
Attn: COM Test Lab
Test Request #*
Door 630
901 44th St SE
Grand Rapids, MI 49508
To avoid delays in receiving, please include the test request number on the shipping label.

Additional Information

▶See page 155 for complete COM information.

If you have any further questions regarding the Steelcase COM program, contact a Steelcase COM consultant.

- Phone: 616.475.2426 Monday through Friday, 8:00 a.m. to 5:00 p.m. ET
- Fax: 616.698.4700
- Online at *steelcase.com/surface-materials.*

The PerfectMatch program allows customers to specify their own color on Steelcase painted products where the PerfectMatch option is offered.

A dealer P.O. number or accounting reference name is required to initiate the processing of a PerfectMatch request. *Tip: A line item or purchase order does not need to be generated.*

A one-time $500 U.S. per color, per customer registration fee will be invoiced to all requests whether or not an order for product is placed. *Tip: The registration fee is not eligible for discounting.*

The PerfectMatch paint option allows you to order "culled" Steelcase paint finishes, but does not support Steelcase "transitional" paints that are not available on select product lines.

The PerfectMatch program will provide a textured match to a custom textured sample or non-textured Steelcase color in the same surface characteristics and appearance as the current standard Steelcase texture.

All PerfectMatch requests will be matched in a smooth, 40% gloss, non-metallic finish or in a textured, 6% gloss, non-metallic finish. Exceptions: Non-textured V.I.A. and Privacy Wall requests are matched in a 20% gloss level, textured matches with a 6% gloss level.

Metallic paint matches for custom or culled Steelcase colors are not available through the PerfectMatch program, but can be matched in the standard 40% gloss, opaque (non-metallic) finish.

A PerfectMatch paint is not available through any rushed schedule.

The PerfectMatch program is priced at Paint Price Group 3.

The Paint Price Group 3 upcharge applies to all products with the PerfectMatch option selected.

Color Match Request

1. Color Approval
   To initiate a PerfectMatch paint request, go to *steelcase.com/surface-materials,* Custom Surfaces. Select the Custom Programs tab, visit PerfectMatch, and then select Create Request. After processing a request, print a copy of the request and the ID number assigned.
   • Submit the form and send a 2" x 2" representation of the color to be matched to the mailing address below. A color card is recommended, but fabrics, carpets, accessories, or other samples can also be matched.
   Tip: When requesting a culled Steelcase paint color, a sample is not required.
   • Steelcase will invoice for the registration fee of $500 U.S. per customer, per color.
   • For the customer's approval of the match, Steelcase will send a color strike-off to the address indicated on your request. This will be approximately 5 days after the request and the color representation sample has been received.
   Tip: Strike-off samples of culled, smooth, or non-metallic Steelcase paints will be provided upon dealer request.
   Once the customer approves the match, it is the dealer's responsibility to notify Steelcase that the match has been approved in the "Manage My Requests" feature. Upon notification to Steelcase that the match has been approved, the customer will be registered and the special paint finish code will be made available for order entry.

2. PerfectMatch Color Assignment
   • Upon notification to Steelcase that the match has been approved, the customer will be registered and the special paint finish code will be made available for order entry.

3. PerfectMatch Ordering
   • Use the PerfectMatch finish code to place your order.
   • The Paint Price Group 3 upcharge will apply when a PerfectMatch finish code is specified. See the individual product specification guide for the upcharge.

PerfectMatch Paint Notes

Color match from the sample submitted to the actual production will be within commercially accepted tolerances.

The color match from the strike-off to actual production will be within commercially accepted tolerances.

PerfectMatch paint colors are formulated to minimize color shifts under different lighting conditions using a MacBeth "Spectralight III". Particular care should be taken if high-intensity discharge light is used in the installation because it can give the appearance of a mismatch between sample and strike-off. Metallic and Lux paints will be available through PerfectMatch if previously supported in our standard or select paint offering.
Tip: Environmental restrictions may preclude Steelcase from matching or manufacturing certain colors.

Tip: Extended lead times are 15 days for regular paints and 40 days for metallics and Lux paints.

Custom Surfaces
Programs

Customiz Stain

The Customiz stain program allows customers to create their own stain color on Steelcase standard wood veneers and solids. Customiz stain color is available on all product lines that offer wood veneer and solids.

The Customiz stain program is not available through any rushed schedule.

The Customiz stain program consists of three steps: Color Approval, Finish Number Assignment, and Customiz Stain Color Ordering.

Color Approval

- To complete the Customiz stain request form, go to "create test request" at *steelcase.com/surface-materials,* under Custom Surfaces.
- Submit the form and a 5" x 7" sample of the stain color that you are requesting to the mailing address below.
  Tip: When requesting a culled stain color, a sample will not be required.
- Steelcase will invoice a stain matching fee of $500 U.S. per finish, (This one-time fee covers the cost of formulating the Customiz finish and applies regardless of whether or not an order for product is placed.)
- Three (3) color strike-off samples will be sent to the dealer/customer approximately 10 working days after receipt of the request and the sample to match (if required). These samples will require dealer/customer approval.
- Your original color sample will be returned for your strike-off evaluation. Your dealer/customer will be required to email a signed approval form to kklapis1@steelcase.com.

Customiz Stain Pricing

A $500 stain matching fee applies on Customiz requests. This fee covers the cost of formulating the Customiz color finish and applies regardless of whether or not an order for product is placed.

In addition, an approval form must be signed to indicate customer acceptance of Customiz match. This matching fee activates the finish for unlimited use on any Steelcase product (that accepts Customiz) for a 36 month time period. The initiation fees are not discountable.

Finish Number Assignment

- After the color strike-off is approved, the Steelcase Stain Lab will assign a Customiz stain finish number to be used when ordering the product.
- The finish number represents the Customiz stain that has been formulated specifically for the products indicated on the request form. Additional Customiz finishes may need to be developed to apply the same stain color to additional products.

Customiz Stain Color Ordering

- Use Customiz stain finish number to place your order.

Customiz Stain Notes

Wood is a natural material, and variations will occur in color, grain pattern, and character marks. Because of these natural irregularities, each veneer will have its own variation in color, grain structure, and texture. Each tree species has unique qualities, and the way in which the wood is sliced will produce different grain characteristics. Every grain pattern is a one-of-a-kind, unique, and natural design.

Wood will age and lighten or darken as it goes through a natural maturation process. Color changes occur because wood is an organic material. The rate and degree of color change depends on the species of the tree, its growing conditions, and the conditions of the environment it is exposed to after being made into furniture. Direct and constant sunlight (natural or synthetic) will age any wood product.

To ensure an understanding of the color ranges and characteristic variations of natural veneer, this sign-off sheet is required prior to orders being accepted for this clear coat finish.

Custom Surfaces
Programs

Open Line Laminate

The Open Line Laminate (OLL) Program offers the opportunity for customers to select laminates that are not offered through the standard Steelcase laminate offering for use on Steelcase products.

The following products are not available using the OLL process: Seating and Groupwork. Call 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com, for ordering and pricing of laminates on these products.

An additional feature of the OLL Program is the ability to order different edge colors (other than the default edge color specified in the specification guide) for use with standard Steelcase laminates. See below for pricing information for this application.

Application Testing/Approval

To order an OLL on a Steelcase product, first confirm that the selected laminate has been tested and approved for use on a specific product by checking the custom surface materials website at *steelcase.com/ surface-materials,* under Custom Surfaces.

If the laminate is **approved**, you may continue the ordering process. If the laminate has **failed** to meet testing and approval standards, you must choose another laminate. If the laminate is **not listed,** Steelcase has not tested the laminate.

To have your material tested, send the following materials to Steelcase:
• One (1) 4' x 8' sheet of high-pressure decorative laminate that is vertical grade, post formable (VGP), and 0.028" (0.7 mm) thick.
• A completed OLL Testing Request Form Access online at *steelcase.com/ surface-materials,* Custom Surfaces, and select the Custom Programs tab. The test request form can be found under "create test request".
Tip: All information on the form is required in order to complete testing.

Send your laminate materials to:
Steelcase Inc.
Attn: OLL Testing Department
901 44th Street
Grand Rapids, MI 49508

Submit Request

Use the electronic Open Line Laminate Testing Request Form found on the Steelcase custom surface materials website under "create test request" link, or fax a copy of the form to 616.698.4700.

Test Results

Test results will be returned by fax or e-mail in four working days from receipt of laminate and form. Montage laminate tile testing times may vary due to code compliance testing.

Not all testing is based on actual production conditions. Because some laminates vary in fabrication, Steelcase reserves the right to reject any non-standard laminates that do not meet manufacturing requirements, even though the sample passed initial testing.

Application Direction

Open Line laminates are applied to Steelcase products in the Steelcase standard application direction. For directional laminates, each individual specification guide shows the standard application direction for that product. Application in other than standard direction must be processed through Specials Engineering.

Open Line Laminates Square Footage Requirements

To determine how much laminate you will need, access the calculator found on the Steelcase custom surface materials website at *steelcase.com/surface-materials,* under Custom Surfaces. Material estimates will vary depending on the following items:
• Laminate properties
• Laminate directionality
• Sheet sizes offered by the vendor
• Edge type
• Product style number
• Quantity of products being manufactured

Open Line Laminates Pricing

Open Line laminates are available at an additional $111 list per unit, plus the cost of the laminate. The cost of the laminate will not be included and will need to be manually added. This is handled differently on standard product versus Studio Express product, so please read carefully.

Quoting OLL on Standard Product:

Standard* open line laminate from Formica, Nevamar, Pionite, or WilsonArt laminate - the cost of the laminate is $1.13 per square foot. This cost must be manually entered into Hedberg by the dealer and is non-discountable. Start by calculating the number of sheets of laminate required using the COM/OLL Calculator found on srh.steelcase.com.
Example: 1 4'x8' sheet = 32 square feet, 32 SF x $1.13 / SF = $36.16 per sheet

Premium* open line laminate from Formica, Nevamar, Pionite, and WilsonArt - dealer must check with the laminate supplier for the current price per sq ft. This cost must be manually entered into Hedberg by the dealer and is non-discountable.
Example: 1 4'x8' sheet = 32 square feet, 32 SF x $3.05 / SF = $97.60 per sheet

Any open line laminate from a different supplier - dealer must check with the laminate supplier for the current price per sq ft. This cost must be manually entered into Hedberg by the dealer and is non-discountable.
Example: 1 4'x8' sheet = 32 square feet, 32 SF x $10 / SF = $320 per sheet

Quoting OLL on Studio Express Product:

Studio Express products using the Open Line laminate process will be priced at $111 (USD) list per unit plus the cost of laminate.

If you select Formica, Nevamar, Pionite or Wilsonart standard open line laminate to be used on Studio Express products, the cost of the laminate is $46 (USD) per unit. High-Pressure laminate pricing does not include premium or digitally printed patterns from any suppliers. Please note that the $46 cost of laminate per unit charge is not included in the cost of the product during CET/Hedberg specification or AutoPricing. This cost must be manually entered into Hedberg by the dealer - and is non-discountable.

*The laminate manufacturer determines if their finish is considered standard or premium. The OLL calculator will highlight if premium pricing should be considered. NOTE: If a non-Steelcase standard edge band is required, additional charges may apply.

How to Order

Once you have confirmed that the laminate you've selected has been tested and approved, you are ready to place your order.

To order an Open Line laminate on a Steelcase product:
• Mark the purchase order with the
  – Laminate manufacturer,
  – Laminate number, and
  – Laminate description
• Use the appropriate Open Line laminate number (2900).
• Use the appropriate "2C" or "2K" number to indicate the edge color requirements.

Worksurfaces and Montage laminate tiles that do not have edge color defaults based on the laminate:
Orders will be processed using the "2900" order number.

The order is subject to the manufacturer's minimum order requirements. Please contact the laminate supplier for verification of minimum order requirements before ordering.

Steelcase to Purchase Service

The Open Line Laminate Program includes a service to purchase approved Open Line laminates for use on Steelcase products. **Steelcase will facilitate the ordering, scheduling, and shipment of Open Line laminates directly from the suppliers and will apply it to the product.**

Steelcase is the only party that may purchase material. The only time the customer purchases material is for testing purposes.

Leadtimes

Additional leadtimes apply to all orders specifying Open Line laminates.

OLLs are not available through any rushed schedule.

Other Notes

Steelcase is not responsible for overages and will not issue credit for any differences between the estimated amount provided and the actual amount ordered and acknowledged.

Laminate suppliers require laminate to be purchased in full sheets. Steelcase will determine how many sheets are needed and order appropriately.

Contact

For Open Line laminate test results, Application Test Request Form, or square foot requirements, visit the custom surface materials website at *steelcase.com/ surface-materials,* under Custom Surfaces.

For additional information call 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Veneer Cutting and Grain Pattern Guidelines

Veneer Cutting and Grain Patterns:

The cutting method determines the veneer's figure or grain pattern.
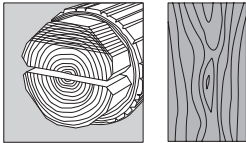

Flat cut
Veneer is cut parallel to the flat side of the cant at a tangent to the growth rings of the tree. This produces a cathedral or oval pattern.
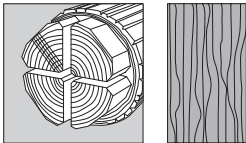

Quarter cut
Veneer is cut from quarter sections of the log, produced by cutting each cant in half. Cutting lines are at an approximate 90° angle to the growth rings at the center of the quarter. This produces a straight grain or ribbon pattern.
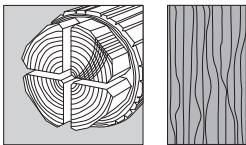

Rift cut
This veneer cut is used specifically for oak, to minimize the appearance of flaking patterns in the grain. Cutting lines are on an arc approximately perpendicular to the growth rings. This produces a comb-like straight grain or ribbon pattern.

Fabric Application Direction Guidelines

What is the issue?

Some textiles are simple and look the same regardless of how you apply them to a product. Many other fabrics are patterned, textured, or have luster that will have a distinctly different appearance if applied in different directions on chairs or panels. Because of these differences, and the fact that there are limits to how some fabrics can be applied to Steelcase products, it is important to understand fabric application direction standards at Steelcase in order to avoid being disappointed.

Talking about direction

Fabrics come on rolls. The long yarns that run down the length of the roll are called the "warp" yarns. These yarns are used to define the direction you are viewing the fabric as it is applied to a panel or chair. Fabric directionality is determined by how the fabric comes off the roll. It is NOT determined by the way the pattern looks on the product (i.e., horizontal stripes do not mean the fabric was applied warp horizontal—it could have been applied warp vertical).
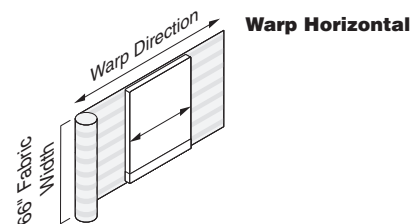

Warp Horizontal

In the example below, the fabric is applied warp horizontal although the stripes appear vertical.
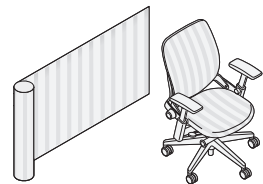

Warp horizontal application is the standard application direction for most Steelcase fabrics on Steelcase panel and seating products. Horizontal application means that as you view the panel or chair in its upright position, the warp yarns of the fabric are running in the horizontal direction.
▶See page 172, *Fabric Application Direction for Systems, Casegoods, and Architecture* matrix, for details on these exceptions.
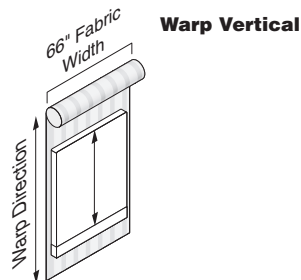

Warp Vertical

Warp vertical application is the standard application direction for any panels taller than 68"H and a few other exceptions. Vertical application means that as you view the panel or chair in its upright position, the warp yarns are running in the vertical direction.
▶See page 172, *Fabric Application Direction for Systems, Casegoods, and Architecture* matrix, for details on these exceptions.
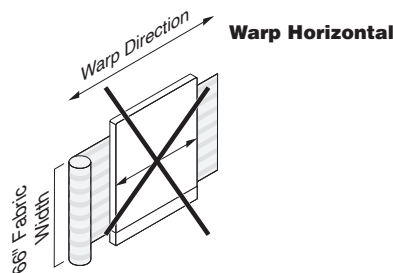

Warp Horizontal

Fabric on panels taller than 68"H cannot be applied warp horizontal because the height of the product is greater than the width of the fabric.
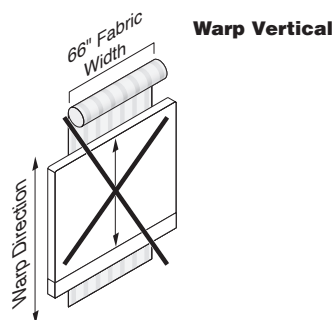

Warp Vertical

Fabric on panels wider than 68"W cannot be applied warp vertical because the width of the product is greater than the width of the fabric.

Steelcase is not responsible for charges associated with replacement or reupholstery of products due to incorrect specifications.
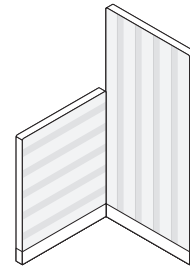

The combination of tall panels (75"H with warp vertical) with short panels (65"H or less with warp horizontal) will result in the fabric patterns running in opposite directions.

To remedy this situation, the following options are available:

• Use non-directional fabric. Only a small selection of fabrics are non-directional.
• Use fabrics that have standard warp vertical application direction.
• Specify warp vertical application on fabrics that are standard warp horizontal.
Tip: If you require warp vertical and it is not the standard, you must specify the warp vertical option on every line in the order.

Warp Horizontal
(Railroaded)

Railroaded means the same thing as *warp horizontal* and is often used when talking about chairs. *Across roll* is another term for running the fabric in this direction.

Warp Vertical
(Woven Way)

Woven way means the same thing as *warp vertical* and is often used when talking about chairs. *Down roll* is another term for running the fabric in this direction.

What determines fabric direction?

Standard default directions exist for all products. You may specify a fabric to be cut in a specific direction if the product allows it to be applied. The purchase order must clearly state the application direction if it is other than standard. Refer to the following tables for the standard directions.

Tip: If you are changing the application direction of fabric, yardage requirements may increase resulting in an additional upcharge. This upcharge will be applied to the purchase order.

Structural panels, tackboards, and tiles have standard Steelcase vertical surface fabrics applied warp vertical or warp horizontal, depending on the fabric.

▶See page 169 for the standard directions.

Why do dealers have to specify fabric application direction?

Sometimes COM fabrics have patterns that look awkward or inappropriate if they are applied in the standard direction. Therefore, it is critical to know how the pattern is run on the roll to ensure that Steelcase builds and ships each order to the customer's expectation. Some examples are shown here.

Incorrect?   Correct?

Incorrect?   Correct?

Incorrect?   Correct?

Incorrect?   Correct?

• Steelcase does not know which way your customer wants to see these patterns on their furniture.

• Dealers must specify application direction on all COM orders.

Swatch directions

All Steelcase fabric swatches and samples are shown in the warp horizontal direction. If you hold any fabric sample in the orientation shown below, the fabric will be in the warp-horizontal direction.
Swatch card
Memo sample

To see how a fabric will look if it is applied warp vertical, turn it 90°.

Tip: Fabric direction on samples from COM vendors may vary by product. Most textile companies will swatch their fabrics in a warp vertical (woven way, down roll) direction. Some exceptions might be made to address patterns especially with stripes. Typically, when a fabric is swatched in a warp horizontal (railroad or across roll) direction, the direction is noted on the swatch card or fabric sample. If in doubt of a fabric direction, we encourage you to contact the textile vendor for clarification.

Fabric Application Direction for Systems, Casegoods, and Architecture

Fabric	Standard Application Direction	Tips
Steelcase Textiles	Varies by fabric	▶See page 172, *Fabric Application Direction for Systems, Casegoods, and Architecture* matrix.
Select Surfaces-Designtex	Varies by fabric **Dealers must specify desired fabric application direction on all select surfaces orders.**	Test results may impose exceptions. Confirm test results and application direction on COM website and *Designtex.com* prior to ordering.
COM Fabrics	Varies by fabric **Dealers must specify desired fabric application direction on all COM orders.**	Test results may impose exceptions. Confirm test results and application direction on COM website prior to entering COM orders.

Fabric Application Direction for Seating

Fabric	Standard Application Direction	Tips
Steelcase Textiles Upholstery	Railroaded (warp horizontal)	SILQ 418 Series will only take warped vertical fabrics. This includes all Standard Steelcase fabrics, Select Surfaces, and COMs.
Select Surfaces-Designtex	Varies by fabric **Dealers must specify desired fabric application direction on all select surfaces orders.**	Confirm test results and application direction on COM website and *Designtex.com* prior to ordering.
Select Surfaces-Gabriel	Varies by fabric **Dealers must specify desired fabric application direction on all select surfaces orders.**	Confirm test results and application direction on COM website and *Gabriel.dk* prior to ordering.
Select Surfaces-Kvadrat	Varies by fabric **Dealers must specify desired fabric application direction on all select surfaces orders.**	Confirm test results and application direction on COM website and *Kvadrat.dk* prior to ordering.
COM Fabrics	Varies by fabric **Dealers must specify desired fabric application direction on all COM orders.**	The most common COM application direction for seating is warp vertical. Confirm test results and application direction on COM website and your textile vendor's site prior to entering COM orders.
COM Vinyls	Varies by fabric **Dealers must specify desired fabric application direction on all COM orders.**	Most solid vinyls are commonly applied in the warp horizontal application direction.

* Only available for Answer, Montage, and Kick segmented surfaces up to 48"H. Maximum width for all panels is 48" when applied vertically. These statements apply to both Steelcase and COM fabric.

Tip: Steelcase and COM fabric that is 54"W cannot be applied to Kick or Answer skins that are 53"H or higher.
Tip: For more detailed product information, refer to individual product line specification guides.

Excluded and Transitional Surface Materials

What are Excluded Surface Materials?

Excluded surface materials include popular hard surfaces and textiles from previous Steelcase surface materials programs. These surface materials are available to customers that have standardized on these finishes.

Finishes in the Excluded category may not be available across all materials or product lines. Please refer to the product specification guides for availability by product.

What are Transitional Surface Materials?

This *Transitional* section contains surface materials that are being **maintained for existing customers only** and are likely to be phased out over time. It is expected that each of these Transitional items will enter the existing deletion process when and if a decision is made to discontinue production. These surface materials are indicated with a ⊤. Surface materials that have a specific culling date are indicated with an ⊠, followed by the last order entry date. Please review the most recent culling announcement for materials identified for deletion as well as suggested alternative finishes. **New customers or existing customers with new projects should be selecting other surface materials.**

The idea is to give you—our customers, designers, specifiers, and dealers—additional time to prepare for change. With this kind of advance notice, we'll be able to help you:
– make smooth transitions to alternative selections
– avoid selections that may be phased out over time
– be more informed and confident about the long-term plans for our surface materials

Resources—
The Fine Print

The Fine Print contains information you might want to know (but is not necessarily required to specify).

Cleaning and Care of Surface Materials

For the most up-to-date resources pertaining to cleaning your products, please refer to *https://www.steelcase.com/cleaning-steelcase-products/.*

Sustainable Cleaning Solutions

A variety of companies and groups assert that their cleaning products are better for humans and the environment than others. Steelcase has not evaluated all of these claims, but believes that Green Seal (www. greenseal.org) is one good source for identifying sustainable cleaning solutions. Green Seal is an independent nonprofit organization with experience in certifying products and services that are sustainable. When searching the site, use GS-37 as the life cycle-based sustainability standard.

Vertical Surface Fabrics and Seating Upholstery

Remove as much soil or staining material as possible by carefully vacuuming, brushing, or scraping with a dull instrument.

Cleaning codes apply only to the outer part of your fabric. Do not over-wet the fabric! If you do, you may damage the upholstery's filling materials. Special finishes or laminations, such as a protective coating (e.g., C-1™) or a flame-retardant treatment, may modify a fabric's cleaning code due to the adhesive type used in lamination (e.g., "WS" code may change to "S" or "W" code).

W – Clean only with water-based shampoo or foam upholstery cleaner. (Water-based cleaning agents are often sold as upholstery shampoo. They are usually sold as foams, concentrated liquids, and dry compounds. Do not over wet. Do not use dry cleaning solvents. Pile fabric may require brushing to restore its appearance. Remove cushion covers to launder.

S – Clean only with dry cleaning solvent. Do not saturate. Do not use water. Remove cushion covers to launder.

WS – Clean with a mild detergent shampoo, foam, or dry cleaning solvents. Do not saturate with liquids. Pile fabric may require brushing to restore its appearance. Remove cushion covers to launder.

X – Do not clean with either water or solvent-based cleaner. Use only vacuuming or light brushing.

Cleaning Code W
Follow these directions for removing water-borne, non-greasy soil or stains (such as coffee, milk, soft drinks, fruit juices, washable ink, etc.):
1 Gently apply a water-based cleaner, that is specifically made for cleaning fabric, to the soiled area using a clean cloth or sponge, such as an upholstery shampoo.
2 Work the cleaner into a lather or foam, if possible, to minimize soaking the fabric. Using light brushing motions, work from the outside of the soiled area toward the center to prevent rings.
3 Allow fabric to dry completely, then vacuum thoroughly.

Cleaning Code S
Follow these directions for removing oil-borne soil or stains (such as salad dressing, grease, lipstick, ball-point ink, etc.):
1 Gently apply a dry-cleaning fluid to the soiled area using a dampened, clean cloth or soft-bristle brush.
2 Using quick, light, rubbing or brushing strokes, work from the outside of the soiled area toward the center to prevent rings. Avoid soaking the fabric.
3 Gently blot with a clean, absorbent cloth to soak up and remove dampened soil.
4 Allow fabric to dry completely, then vacuum thoroughly.

Large Areas
When large fabric areas must be cleaned, such as complete panels, it is recommended that you employ a professional cleaning firm that uses a dry-foam upholstery shampoo and an immediate wet pick-up vacuum system, that does not exceed 170F.

Do not steam clean or use other methods that soak or heat the fabric.

Regular and proper maintenance of your upholstery fabric permits less frequent cleaning.

Maintenance is routine, on-going care which reduces soil buildup on a fabric's surface. Maintenance also includes treating spots and stains promptly.

Vacuum regularly with a proper upholstery attachment to remove air-borne dust and lint thoroughly.

Clean periodically to remove accumulated grime and retain the fabric's original appearance as much as possible.

Clean protective arm covers and head rests so they do not look different from the rest of your upholstery. Promptly treat spots and stains. (An International Fabricare study confirmed the detrimental effects of allowing stains to age, when they could have been successfully removed, if treated immediately. After one week, 20% of stains could not be removed. After 3 weeks, 50% of stains could not be removed. If stain has oxidized, or totally hardened, it forms an insoluble product that cannot be removed). Turn and rotate loose cushions to equalize wear and soiling.

Leather Upholstery

Dusting with a clean, dry cloth is the recommended routine cleaning method for an aniline-dyed, full-grain leather. For spots and spills, wipe excess liquid immediately and let air dry. If necessary, use lukewarm water and mild non-detergent soap, work into a thin lather with a soft cloth, rinse with clean water, and buff to restore luster. The use of any other product could cause reactions with the solvent-free chemicals used in the tanning process.

Part of leather's unique appeal is the sophisticated aging process that occurs over time. Soft, comfort wrinkles can appear upon use and are considered common. Comfort wrinkles are a normal characteristic of leather and are part of the natural qualities and softness that leather provides. Leather has naturally occurring markings from the everyday activities of an animal's life and as a result, some of these markings can show on an upholstered chair. These markings are what give each chair unique character and premium quality.

Polyurethane Upholstery

For regular maintenance, use lukewarm water and mild soap to remove most soil and stain. Do not over-saturate the material with water.

For stubborn stains, remove as much soil or staining from the material as possible by carefully vacuuming or brushing with a dull instrument. Lift most stains with an alcohol-based cleaner. Thoroughly rinse all cleaning solution residue with water and let air dry. To remove ballpoint pen, address the stain immediately by wiping with isopropyl alcohol (rubbing alcohol). Not all ink stains can be removed.

Never use furniture polishes, oils, solvents, varnishes, abrasive cleaners, or solutions of ammonia and water on polyurethane.

Vinyl Upholstery

Clean the soiled area with mild soap and water; then rinse with fresh water and wipe dry with clean cloth. For more difficult stains, wipe affected area with a soft cloth or soft bristle brush using a non-abrasive cleaner, for example, Formula 409 or Fantastik. Rinse with fresh water and wipe dry.

Never use furniture polish, oils, varnishes, abrasive cleaners or ammonia. Isopropyl Alcohol (70%) can be used to remove the most difficult stains that cannot be removed with soap and water. It is important to rinse the cleaned area with fresh water after applying the alcohol solution.

Acrylic

Dust with a soft, damp cloth or chamois. Clean only with mild soap, detergent and water, or Pledge. **Do not** use window-cleaning fluids, scouring compounds, gritty cloths, leaded or ethyl gasolines, or strong solvents such as alcohol, acetone, carbon tetrachloride, etc. To remove tar, grease, paint, etc., use naphtha or kerosene. Rinse well and dry with a soft, damp cloth or chamois. Polish acrylic by applying a thin, even coating of automobile paste wax with a soft cloth. Do not use a clean-er-wax combination. Remove minor surface scratches by waxing. Remove deeper scratches by sanding lightly with 400-grit, "wet or dry" sandpaper and buffing with a clean, muslin wheel dressed with a good grade of fine-grit buffing compound. A ¼" electric drill with a 4" buffing wheel has sufficient RPMs. Buff lightly with a clean cotton flannel or jersey cloth.

Avoid aromatic solvents and abrasives. Acrylic is combustible, so observe fire and safety procedures appropriate for compatible forms of wood. Do not expose to excessive heat or flame.

PET

To clean a PET surface, begin by gently brushing and vacuuming to see if the stain material can be removed, and if not follow our method for cleaning seat cushions (see video tutorial *https://www.steelcase.com/cleaning-steelcase-products/#how-to-sani-tize-your-steelcase-products*) using a mild detergent solution and a wet vac. Blotting a porous surface like PET is generally not successful as the stain and cleaning agent needs to be lifted out of the material.

Markerboard Writing Surfaces

Use dry erase markers only. Remove dry-erase markings with a markerboard eraser or soft cloth as often as possible. Change erasers, as they become dirty. Dirty erasers will leave ink residue on the surface.

For daily cleaning, or as needed, use a dry erase cleaner, or a non-abrasive household cleaner, such as glass cleaner. This may be done with a soft cloth or sponge. Dry the surface with a soft cloth prior to writing. All markings should be removed weekly.

Caution:

· Do not use permanent markers on marker-board surfaces. In the event a permanent marker is used, removal of markings may be attempted by using dry erase cleaner, or by writing over the marking with a dry erase marker and erasing with a marker-board eraser or soft cloth.

· Do not use abrasive cleaners or solvent type cleaning solutions, such as Ketones (Acetone, MEK, etc.) lacquer thinner, nail polish remover, etc. because they may remove the finish from the markerboard surface.

Cleaning Instructions for Answer Markerboard Skins:

1 Use clean dry eraser or microfiber cloth to remove as much ink as possible.

2 Use Expo cleaner or other markerboard cleaner with microfiber cloth. If the markerboards are used daily, cleaning may be required 2-3 times a week.

3 For heavily used boards and persistent markings, clean with 91% Isopropyl Alcohol (IPA) with a microfiber cloth. It is recommended that the markerboard skins be cleaned with 91% IPA once a week. *Tip: Use of household cleaners on Answer markerboard skins is not recommended.*

Worksurfaces and Finishes

For all laminate tops, painted and plated metals, and plastics

Wiping with a damp cloth will remove general soiling and water-borne stains. If needed, use a hard-surface, all purpose cleaner such as Formula 409, Fantastic, Top Job, or Mr. Clean. Follow the manufacturer's instructions for general purpose cleaning. To prevent staining, ink should be removed as soon as possible. Do not use paint thinners, naphtha, or solvent-based fluids.To fill scratches in woodgrain laminate tops, use an oak, walnut, or mahogany putty stick which can be purchased at paint supply and hardware stores.

Clean metal finishes with a non-abrasive cleaner. Apply the cleaner sparingly, making sure that it does not come into contact with any wood surface. Wipe the hardware dry with a clean, soft cloth.

Protecting Wood Surfaces

Use desk pads and coasters to help protect the finish against dents, scratches, moisture and hot and cold liquids. Do not use desk pads that have plastic backing. Use felt or leather pads on the bottoms of office equipment and accessories. Periodically move desk accessories and other objects kept on the worksurface to ensure even aging. Lift objects when you move them, instead of pulling or pushing them across the surface, to avoid scratching the surface. Avoid leaving vinyl binders on worksurface for long periods. If you use a protective glass top, insert felt pads between the glass and the worksurface, to create an air space and allow the wood to breathe. Keep your furniture away from direct sunlight. Avoid extreme temperatures and humidity. Maintain temperatures between 60 and 80 degrees Fahrenheit and humidity levels between 30 and 50 percent.

Cleaning Wood Surfaces

Keep a supply of soft, clean, absorbent cloths handy for wiping up spills and regular dusting. To dust, wipe with a slightly damp, soft cloth, using another soft cloth to dry. Always wipe the surface in the direction of the woodgrain. Use a quality cleaner or flax soap formulated especially for use on wood surfaces. Do not use oils or ammonia. Dilute the cleaner as directed by the manufacturer. Dampen but do not saturate a soft cloth with the diluted cleaning solution. Wipe the surface in the direction of the woodgrain to remove dirt and fingerprints. Wipe the surface clean with a soft, dry cloth. Quality spray wax may be applied sparingly twice a year. Excessive waxing may result in a wax build-up which feels sticky and attracts an unusual amount of dirt. For information about how to remove this wax, contact your facilities department or Steelcase dealer. Wood is a "forgiving" material which can usually be repaired. If your worksurface is damaged, call your facilities department or Steelcase dealer.

Maintenance Contract

Many Steelcase dealers offer maintenance contracts for your convenience. Contact your dealer for more information.

Fabric Treatment

Soil Retardant—Steelcase Surfaces

Soil retardants are treatments that provide long-term soil and stain resistance to a fabric without affecting the shade or integrity of the fabric.

The following Steelcase Textiles are available pre-treated with soil retardant. (You do not need to select the soil retardant option for these fabrics and incur an upcharge.)
Jacks
Link
Spyder

Soil retardant treatment is available on other Steelcase seating fabrics at an additional upcharge. To order this option, please select "Soil Retardant Treatment" under "Optional Accessories". For soil retardant availability, see the *Seating Upholstery Technical Information.*
▶

Soil Retardant—Select Surfaces

For soil retardant treatment on Designtex patterns in the Select Surfaces offering, go to the Designtex section at *steelcase.com/ surface-materials,* under Select Surfaces.

Soil Retardant—COM

For soil retardant treatment on COMs, please select "Soil Retardant Treatment" under "Optional Accessories." Minimums or additional yardage may be required. Please contact the vendor directly for specific information. Extended leadtimes may be necessary for this service.

Contact

For Steelcase fabrics, contact your Steelcase Sales Service representative at 1.888. STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com. For Designtex fabrics, contact your local Designtex sales representative at 1.800.221.1540.

Who To Call

This list lets you know who to call when you have questions concerning specific programs:

Steelcase Textiles Cut Yardage

Contact a Steelcase Textiles cut yardage administrator for the following information regarding the purchase of Steelcase Textiles by the yard: (cut yardage is available for purchase in full yard increments only)
• Ordering procedures

Phone: 616.475.2426

Questions regarding your cut yardage purchase orders should be asked of your Steelcase SFT Representative.

Designtex

Contact Designtex for the following information:
• Samples of Designtex fabrics
• Designtex products
Phone: 1.800.221.1540
            212.886.8179
Web: *Designtex.com*

Mailing address
Designtex
New York, NY
200 Hudson Street
9th Floor
New York, NY 10013
212.886.8100
info@designtex.com

Gabriel

Contact Gabriel for the following information:
• Samples of Gabriel fabrics
• Gabriel products
Phone: +45.9630.3100
Web:
http://www.gabriel.dk/textiles/steelcase_select/

Kvadrat

Contact Kvadrat for the following information:
• Samples of Kvadrat fabrics
• Kvadrat products
Phone: +45.8953.1831
Web: *www.kvadrat.dk*
Email: Marianne Ankjaer Nielsen at man@kvadrat.org

Fabric Treatment

Contact your Steelcase Sales Service Representative:
Phone: 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Other Questions

If you have a problem, question, or request, call your local dealer or Steelcase at 1.888. STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com, for immediate action by people who want to help you. Outside the U.S.A., Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands, call 616.247.2500. For information about Steelcase, the name of your nearest Steelcase dealer, or for product literature, call 1.800.333.9939, or visit our website at *steelcase.com*.

Steelcase Textiles Cut Yardage Program

Steelcase Textiles are available for purchase by the yard, in addition to being ordered on Steelcase products. All orders can be placed through Hedberg.
The most current dealer/price list can be found on *village.Steelcase.com* under Surface Materials Program, Textiles.

Ordering Procedure

When Placing an Order

Please provide the following information to place an order:
- Specify fabric part number and color number from the SCY catalog
- Yardage required (Fabric is sold only in full yard increments. Leather is sold by the square foot.)

Order Information

Dealer prices are your net cost. This price list gives the approximate size of the repeat. Allowance for slight variations should be made when calculating yardage require-ments. Discontinued items not appearing in this price list may still be in stock in limited quantities. Larger orders may be available on a special order basis. Selected fabrics and/or leathers are sold on a non-cancelable basis.

Shipping Information

Cut yardage orders are dependent on inventory volumes, so leadtime will vary. If stock is available, your cut yardage order will ship in a 10 day leadtime, observing a service parts schedule. Please check order status on the Village for shipping information or use Webtracks. There is no freight cost for cut yardage orders unless specific shipping terms are requested.

Terms and Conditions

Terms are 1% per 15 days, net 30 days. No discounts are allowed on freight or sales taxes. If you order has been cut or shipped, cancellations cannot be accepted. Subse-quent restocking charges of up to 35% are applicable on all cancellations or returns. It is the customer's responsibility to determine code compliance confirmation if a product is ultimately used in a way other than it was originally intended to be used by Steelcase Textiles (e.g., upholstery fabric used as a wallcovering).

Returns

No returns will be accepted without a written authorization. All claims must be submitted via LASER. Claims will not be accepted on any merchandise which has been cut or processed in any way by the purchaser or purchaser's agent. Claims for reasons other than Steelcase Textiles' responsibility, if accepted, are subject to a restocking charge of 35%. The party returning the product is responsible for arranging the return of the product and all associated freight costs. Leather orders are non-cancelable and hides cannot be returned. Credit will not be issued unless the fabric is received within 30 days of the date of written authorization. Under no circumstances will cuts of less than 10 yards be accepted for return.

Canadian Pricing

The Canadian Dealer prices listed are in Canadian dollars, and are all inclusive. These prices include freight, duty, and brokerage fees.

Contact

International Destinations

Orders destined for ports of embarkation or for destinations outside Canada or the United States, please contact Steelcase International at:
Phone: 616.246.4700
Fax: 616.246.4040

Resources—
The Fine Print

Glossary

Words in bold type are also defined in the glossary.

Abrasion resistance
The ability of a textile or other surface material to withstand rubbing and abrasion without loss of original color or other physical properties.

Abrasion tests
Tests performed on surface materials, usually textiles, to determine their resistance to rubbing, abrasion, scuffing and other forms of wear. Steelcase textiles are tested with the Wyzenbeek and Taber abrasion tests.
▶Page 130

Absorbency
A measurement of a textile's ability to absorb liquid, in terms of both the amount that can be absorbed and the rate of absorption.

Across roll pattern cutting
When a fabric is used horizontally from the roll for pattern cutting.

Anti-microbial
Having the ability to inhibit the growth of, or destroy, microorganisms.

Application direction
The direction the fabric will appear once applied to Steelcase products (i.e., warp vertical or warp horizontal).

Backing
A material or coating on the back of a textile that reduces fraying, **raveling** or slippage and helps the textile retain its shape.

COM or Customer's Own Material
Steelcase chairs may be ordered with any special fabric of the customer's choice that meets basic requirements of size and manufacturing applicability.
▶Page 155

Commercial match
A match or slight variation from product to product. This means that production materials may vary slightly in color, texture, and finish.

Composite veneer
An engineered veneer intended to create consistent grain patterns and characteristics.

Crêpe
A woven textile without a visible **pattern repeat** that has a pebbled or grained surface.

Crocking
The transfer of color or dyes from one surface to another by abrasion.

Crossover
The availability of a color in different surface materials (or commodities); also the availability of a color or a surface material on different product lines.

Customiz
Customiz is a program that allows the customer to create a unique color on a specific surface material.

Custom color
A color created in a surface material to meet a customer's specific needs. Only certain surface materials can be custom colored.
▶Page 160

Cutting direction
The way pattern pieces are cut from a roll of fabric (i.e., vertically or horizontally across the roll).
▶Page 169

**Cut yardage program
(Steelcase Textiles)**
Steelcase fabrics can be purchased for use in refurbishing, coordination with other furnishings in an environment of products, or application to competitive products through the Steelcase Textiles program.
▶Page 183

Dobby pattern
A woven textile with a small-scale **pattern** produced on a dobby loom.

Down-roll pattern cutting
The fabric is used vertically from the roll for pattern cutting with selvages left and right. The fabric is used in the direction that it is woven. The same as **woven way** or **warp vertical**.

Edge band
Material applied to the edge of a table or worksurface.

Fabric treatment
Application of chemicals to a textile surface to improve stain resistance, fire retardancy, abrasion resistance, or other characteristics.
▶Page 181

Filling (weft)
The horizontal threads of a woven fabric.

Fire resistance
The ability of a material to resist ignition and burning when exposed to flame.

Fire retardant chemical
Chemical or chemical compound for which a functional use is to resist or inhibit the spread of fire that is present in any covered product.

Flat cut or flat sliced
A veneer cutting technique that produces a **cathedral grain** pattern. A simple method of making flat, level cuts through the lengths of the veneer log.

Grade level
Another term for **price group.** Steelcase textiles are available in a range of grade levels.

Grain
A description of patterns made in veneer by the wood fibers. Patterns are created by the direction, size, arrangement, color contrast, and quality of the fibers.

Hand
A description of the way a textile feels to the touch and the way it drapes.

Hue
A description of a color's classification such as red, orange, yellow, green, blue, or violet.

Jacquard weave
A textile produced on a jacquard loom. This loom permits each warp thread to be manipulated independently, allowing it to produce textiles with a broad variety of weave patterns and designs.

Laminates
Durable materials that are applied to worksurfaces in order to achieve a smooth surface for a variety of tasks. Laminates can be applied to several surfaces in the office environment.

Lightfastness
The ability of a color to remain true and unfaded after exposure to light.

Memo
A 7" x 8" surface material textile sample.

Natural veneer
Veneer that comes directly from the unprocessed log. Grain patterns are the result of natural tree growth.

Palette
A given range or a set of colors developed for a specific purpose.

Pattern
A design that is woven into the structure of the textile or applied after weaving by dyeing or printing.

Pattern repeat
The measurement, in length and width, of a single unit of a repeating pattern.

PerfectMatch
A program that allows the customer to create a custom paint color for Steelcase products.
▶ Page 159

Piece dye
The process used to dye fabric after it is woven.

Pilling
A form of textile wear in which abraded fibers roll up and appear as small balls on the surface of the textile.

Plain weave
A textile produced using the simplest weave formation. A one up one down warp and filling weave arrangement creates a very simple, plain fabric.

Price group
All Steelcase fabrics are arranged in price groups. They range from price group one through price group ten. Price group one is the least expensive and price group ten the most. The price group of a fabric is based on the cost to manufacture it.

Quarter cut
A veneer cutting technique that produces a straight grain pattern.

Railroaded pattern cutting
When the roll of fabric is horizontal for cutting, with selvages at the top and bottom. If you think of railroad tracks, the selvages represent the long rails, and the ties represent the width of the fabric.

Rift cut
A veneer cutting technique that produces a comb-like straight grain pattern.

Seating upholstery, seating textiles, and seating fabrics
Textiles and other materials that are appropriate for use on seating, including both woven and non-woven (leather and vinyl) upholstery.

Soil retardant treatment
A coating or other treatment applied to a fabric to improve soil and stain resistance.
▶ Page 181

Solid laminate
Laminate that is a single color without a pattern.

Speckle laminate
Laminates with a subtle, random pattern made up of tiny dots of color in varying color values.

Strength
The ability of a textile or yarn to withstand stress without breaking.

Surface material
Any material that can be specified for application to Steelcase products in order to achieve an aesthetic effect. Steelcase surface materials include paint, laminate, wood, vertical surface fabrics, seating upholstery, systems plastics, seating plastics, seating coating, metals, and other finishes.

Surface Materials Binder Set
Binders containing surface material specification tools. The set includes the Hard Surfaces, Steelcase Textiles Vertical Surface Fabrics, and Steelcase Textiles Seating upholstery Binders.

Swatch
A sample of a surface material that is used as a specification tool and/or on presentation boards.

Taber
A test that establishes whether textiles meet or exceed industry standards for wear. The Taber Abrasion test is used for both seating upholstery fabrics and vertical surface fabrics. The test measurement is given in cycles, which indicate how many abrasive revolutions can be applied to the fabric before the first yarn bundles, or fibers, begin to break. Steelcase fabrics are tested with both the Taber test and the **Wyzenbeek** test to meet all industry standards.
▶ Page 130

Textile
A material that can be used as seating upholstery or for vertical surface applications. In the Steelcase Surface Materials Program the words textile and fabric are used interchangeably.
3" x 3" sample
A three inch square sample of a hard surface material that can be used for specification or on presentation boards.

Transitional category
Transitional surface materials are being maintained for existing customers and are likely to be phased out over time.

Tweed
A woven textile characterized by mixed colors and a textured surface caused by the novelty yarns used to make tweed fabrics.

Twill
A woven textile with a distinct diagonal pattern.

Ultraviolet (UV) stability
The fade-resistance of a textile or finish.

Value
The relative lightness or darkness of a color.

Veneer
A thin layer of fine wood that is used as the outer surface material to achieve a wood effect.

Vertical surface fabric
A fabric suitable for use on furniture panels and other vertical surfaces, such as tackboards.

Warp
The vertical threads of a woven fabric.

Weaving
The process of making textiles using a loom. **Filling** (horizontal) threads are run over and under warp (vertical) threads to make a length of woven textile. **Patterns** can be created by using the yarns in different sequences.

Weight
Measurement of textile weight is given in ounces per linear yard and represents the weight of one linear yard of fabric expressed in ounces.

Woodgrain laminates
Laminates that duplicate the colors and patterns of wood veneer.

Woolen
Yarns characterized by bulkiness and softness, created by spinning fibers together using the woolen spinning system.

Worsted
Yarns characterized by smooth surfaces and luster, created by spinning together long fibers using the worsted spinning system.

Wyzenbeek
A test that establishes whether textiles meet or exceed industry standards for wear. The Wyzenbeek Abrasion test is primarily for seating upholstery fabrics, but it can also be used to test vertical surface fabrics. The test measurement is given in double rubs, which indicate how many abrasions can be applied to the fabric before it begins to show loose threads or other signs of obvious wear. Steelcase fabrics are tested with both this method and the **Taber** Abrasion test, to meet all industry standards.
▶Page 130

Yarn
Fibers twisted (plied) into a single, continuous thread.

Yarn dyeing
The dyeing of yarns before weaving, which makes it possible to create multicolored textiles.
