CHOPVALUE

The Bassline Sustainable Top Collaboration

Steelcase is committed to creating products that support a better planet. The Bassline table system exemplifies this with its ability to be customized and reused overtime, as well as its base construction which is made from highly recyclable steel. Building on this foundation, we've collaborated with ChopValue, Cambium and Azure Furniture to offer a program that empowers you to source a sustainable top for your Bassline table – or even customize it with your own materials – creating a unique solution for any workspace.

Sustainable Choices

Steelcase chose to collaborate with ChopValue, Azure and Cambium because of our similar commitments to the planet and their alignment with our significant areas of impact: design for circularity, choose and use responsibly, and reduce carbon. Each company creates unique tabletops that celebrate the sustainable practices of responsibly sourcing and diverting wood waste streams (including discarded chopsticks, pest-infested wood and fallen urban trees), potentially resulting in lower carbon emissions and ultimately perpetuating the circular economy.

COLLECTIVE SUSTAINABLE IMPACTS

Cambium Carbon Smart Wood™

45+ million tons of urban tree waste are generated every year in the United States. Most end up mulched, burned or sent to landfills. Cambium turns these fallen trees into Carbon Smart Wood™, a valuable material that supports local communities, creates jobs and fights climate change.

ChopValue

130 million pairs of chopsticks are used globally each day. Encapsulating circularity, ChopValue products are made from urban harvesting these under-utilized resources and manufactured locally in their North American Microfactories. The result is an innovative, wood alternative that does not compromise on sustainability, quality or design.

Azure

Creating good from a bad situation, Azure Furniture has been finding new solutions for neglected wood. Trees are frequently attacked and killed by pests, and they pose a threat for forest fires and become health hazards. Azure sources this wood, often with beautiful patterns from the infestation, to craft unique furniture pieces for customers.

Steelcase Bassline Table Base

Unleash the full potential of your workspace with the Steelcase Bassline table. This innovative platform boasts a weight capacity of up to 800 pounds, empowering you to design a truly custom workspace. Whether you envision a reclaimed wood slab or the timeless character of your grandfather's workbench top, Bassline makes it possible.
